Practice questions for GCSE Mathematics from 2010

GCSE Mathematics A, Mathematics B, Applications of Mathematics and Methods in Mathematics

This document consists of past papers for OCR’s GCSE Additional Mathematics pilot specification (J915) and may be useful in teaching the new OCR GCSE Mathematics and Linked Pair pilot specifications from September 2010.
OCR’s innovative GCSE Additional Mathematics pilot specification (J915) has proved hugely popular with centres and was fully subscribed with 10,000 learners taking the papers in summer 2008 and 2009.

The GCSE Additional Mathematics papers include questions in the style of new Assessment Objective 3, which requires candidates to “Interpret and analyse problems and generate strategies to solve them.” (AO3 in Methods in Mathematics also includes mathematical reasoning.)

GCSE Additional Mathematics is assessed by a single paper covering all grades from G to A*. Each part of a question is designed to build on the previous parts and step up in demand. The intention is that learners of all abilities can attempt at least a part of each question and that the final parts of some questions will provide a suitable challenge for the most able mathematicians.

Taken as a whole, these papers therefore have a different style and ‘feel’ to papers for the new Mathematics and Linked Pair pilot specifications and are not indicative of the style of the new specifications’ papers. However it is anticipated that teachers will find individual questions interesting and useful classroom resources in preparing students to tackle problem solving questions in Mathematics.

The following series of question papers and mark schemes are available.
June 2007
January 2008
June 2008
January 2009
June 2009

Please use the PDF bookmarks to navigate to each paper or mark scheme.

As pilot centres are still preparing learners for GCSE Additional Mathematics examinations (the specification runs until January 2012) the most recent papers have not been included so that these can continue to be used as mock examinations. However further papers and mark schemes will be added to this booklet in the future.

We hope you find this resource useful.
GENERAL CERTIFICATE OF SECONDARY EDUCATION
GCSE LEVEL 1/2 IN ADDITIONAL MATHEMATICS

FRIDAY 29 JUNE 2007

Morning

Time: 2 hours

Candidates answer on the question paper.
Additional materials: Electronic calculator
Geometrical instruments
Tracing paper (optional)

INSTRUCTIONS TO CANDIDATES

- Write your name, centre number and candidate number in the boxes above.
- Answer all the questions.
- Use blue or black ink. Pencil may be used for graphs and diagrams only.
- Read each question carefully and make sure you know what you have to do before starting your answer.
- Show your working. Marks may be given for working that shows that you know how to solve the problem even if you get the answer wrong.
- You are expected to use an electronic calculator for this paper.
- Final answers should be rounded to an appropriate degree of accuracy.
- Do not write in the bar code.
- Do not write outside the box bordering each page.
- WRITE YOUR ANSWER TO EACH QUESTION IN THE SPACE PROVIDED. ANSWERS WRITTEN ELSEWHERE WILL NOT BE MARKED.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [ ] at the end of each question or part question.
- The total number of marks for this paper is 100.
- Unless otherwise instructed in the question, take π to be 3.142 or use the π button on your calculator.

This document consists of 20 printed pages.
Area of trapezium = \( \frac{1}{2} (a + b)h \)

Volume of prism = (area of cross-section) x length

In any triangle \( ABC \)

Sine rule \( \frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C} \)

Cosine rule \( a^2 = b^2 + c^2 - 2bc \cos A \)

Area of triangle = \( \frac{1}{2} ab \sin C \)

Volume of sphere = \( \frac{4}{3} \pi r^3 \)

Surface area of sphere = \( 4 \pi r^2 \)

Volume of cone = \( \frac{1}{3} \pi r^2 h \)

Curved surface area of cone = \( \pi rl \)

The Quadratic Equation
The solutions of \( ax^2 + bx + c = 0 \), where \( a \neq 0 \), are given by

\[
x = \frac{-b \pm \sqrt{(b^2 - 4ac)}}{2a}
\]
1 (a) Jo has the following nine coins in her purse.

\[
10\text{p} \hspace{0.5cm} 1\text{p} \hspace{0.5cm} 2\text{p} \hspace{0.5cm} 50\text{p} \hspace{0.5cm} 10\text{p} \hspace{0.5cm} 1\text{p} \hspace{0.5cm} 20\text{p} \hspace{0.5cm} 2\text{p} \hspace{0.5cm} 1\text{p}
\]

(i) Work out the median.

(a)(i) ___________________________ p [2]

(ii) Write down the range.

(ii) ___________________________ p [1]

(b) Twenty people emptied their pockets and counted the number of coins they had.
The frequency table shows the data.

<table>
<thead>
<tr>
<th>Number of coins</th>
<th>Frequency</th>

<tr>
<td>10</td>
<td>4</td>
</tr>
<tr>
<td>15</td>
<td>2</td>
</tr>
</tbody>
</table>

Work out the mean.

(b) ___________________________ [3]
(c) Peta and Chloe each carried out a survey on the amount of money that students, aged 16, spent during one month.

There were 180 students in each survey.

Peta drew this pie chart to show her results.

Chloe drew this cumulative frequency diagram to show her results.
Find a similarity and a difference in the results of the two surveys.

Use calculations to justify your answers.

Similarity: _________________________________________________________________
_________________________________________________________________________

Difference: _________________________________________________________________
_________________________________________________________________________
_________________________________________________________________________
The table shows some nutritional information for 100 g of each of these cereals.

<table>
<thead>
<tr>
<th></th>
<th>Nutty Crunch</th>
<th>Fibre Plus</th>
</tr>
</thead>
<tbody>
<tr>
<td>energy kJ</td>
<td>1661</td>
<td>1548</td>
</tr>
<tr>
<td>sugar g</td>
<td>35</td>
<td>24</td>
</tr>
<tr>
<td>salt g</td>
<td>1.15</td>
<td>1.5</td>
</tr>
<tr>
<td>iron mg</td>
<td>7.9</td>
<td>8.8</td>
</tr>
</tbody>
</table>

(a) In a 100 g serving

(i) which cereal supplies more energy,

(a)(i) ____________________________[1]

(ii) how many more kilojoules (kJ) of energy does it supply?

(ii) ____________________________[2]

(b) Nutty Crunch is supplied in 40 g packets, Fibre Plus in 50 g packets.

(i) How much sugar (in grams) does a 50 g Fibre Plus packet contain?

(b)(i) ____________________________ g [1]
(ii) A 40 g packet of Nutty Crunch contains more sugar than a 50 g packet of Fibre Plus: how much more? Give your answer in grams.

(ii) ___________________________ g [3]

(iii) A packet of Fibre Plus contains more salt than a packet of Nutty Crunch: how much more? Give your answer in grams.

(iii) ___________________________ g [4]

(c) 100 g of Nutty Crunch provides 55% of the recommended daily allowance of iron. 100 g of Fibre Plus provides 65% of the recommended daily allowance of iron.

Calculate the recommended daily allowance of iron.

(c) ___________________________mg [4]
3  (a) The diagram shows a car’s speedometer.

(i) What is the speed of this car in miles per hour?

(a)(i) ____________________ mph [1]

(ii) The speed limit is 70 miles per hour.

Approximately, what is this in kilometres per hour?

(ii) ____________________ km/h [1]

(iii) Convert 250 km/h to miles per hour.

(iii) ____________________ mph [2]

(b) A car travels a distance of 920 metres in 1 minute.

Work out the average speed of the car in kilometres per hour.

(b) ____________________ km/h [3]
The propeller on a Red Bull racer turns 50 times each second. The tip of the propeller is travelling at 340 m/s, the speed of sound.

Calculate the radius, $r$, of the propeller.

(c) ________________ m [5]

______________________________________________________________________________
4  (a) Here is a sequence of multiples of 3.

3  6  9  12  15  _____  _____

Write down the next two numbers in the sequence.  

ALL the sequences in the rest of this question start with a positive whole number and use this rule to work out the numbers.

Look at the last number recorded:
- if it is a multiple of 3, divide it by 3;
- if it is not a multiple of 3, add 2.

(b) One sequence starts as follows.

17  19  21  7  _____  _____  _____  _____

17 is not a multiple of 3 so we add 2, getting 19.

21 is a multiple of 3 so we divide by 3, getting 7.

(i) Write down the next four numbers in the sequence.  

(ii) Write down the 100th number in the sequence. Explain how you decided.

___________________ because  __________________________________________
___________________________________________________________________

(c) Another sequence starts with 10 and uses the same rule as before.

Find the 100th number in this sequence.

(c) ________________________
(d) The second number in another sequence is 7.

Find both the possible starting numbers.

(e) In this question $k$ is a positive integer.

Give your answers to the following in terms of $k$, simplifying expressions where possible.

(i) The first term of one of these sequences is $3k$; find the next term.

(ii) The first term of another of these sequences is $3k + 1$; find the next two terms.

(iii) The first term of a further one of these sequences is $3k + 2$; find the next three terms.
5  (a) 

(i) Find the area of this L-shape.

(a)(i) ______________________ cm$^2$ [1]

(ii) On the grid, draw a square with the same area as the L-shape. [1]

(b) (i) Calculate the area of this square.

(b)(i) ______________________ cm$^2$ [2]

(ii) Calculate the area of this circle.

(ii) ______________________ cm$^2$ [2]
Sam cut a circle, of radius $r$ cm, into quarters. She arranged the quarter circles and glued them onto paper to make this face of an alien.

Find, in terms of $r$, the total area of the alien's face.

(c) \[ \text{_________________________ cm}^2 \] [5]
Peter has a bag of 10 marbles.
There are 3 green marbles in the bag.

Peter chooses a marble at random from the bag.
Write down the probability that Peter chooses a green marble.

(a) ________________ [1]

Sally has a bag of marbles.
Some of the marbles are orange; the rest are purple.

The probability of choosing an orange marble at random from the bag is \( \frac{1}{5} \).

Sally doubles the number of orange marbles in the bag, without changing the number of purple marbles.

Work out the new probability of choosing an orange marble at random from the bag.

(b) ________________ [3]
(c) Reuben has a bag of marbles.
The marbles are red, yellow or blue.
There are 8 blue marbles in the bag, \(x\) red marbles and \(y\) yellow marbles.
The probability of choosing a red marble at random is 0.4.

(i) Show that \(3x - 2y = 16\). [3]

(ii) Reuben triples the number of yellow marbles in the bag, without changing the number of red and blue marbles.
The new probability of choosing a yellow marble at random is 0.6.

Find the values of \(x\) and \(y\).

(c)(ii) \(x = \underline{\hspace{2cm}}\) \(y = \underline{\hspace{2cm}}\) [5]
7 (a) Here is the formula for working out a gas bill.

\[
\text{Total bill} = \text{number of units used} \times \text{rate per unit.}
\]

The rate per unit is 2.25 pence per unit.

Find the total bill when 3924 units are used.

(a) £ _____________________________ [2]

(b) (i) Evaluate \(a - 2b - 8c\) when \(a = 28\), \(b = 5\) and \(c = \frac{3}{4}\).

(b)(i) _____________________________ [1]

(ii) Evaluate \(4x + 3y\) when \(x = 35\) and \(y = -12\).

(ii) _____________________________ [1]

(c) Write down an expression for the total cost of \(x\) computers at £473 each and \(y\) printers at £72 each.

(c) £ _____________________________ [2]
(d) The table shows the number of articles available on an Internet encyclopaedia site. The data are for 1st January each year from 2003 to 2007.

<table>
<thead>
<tr>
<th>Date</th>
<th>2003</th>
<th>2004</th>
<th>2005</th>
<th>2006</th>
<th>2007</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time from January 2003 (t years)</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
</tr>
<tr>
<td>Number of articles ($N_t$)</td>
<td>11000</td>
<td>23000</td>
<td>49000</td>
<td>102000</td>
<td>215000</td>
</tr>
<tr>
<td>$\frac{N_t}{N_{t-1}}$</td>
<td>2.09</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(i) Explain why $\frac{N_t}{N_0}$ is approximately 2.09.

(ii) Complete the last row of the table and explain how this shows that the growth is approximately exponential.

(iii) Estimate (to the nearest thousand) the number of articles available on this site on 1st January 2008.

(d)(iii) ___________________________ [1]

(iv) Find an approximate formula for $N_t$ in terms of $t$.

(iv) $N_t = ___________________________ [2]
(i) Write down the coordinates of the point P.

(a)(i) (_____ , _____)[1]

(ii) Plot the point Q (3, 4).

(b) Translate the triangle by vector \( \begin{pmatrix} 1 \\ -2 \end{pmatrix} \).
(c) Vectors $a$ and $b$ are such that

- $a \neq b$,
- $a + b$ and $a - b$ are two vectors equal in magnitude.

Show that the vectors $a$ and $b$ are perpendicular. [5]

</table>

**M1**: 1661 – 1548 attempted

**DM1**: cand’s 14 – (b)(i) provided ans > 0

**M1**: 35 × 0.4 or ÷2.5 (= 14) Condone ×40

**DM1**: cand’s 0.75 – cand’s 0.46

**SC3**: 13.5 or 14.4 or 13.9(…)

**M1**: 0.55 or 0.65 soi

eg ×100÷55 or ×55÷100

**DM1A1**: 7.9/0.55 = 14.3(…)

or 8.8/0.65 = 13.5(3…)

**Alternative approaches**:  
① 55% = 7.9 & 65% = 8.8 so 120% = 16.7  
leads to **M1**: 1.2 soi (as above)  
**DM1A1**: 16.7÷1.20 = 13.9(…)=14  
② 55% = 7.9 & 65% = 8.8 so 10% = 0.9  
leads to **B4**: 9 (must be supported)  
or part marks as above  
or **M1**: 8.8 + multiples (or steps) of 0.9  
**DM1A1A1**: 8.8 + 3.5 × 0.9 = 11.9(5) =12  
(Sim. for 7.9 + 4.5 × 0.9 = 11.9(5) =12)

The total entry for the examination was 6279.

Statistics are correct at the time of publication.
INSTRUCTIONS TO CANDIDATES

- Write your name in capital letters, your Centre Number and Candidate Number in the boxes above.
- Use blue or black ink. Pencil may be used for graphs and diagrams only.
- Read each question carefully and make sure that you know what you have to do before starting your answer.
- Show your working. Marks may be given for a correct method even if the answer is incorrect.
- Final answers should be rounded to an appropriate degree of accuracy.
- Answer all the questions.
- Do not write in the bar codes.
- Do not write outside the box bordering each page.
- Write your answer to each question in the space provided.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [ ] at the end of each question or part question.
- The total number of marks for this paper is 100.
- You are expected to use an electronic calculator for this paper.
- Use the π button on your calculator or take π to be 3.142 unless the question says otherwise.

FOR EXAMINER’S USE

This document consists of 20 printed pages.
Area of trapezium $= \frac{1}{2} (a + b)h$

Volume of prism $= (\text{area of cross-section}) \times \text{length}$

In any triangle $ABC$

Sine rule $\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$

Cosine rule $a^2 = b^2 + c^2 - 2bc \cos A$
Area of triangle $= \frac{1}{2} ab \sin C$

Volume of sphere $= \frac{4}{3} \pi r^3$
Surface area of sphere $= 4\pi r^2$

Volume of cone $= \frac{1}{3} \pi r^2 h$
Curved surface area of cone $= \pi rl$

The Quadratic Equation
The solutions of $ax^2 + bx + c = 0$, where $a \neq 0$, are given by

$$x = \frac{-b \pm \sqrt{(b^2 - 4ac)}}{2a}$$
1 (a) Two ways are in common use when quoting the fuel consumption of a car.

<table>
<thead>
<tr>
<th>miles per gallon</th>
<th>litres per 100 kilometres</th>
</tr>
</thead>
</table>

The graph shows the relationship between them.

(i) Change 40 miles per gallon into litres per 100 km.

(a)(i) ________________ litres/100 km [1]

(ii) Change 17.5 litres per 100 km into miles per gallon.

(ii) ________________ miles/gallon [1]
(b) (i) Write down the coordinates of the point labelled P on the grid below.

(b)(i) \((\text{_______}, \text{_______})\) [1]

(ii) Find the equation of the straight line PQ.

(ii) ______________________________ [3]

(iii) Complete the table of values for the equation \(y = 27 + 3x - 2x^2\).

<table>
<thead>
<tr>
<th>(x)</th>
<th>-3</th>
<th>-2</th>
<th>-1</th>
<th>0</th>

</tbody>
</table>
(iv) On the grid for part (b)(i) draw the graph of \( y = 27 + 3x - 2x^2 \) for values of \( x \) from \(-3\) to \(4\). [2]

(v) Write down the \( x \)-coordinates of the points where the line PQ intersects this curve.

(v) \( \text{____________ , ___________} \) [2]

(vi) The \( x \)-coordinates you found in part (b)(v) are the solution of a quadratic equation.

Write down that equation.
You are not required to simplify the equation.

(vi) \( \text{____________________________} \) [1]

2 (a) Estimate the area of this leaf. It is shown on a 1 cm square grid.

(a) \( \text{________________________} \) cm\(^2\) [2]

(b) Under each solid write its mathematical name.

(b) \( \text{________________________} \) \( \text{________________________} \) [2]
The diagram shows a jar of marmalade and its label.

The label is a rectangle, ABCD, 6.5 cm tall; it fits exactly round the cylindrical jar. The diameter of the jar is 7.5 cm.

Calculate the length of

(i) DC,

(ii) the diagonal, AC, of the label.

(c) The diagram shows a jar of marmalade and its label.

(i) __________________________ cm [2]

(ii) __________________________ cm [3]
(d) The picture shows a wire toast rack.

It consists of 7 loops of a cylindrical spiral, uniformly spread out. The base of the toast rack is 14.7 cm long. The diameter of the spiral is 7.5 cm. At each end of the spiral there is a straight, horizontal section of length 5 cm.

Calculate the total length of the wire, making your method clear.
(a) Reuben, an entertainer, invites Jeremy and Mary to play *The Number Game* by following these six instructions.

1. Select any whole number between 2 and 9
2. Multiply this number by 2
3. Add 5
4. Multiply the answer by 50
5. If you have already had your birthday this year add 1758; if you haven’t, add 1757
6. Now subtract the four-digit year that you were born

Jeremy was born on 6th February 1991 and is playing the game on 11th January 2008. He selects 6 as his response to instruction 1.

(i) Find the number that Jeremy should obtain when he has worked through all six instructions.

(a)(i) ________________ [3]

Mary was born on 5th January; she is also playing the game on 11th January 2008. She uses \( n \) for her response to instruction 1.

(ii) Find, in terms of \( n \), what Mary’s answer should be when she has worked through the first five instructions.
Simplify your answer.

(ii) ________________ [3]
Reuben claims that the correct answer to instruction 6 has these properties:

- the first digit is the number the player first thought of;
- the last two digits are the player's age.

(iii) Using your answer to part (ii), explain why Reuben's claims are usually correct for those who have already had their birthday this year. [2]

There are some players for whom Reuben's claims are wrong. 

(iv) How old are these players?

(iv) ________________ [1]

(b) Simon's birthday is on 1st January. 
Sometime in the future the square of his age (in completed years) will be equal to the 4-digit year number. 

Find how old Simon is now. 
You may use trial and improvement.

(b) ________________ years [3]
A farmer recorded the number of days in January that the temperature fell below freezing. These are his results for the last 10 years.

9 12 15 12 10 10 16 13 15 15

(i) Calculate the mean of these data.

(ii) Write down the modal value.

The diagram shows the UK mean temperature (in degrees Celsius) for each of the 93 years from 1914 to 2006 inclusive; the median and quartiles for these data are also shown.

(i) What does the diagram show about UK mean temperatures? Give details to justify your answer.

_____________________________________________________________________
___________________________________________________________________
This diagram shows the same data, together with the 5-year and 25-year moving averages.

(ii) Describe any trends you see, giving relevant dates.

_____________________________________________________________________
_____________________________________________________________________
_____________________________________________________________________
_____________________________________________________________________[2]

(iii) Explain why the 25-year moving averages produce the smoother graph.

_____________________________________________________________________
_____________________________________________________________________[1]

(c) Daryl uses 7-day and 21-day moving averages to predict changes in share prices.

State one advantage and one disadvantage of using the 21-day moving averages rather than the 7-day moving averages when predicting changes in share prices.

Advantage: _____________________________________________________________
_____________________________________________________________________

Disadvantage: ___________________________________________________________
_____________________________________________________________________[2]
Here is the formula for working out Billie’s wage.
She is paid £5.45 per hour.

\[
\text{Total wage} = \text{number of hours worked} \times \text{pay per hour} + \text{bonus}
\]

Find her total wage when she worked 32 hours and is due a bonus of £27.50.

(a) £ ______________________________ [2]

(b) Use the formula \( v = 63 - 6t \) to find \( v \) when \( t = 7 \).

(b) ______________________________ [2]

(c) Solve.

(i) \( 5c + 17 = 38 \)

(c)(i) ______________________________ [2]

(ii) \( 4(2d - 5) = 48 \)

(ii) ______________________________ [3]
(d) Write down an expression for the total cost (in pounds) of

c clarinets at £119 each
and d drum kits at £153 each.

(d) £ ______________________________[2]

(e) Simplify.

(i) $p^3 \times p$

(ii) $\frac{z^2 - 5z}{z^2 - 25}$

(e)(i) ______________________________[1]

(ii) ______________________________[3]
6 This question is about letters posted on Mondays.

They may be posted 1st class or 2nd class.
They are never delivered on Monday.
They are all delivered on or before Friday of that week.
The day a letter is delivered is independent of the day on which any other letter is delivered.

The table shows possible delivery days and some of their probabilities.

<table>
<thead>
<tr>
<th>Delivered on</th>
<th>1st class letter</th>
<th>2nd class letter</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tuesday</td>
<td>0.8</td>
<td>0.1</td>
</tr>
<tr>
<td>Wednesday</td>
<td>0.15</td>
<td>0.6</td>
</tr>
<tr>
<td>Thursday</td>
<td>0.05</td>
<td>0.2</td>
</tr>
<tr>
<td>Friday</td>
<td>0</td>
<td></td>
</tr>
</tbody>
</table>

(a) The table shows the probability that a 1st class letter is delivered on Friday is 0.

Explain briefly what this means.
_______________________________________________________________________[1]

(b) Work out the probability that a 2nd class letter is delivered on Friday.

(b) ______________________________[2]

(c) Two letters are posted on Monday, one 1st class, the other 2nd class.

Work out the probability that the 1st class letter is delivered on Thursday and the 2nd class letter on Thursday or Friday.

(c) ______________________________[3]
(d) Two letters are posted on Monday, one 1st class, the other 2nd class.

Work out the probability that the 2nd class letter is delivered on any day before the 1st class letter.
7 The diagram shows a regular octagon ABCDEFGH, with centre O.

(a) Draw all the lines of symmetry that pass through vertices of the octagon. [2]

(b) Show working to explain why

(i) angle AOB = 45°, [1]

(ii) angle ABC = 135°. [2]

(c) (i) Calculate the area of the octagon when OA = 5 cm.

(c)(i) __________________________ cm² [3]
The two diagrams show circles each with radius 5 cm. One diagram also shows the largest regular octagon that just fits inside the circle. The other diagram also shows the smallest regular octagon that just contains the circle.

By considering the areas of the circles and the octagons, show that

\[ 2.82 < \pi < 3.32 \]
A hospital treats Gill with a drug. This formula is used to calculate the dose.

\[
\begin{array}{c}
\text{Body surface area (m}^2) \\
\times 60 \\
\rightarrow \\
\text{Dose (mg)}
\end{array}
\]

Calculate the dose for Gill who has a body surface area of 1.75 m\(^2\).

(a) __________________________ mg [2]

(b) The drug is mixed in saline to make 1 litre of mixture which is given to Gill at a steady rate. At this rate it takes 2 hours to give Gill 1 litre of the mixture. Gill has received 0.68 litres.

How long will it take for Gill to receive the rest of the mixture? Give your answer to the nearest minute.

(b) ______________________ minutes [3]
(c) Some hospitals use the formula

$$A = 0.007184h^{0.725}m^{0.425}$$

to estimate $A$, the body surface area of a patient in square metres, where the patient is $h$ cm tall and weighs $m$ kg.

(i) The formula for body surface area was developed in 1916 from data obtained in a survey of 9 individuals of varying age, shape and size.

Make two comments on the survey from which this formula was developed.

1  ____________________________________________________________________
   ____________________________________________________________________

2  ____________________________________________________________________
   ____________________________________________________________________[2]

(ii) Use the formula to calculate the value of $A$ for a patient who is 162 cm tall and weighs 65 kg.

(c)(ii) __________________________ m$^2$ [1]

(iii) By changing 0.425 into a fraction, express $m^{0.425}$ in the form $\frac{a}{\sqrt{b}}$ where $a$ and $b$ are whole numbers with no common factors.

(iii) ______________________________ [3]

(iv) The formula is sometimes expressed in the alternative form

$$A = cH^{0.725}m^{0.425}$$

where $c$ is a constant, the patient is $H$ metres tall and weighs $m$ kilograms and again $A$ is the body surface area in square metres.

Find the value of $c$.

(iv) ______________________________[2]
Mark Schemes for the Component

January 2008
OCR (Oxford, Cambridge and RSA Examinations) is a unitary awarding body, established by the University of Cambridge Local Examinations Syndicate and the RSA Examinations Board in January 1998. OCR provides a full range of GCSE, A level, GNVQ, Key Skills and other qualifications for schools and colleges in the United Kingdom, including those previously provided by MEG and OCEAC. It is also responsible for developing new syllabuses to meet national requirements and the needs of students and teachers.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners’ meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates’ scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

For a description of how UMS marks are calculated see:  
[http://www.ocr.org.uk/learners/ums_results.html](http://www.ocr.org.uk/learners/ums_results.html)

Statistics are correct at the time of publication.
INSTRUCTIONS TO CANDIDATES

- Write your name in capital letters, your Centre Number and Candidate Number in the boxes above.
- Use blue or black ink. Pencil may be used for graphs and diagrams only.
- Read each question carefully and make sure that you know what you have to do before starting your answer.
- Show your working. Marks may be given for a correct method even if the answer is incorrect.
- Final answers should be rounded to an appropriate degree of accuracy.
- Answer all the questions.
- Do not write in the bar codes.
- Write your answer to each question in the space provided.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [ ] at the end of each question or part question.
- The total number of marks for this paper is 100.
- You are expected to use an electronic calculator for this paper.
- Use the π button on your calculator or take π to be 3.142 unless the question says otherwise.
Area of trapezium = \( \frac{1}{2} (a + b)h \)

Volume of prism = (area of cross-section) x length

In any triangle ABC
Sine rule \( \frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C} \)

Cosine rule \( a^2 = b^2 + c^2 - 2bc \cos A \)
Area of triangle = \( \frac{1}{2} ab \sin C \)

Volume of sphere = \( \frac{4}{3} \pi r^3 \)
Surface area of sphere = \( 4 \pi r^2 \)

Volume of cone = \( \frac{1}{3} \pi r^2 h \)
Curved surface area of cone = \( \pi rl \)

The Quadratic Equation
The solutions of \( ax^2 + bx + c = 0 \), where \( a \neq 0 \), are given by
\[
x = \frac{-b \pm \sqrt{(b^2 - 4ac)}}{2a}
\]
1  (a) A clock strikes once at one o’clock, twice at two o’clock, and so on. It also strikes once at half past each hour.

How many times altogether does this clock strike in 12 hours?

(b) John starts his computer counting 1, 2, 3, …  Each number takes 1 second to count.

How many years does it take for the computer to get to 1 billion (1 000 000 000)?

(a) ___________________________  [4]

(b) _____________________________ [5]
Toronto uses Eastern Standard Time (EST).
EST is 5 hours behind British Summer Time (BST).
For example: 15:00 BST is 10:00 EST.

A flight leaves London on Wednesday at 15:15 BST and arrives in Toronto at 18:00 EST the same day.
A tail wind means the return flight to London takes one hour less time.
The return flight leaves Toronto on Wednesday at 20:25 EST.

When does it arrive in London?
Give your answer as BST.
Two identical triangles PQR and P’Q’R’ are shown below, drawn on a rectangular piece of paper.

Folding the paper along the line UV maps P to P’, Q to Q’ and R to R’. The line UV meets the line PP’ at X, the midpoint of PP’.

(i) What else do you know about the lines UV and PP’?

(ii) Describe the single transformation that maps triangle PQR onto triangle P’Q’R’.

(a)(i) _______________________________ [1]

(ii) _______________________________ [2]
(b) The diagram shows parallel lines, m and n, and a flag labelled F.

(i) Measure the perpendicular distance between the two lines, m and n.

(b)(i) __________________________ cm [1]

(ii) Draw the reflection of flag F in line m. [2]

(iii) Give a full description of the single transformation that is equivalent to reflection in line m followed by reflection in line n.

(iii) ____________________________________________

___________________________________________________________________

___________________________________________________________________ [5]
3  (a) These two formulae each give the flow rate for blood passing through our arteries, in appropriate units.

| Flow rate = 70 \times \text{heart rate} | Flow rate = \frac{1000}{\text{resistance}} |

(i) Work out the flow rate when the heart rate is 80.

(a)(i) _______________________________ [1]

(ii) Work out the flow rate when the resistance is 0.2.

(ii) _______________________________ [1]

(iii) Work out the heart rate when the flow rate is 4200.

(iii) _______________________________ [2]

(iv) How would the flow rate change when the heart rate is doubled?

(iv) ____________________________________________________________ [1]

(v) How would the flow rate change when the resistance is doubled?

(v) ____________________________________________________________ [1]
(b) (i) Explain what is meant by $r^4$. 

(b)(i) ______________________________________________________________ [1]

(ii) Blood flows at a rate of $Q$ cm$^3$/s through a blood vessel.

The formula for $Q$ is $Q = \frac{\pi r^4 P}{8L V}$, where

- $L$ is the length of the blood vessel in centimetres,
- $P$ is the pressure difference (in Pascals) along the length of the blood vessel,
- $r$ is the radius of the blood vessel in centimetres,
- $V$ is the viscosity (or thickness) of the blood in Pascal seconds.

Calculate the rate of flow of blood in a blood vessel of length 0.5 cm, and radius 0.0015 cm, given that the pressure difference along the blood vessel is 6650 Pascals, and the blood has viscosity 0.005 Pascal seconds.

(ii) __________________________ cm$^3$/s [2]

(iii) The sketch graphs represent

$$Q = ar^4, \quad Q = bP \quad \text{and} \quad Q = \frac{c}{L},$$

where $a$, $b$ and $c$ are constants.

Match each graph to its equation.

(iii) Graph ① ____________________________

Graph ② ____________________________

Graph ③ ____________________________ [3]
Write down the largest and smallest 3-digit numbers you can make using all these digits.

(a)(i) Largest: _________ ; smallest: _________ [2]

(ii) Subtract your smallest number from your largest number.

(ii) ___________________________ [1]

(iii) Using the three digits from your answer to part (ii) repeat parts (i) and (ii). Continue doing this until you keep obtaining the same 3-digit number. Write down that number.

(iii) ___________________________ [3]
(b) Ian chose $p$, $q$ and $r$ as his three digits. Explain why one of the 3-digit numbers he can make using these digits may be written as

$$100q + 10r + p.$$ [2]

(c) Show that the answer to part (a)(ii) will always be a multiple of 99 no matter what three digits (all different) you start with in part (a)(i). [4]
5  (a) All the faces of a 3 by 3 by 3 solid cube are painted. It is then cut, as shown, into 27 unit cubes, each cube being 1 by 1 by 1.

Some of the unit cubes have 0 painted faces, some have 1 painted face, and so on.

Complete the table to show how many unit cubes there are of each type.

<table>
<thead>
<tr>
<th>Number of painted faces</th>
<th>Number of unit cubes</th>

</tbody>
</table>

Source: The Environment Agency

(a) The average number of closures before 2000 is less than the average number of closures since then.

Write down two other ways in which the data collected before 2000 differs from the data collected since then.

1. _______________________________________________________________________

________________________________________________________________________

2. _______________________________________________________________________

______________________________________________________________________  [2]
(b) A log book is kept for each of the years 1983 to 2006 inclusive.

(i) Jack picks one of these log books at random.

Find the probability that the log book belongs to the period 2000 to 2006 inclusive.

(ii) Freddie randomly chooses two log books from the period before 2000.

Find the probability that the Barrier was closed more than twice in both of those years.

(c) For the period 1983 to 1999 the mean number of closures is 1.53, correct to two decimal places.
For the period 2000 to 2006 the mean number of closures is 5.

Suppose the Thames Barrier was closed just once per year from 2006 onwards. In which year would the mean number of closures for the period from 2000 onwards drop below 1.53?
7 (a) The diagram shows part of a ventilator cover containing identical holes. Each hole is a rectangle, 4.55 cm long and 0.95 cm wide.

Gas regulations state that the total area of the holes must be at least 100 cm².

Find the minimum number of holes needed.

(b) The diagram represents a circular seal; O is the centre of both circles. The radii of the circles are \( R \) cm and \( r \) cm. The chord PQ, of length 28 cm, touches the inner circle at T.

Find the shaded area. Give your answer in terms of \( \pi \).

(a) ________________________ [5]

(b) ________________________ cm² [5]
(c) The diagram represents a cross-section of three cylindrical ventilation ducts, each of radius 5.8 cm, tightly enclosed in a larger cylinder. A, B, C and D are the centres of the four circles.

Calculate the radius of the larger cylinder.

(c) ______________________ cm [5]
A UK airport recorded the delays to flights arriving one February. The tables summarise the data for both scheduled flights and chartered flights.

Scheduled flights

<table>
<thead>
<tr>
<th>Delay (t minutes)</th>
<th>Frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>$0 &lt; t \leq 15$</td>
<td>10706</td>
</tr>
<tr>
<td>$15 &lt; t \leq 30$</td>
<td>2322</td>
</tr>
<tr>
<td>$30 &lt; t \leq 60$</td>
<td>1380</td>
</tr>
<tr>
<td>$60 &lt; t \leq 180$</td>
<td>782</td>
</tr>
</tbody>
</table>

Number of scheduled flights = 15190
Mean delay = 19.0 minutes
Median = 10.6 minutes
Interquartile range = 14.1 minutes

Chartered flights

<table>
<thead>
<tr>
<th>Delay (t minutes)</th>
<th>Frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>$0 &lt; t \leq 15$</td>
<td>1231</td>
</tr>
<tr>
<td>$15 &lt; t \leq 30$</td>
<td>419</td>
</tr>
<tr>
<td>$30 &lt; t \leq 60$</td>
<td>329</td>
</tr>
<tr>
<td>$60 &lt; t \leq 180$</td>
<td>214</td>
</tr>
</tbody>
</table>

Number of chartered flights = 2193

(a) Using these data compare the delays experienced by scheduled flights and chartered flights, describing one similarity and one difference.

Justify your answers with relevant calculations and diagrams.
(b) The data given do not include the information that
- 165 scheduled flights were more than 180 minutes late,
- 38 chartered flights were more than 180 minutes late.

How would this extra information affect estimates of the mean and median?
Mark Schemes for the Units

June 2008
OCR (Oxford, Cambridge and RSA Examinations) is a unitary awarding body, established by the University of Cambridge Local Examinations Syndicate and the RSA Examinations Board in January 1998. OCR provides a full range of GCSE, A level, GNVQ, Key Skills and other qualifications for schools and colleges in the United Kingdom, including those previously provided by MEG and OCEAC. It is also responsible for developing new syllabuses to meet national requirements and the needs of students and teachers.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners’ meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates’ scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

(ii) 396 ft
(iii) 495 ft from 3-digit integer
(b) Identifies \( q \) as 100s or 1st digit
\( r \) as 10s or 2nd digit
\( p \) as units or 3rd or last digit
(c) Complete algebraic proof

M1: 100a + 10b + c or 100c + 10b + a
M1: 100a + 10b + c & 100c + 10b + a
M1: 100a + 10b + c – 100c – 10b – a
M1: correct subtraction, no brackets
Not 100a + 10b + c – 100c + 10b + a

\[ 100a + 10b + c \]
\[ 100c + 10b + a \]
unless simplified to correct result below.
A1: = 99a – 99c or 99(a–c)

5
(a) 1, 6, 12, 8, 0
(b)(i) 6 faces (Accept "sides" but not "cubes")
each square subtract 1 for each end
(ii) 6

- 1 for each answer Accept "naught", "none" or "zero" for 0 here and in (b)(ii).
- 3 for each point
Accept diagrammatic explanation

NB: \( n^3 – (n-2)^3 – 6(n–2)^2 – 8 \equiv 12(n–2) \)
(a) eg
1. There is more variation in later period.
2. Post 2000 there were no years with no closures.
3. Before 2000 there were no years with more than 5 closures.
4. Median before 2000 is 1; for later group median is 5.
5. Mode increases (from 0 to 2).
6. Highest no. of closures rises from 5 to 11.
7. Range doubles (or increases by 5) after 2000.
8. IQR increases (from 3 to 6).
9. The total number of closures in 2000–6 exceeds the total number of closures previously.
10. Frequencies were increasing (with time) before 2000, but decreasing from 2000 on.
11. Positive correlation changes to negative.

(b) (i) \( \frac{7}{24} \) isw Accept 0.29... or 29%

(ii) 15/136 isw Accept 0.11(029...) or 11%

(c) 2052
Candidates may form other correct equations with \( n \) standing for eg the number that must be added to 2000 to get final date.
Marks available should correspond to the example given.

Step-by-step or T&I:
M1 for each of candidate's steps/trials up to max 3. See below.

Table shows mean if there was 1 closure per year from 2006 until that date.
7 (a) 24

(b) $196\pi$ (dependent on Pythagoras seen)

(c) 12.5 www

Alt. method using sine rule
M1: isos. $\triangle$ (eg BCD) soi
M1: sine rule used
M1: $2 \times 5.8 \times \sin 30^\circ / \sin 120^\circ = 6.697\ldots$
DM1: + 5.8 = 12.497\ldots

Alt. method using supplied scale drawing
(Max 3)
M1: either fraction $\frac{5.8}{1.9}$ or $\frac{R}{4.1}$
A1: $\frac{5.8}{1.9} = \frac{R}{4.1} \quad A1: R = 12.5(\ldots)$ See below.

Allowing measuring tolerances of ±0.1 in lengths 1·9 & 4·1 leads to the following acceptable values for $R$ by this method.

<table>
<thead>
<tr>
<th>$R$</th>
<th>1.8</th>
<th>1.9</th>
<th>2.0</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>12.8</td>

</tbody>
</table>

B4: 23
M1A1: $4.55 \times 0.95 (= 4.3225)$
DM1A1: $100/4.3225 = 23.1\ldots$

M1: right angled triangle soi
M1: Pythagoras attempted
eg $R^2 \pm r^2 = x^2$
M1: $R^2 - r^2 = 14^2$
M1: $\pi R^2 - \pi r^2 = \pi \times 14^2$
SC2: $\pi R^2 - \pi r^2$ or SC1: $\pi R^2$ or $\pi r^2$

M1: right angled $\triangle$ soi
M1: correct trig ratio used
M1: $5.8/\cos 30^\circ (= 6.697\ldots)$
DM1: + 5.8 (= 12.497\ldots)

Accept correct alternative methods eg
M2: altitude of equil. $\triangle = 5.8\sqrt{3} (= 10.05)$
M1: centroid to vertex $= \frac{2}{3} \times 5.8\sqrt{3}$
### (a) Processing:

Histograms or cum fr graphs

Fds: 714, 155, 46, 6.5
  82, 28, 11, 1.8

Cum frs: 10706, 13028, 14408, 15190
  1231, 1650, 1979, 2193

For chartered flights: mean \((27.0 \pm 0.2)\)
  or median \((13.4 \pm 0.2)\) ft graph
  or iqr \((23.2 \pm 0.4)\) ft graph

### Similarity:

For most flights: delay < 15 minutes
Evidence: eg both medians are in \(0 < t \leq 15\)

OR Both data sets exhibit (rapid) decay oe
Evidence eg see diagrams

### Difference:

Mark depends on supporting calcns.

Scheduled flts are less delayed
Evidence:
  or Scheduled mean \((19) <\) Chartered mean \((27)\)
  or Sched. median \((11) <\) Charted median \((13)\)

OR Delays on charter flights are more variable
Evidence: Sch iqr \((14) <\) Chart iqr \((23)\)

### (b) Medians would be increased.

Accept: Means would be increased.
  or Medians would stay in same class.

Means cannot be estimated reliably. oe
(eg: there would be problems estimating means)

### Mark scheme

<table>
<thead>
<tr>
<th>Component</th>
<th>Mark</th>
<th>Description</th>

Candidates answer on the question paper

OCR Supplied Materials:
None

Other Materials Required:
- Electronic calculator
- Geometrical instruments
- Tracing paper (optional)

Thursday 22 January 2009
Afternoon
Duration: 2 hours

INSTRUCTIONS TO CANDIDATES
- Write your name clearly in capital letters, your Centre Number and Candidate Number in the boxes above.
- Use black ink. Pencil may be used for graphs and diagrams only.
- Read each question carefully and make sure that you know what you have to do before starting your answer.
- Show your working. Marks may be given for a correct method even if the answer is incorrect.
- Final answers should be rounded to an appropriate degree of accuracy.
- Answer all the questions.
- Do not write in the bar codes.
- Write your answer to each question in the space provided, however additional paper may be used if necessary.

INFORMATION FOR CANDIDATES
- The number of marks is given in brackets [ ] at the end of each question or part question.
- You are expected to use an electronic calculator for this paper.
- Use the π button on your calculator or take π to be 3.142 unless the question says otherwise.
- The total number of marks for this paper is 100.
- This document consists of 20 pages. Any blank pages are indicated.

FOR EXAMINER'S USE

© OCR 2009 [100/1118/3]
SP (KN) T66799/5
Area of trapezium = \( \frac{1}{2} (a + b)h \)

Volume of prism = (area of cross-section) \times \text{length}

In any triangle \( ABC \)

Sine rule \( \frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C} \)

Cosine rule \( a^2 = b^2 + c^2 - 2bc \cos A \)

Area of triangle = \( \frac{1}{2} ab \sin C \)

Volume of sphere = \( \frac{4}{3} \pi r^3 \)

Surface area of sphere = \( 4\pi r^2 \)

Volume of cone = \( \frac{1}{3} \pi r^2 h \)

Curved surface area of cone = \( \pi rl \)

The Quadratic Equation

The solutions of \( ax^2 + bx + c = 0 \), where \( a \neq 0 \), are given by

\[
x = \frac{-b \pm \sqrt{(b^2 - 4ac)}}{2a}
\]
1 (a) The diagram shows a fair blue dice. The 6 faces are marked with the numbers 1, 1, 6, 6, 8, 8. Barry throws the blue dice.

What is the probability that it lands with 8 on the top face?

(a) ________________________ [2]

(b) The diagram shows two fair dice, one red and one green. The 6 faces of the red one are marked with the numbers 3, 3, 5, 5, 7, 7. The 6 faces of the green one are marked with the numbers 2, 2, 4, 4, 9, 9. When the red dice and the green dice are thrown at the same time, the one with the higher number on the top face wins.

(i) Complete the table to show the winning dice.

<table>
<thead>
<tr>
<th>Red</th>
<th>3</th>
<th>5</th>

<tr>
<td></td>
<td>4</td>
<td>G</td>
<td></td>
</tr>
<tr>
<td></td>
<td>9</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(ii) Find the probability that the red dice wins.

(b)(ii) ________________________ [2]

(c) The blue dice from part (a) and the green dice from part (b) are thrown together, the one with the higher number on the top face wins.

Find the probability that the blue dice wins.

(c) ________________________ [3]
(a) Write down the next two numbers in this sequence.

10  20  30  40  ______  ______

(b) When you divide 72 by 10 the remainder is 2.
    When you divide 63 by 7 the remainder is 0.

(i) Find the remainder when you divide 59 by 7.

(b)(i) ____________________ [1]

(ii) Complete the list of all the possible remainders when you divide a whole number by 7.

(ii) 0, 1, 2, 3, ________________ [1]
Short bar codes are 8 digits long. They consist of a 7-digit number followed by a check digit.

This is the check digit

The check digit is found from a calculation using the first 7 digits.

The rest of this question is about such check digits.

(c) One method of forming the check digit is to use the remainder when the number formed by the first 7 digits is divided by 7.

(i) Find the check digit when this method is used with the 7-digit number 1234 567.

(ii) One bar code is 1234 3214.
Adam’s scanner misreads it as 1234 3914; Barbara’s misreads it as 1234 8214.

By calculating the check digits for 1234 3914 and 1234 8214 show that one mistake is detectable but not the other.
Another way of forming the check digit, $c$, for a 7-digit number uses a Weighted Sum of Digits, WSD.

\[
WSD = 3 \times (\text{the sum of the 1st, 3rd, 5th and 7th digits}) + (\text{the sum of the 2nd, 4th and 6th digits}) + c
\]

c is the 1-digit number that makes WSD into a multiple of 10; $c$ cannot be negative.

Here is an example.

Let the check digit for the number 9362 145 be $c$.

\[
WSD = 3 \times (9 + 6 + 1 + 5) + (3 + 2 + 4) + c
\]
\[
= 72 + c.
\]

To make WSD a multiple of 10, $c = 8$.

(i) Use the WSD method to find the check digit for the 7-digit number 1234 567.

(ii) A packet has a bar code with the check digit calculated by WSD. One scanner reads the bar code as 5382 9122, another reads it as 5832 9122.

Comment.
3 Sam is a tree surgeon.

(a) Sam estimates that a tree is 25 feet tall.

What is 25 feet in metres, to the nearest metre?

(a) ____________________ m [1]

(b) Show that a circle of diameter 50 cm has a circumference of about 157 cm. [1]

In the rest of this question assume that tree trunks have circular cross-sections.

(c) The diagram shows, full size, part of Sam's tape measure; the top edge is marked in centimetres.

![Tape Measure Diagram]

Sam measures the circumferences of tree trunks with his tape measure. He needs to record the diameters. He marks diameters on the bottom edge of the tape opposite the corresponding circumferences. He has already marked 50.

(i) Explain why 50 is opposite 157. [1]

(ii) Write 55 on the tape in the correct place to indicate a diameter of 55 cm. [3]
(d) Sam estimates the height of a tree. He stands 18 m from the tree and holds a ruler vertically 60 cm in front of him. He measures the distance between the lines from his eye to the base and the top of the tree. This distance is 68 cm, as shown in the diagram.

Use similar figures to estimate the height of the tree showing your calculations.

(d) __________________________ m [3]

(e) Sam prices one job at £500, including VAT at 17\(\frac{1}{2}\)%.

Find how much of the £500 is VAT.

(e) £ __________________________ [4]
To estimate the volume of a tree trunk, Sam thinks of the trunk as a cone.

- The height of the cone = the height of the tree.
- The diameter of the cone = the diameter of the base of the tree.

He estimates the total volume of the tree, including branches, by multiplying the volume of the trunk by 1.9; 24% of the total volume of the tree is carbon. The density of carbon is 0.96 tonnes/m³.

An oak tree is 35 m tall; its base has a diameter of 1.2 m.

Estimate the mass of the carbon in this tree.

(f) ________________________ tonnes [4]
4 (a) (i) The sum of the whole numbers from 1 to 6 inclusive is $1 + 2 + 3 + 4 + 5 + 6$.

Calculate $1 + 2 + 3 + 4 + 5 + 6$.

(a)(i) ___________________________ [1]

(ii) Work out $\frac{1}{2}n(n + 1)$ when $n = 6$.

(ii) ___________________________ [2]

(iii) What do you notice about your answers to parts (i) and (ii)?

(iii) ___________________________ [1]

In the rest of this question you should use the following.

\[
1 + 2 + 3 + \ldots + n = \frac{1}{2}n(n + 1)
\]

This means that the sum of the whole numbers from 1 to $n$ inclusive is $\frac{1}{2}n(n + 1)$.

(b) (i) Find the sum of the whole numbers from 1 to 50 inclusive.

(b)(i) ___________________________ [2]

(ii) Find the sum of the whole numbers from 1 to 100 inclusive.

(ii) ___________________________ [2]
(iii) Using your answers to (b)(i) and (ii) find the sum of the odd numbers from 1 to 99 inclusive.

(iii) ____________________________ [2]

(c) The diagram shows tablets arranged in rows in one corner of a triangular tray.

- Each row of tablets is full.
- There is one tablet in the bottom row.
- Apart from the bottom row each row contains one tablet more than the row below.

(i) How many tablets would be contained in 15 full rows?

(c)(i) ____________________________ [1]

(ii) Using an algebraic method find how many full rows are needed to hold 300 tablets.

(ii) ____________________________ [5]
5  (a) The diagram shows the square PQRS and triangles PSV and RST; RS = 7.2 cm.

(i) Measure the length ST in centimetres and the size of angle $z$ in degrees.

(a)(i) ST = ______________ cm; angle $z$ = ______________° [2]

(ii) Mark accurately the point U so that STUV is a square. [2]

(iii) Taking any extra measurements you may need, calculate the areas of triangles PSV and RST.

Triangle PSV = ______________ cm$^2$; triangle RST = ______________ cm$^2$ [4]
(b) The diagram shows triangle ABC, with sides of lengths a, b and c. Angle CAB = 40°.

Two squares, ABDE and ACFG, have been drawn on two sides of the triangle.

(i) Work out angle EAG.

(ii) Show that triangles ABC and AEG have the same area.
Work out $2a + 3a + a$ to find the total length of the three rods.

Multiply out $2(3 + 4b)$ to find the shaded area.

The first diagram shows a square of side $a$ from which a square of side $b$ has been removed. It has been cut and rearranged to form a rectangle, as shown.

Complete the dimensions on the second diagram.
The diagram illustrates the process known as "completing the square".

Express $x^2 + 6x$ in the form $(x + c)^2 - d$.

(e) A small cube is removed from one corner of a large cube. The resulting shape is then cut along the broken lines to form three cuboids, A, B and C.

Work out the volumes of the cuboids A, B and C and hence factorise $g^3 - h^3$. 

(e) ____________________________ [4]
Phil was investigating the times of sunrise and sunset. The table shows some of the data he found from the internet. All times are in Greenwich Mean Time (GMT).

<table>
<thead>
<tr>
<th>Date</th>
<th>Time of sunrise hours:minutes (GMT)</th>
<th>Time of sunset hours:minutes (GMT)</th>

<td>16:29</td>
</tr>
</tbody>
</table>

(a) (i) On which of these six dates did the sun rise earliest?

(a)(i) ____________________________ [1]

(ii) Calculate the time between sunrise and sunset on 1st January. Give your answer in hours and minutes.

(ii) __________ hours __________ minutes [2]

(iii) Calculate the time between sunrise and sunset on 1st September. Give your answer in hours correct to two decimal places.

(iii) ____________________________ h [3]
Phil calculated $t$, the time in hours between sunrise and sunset. He numbered the days from 0 on 21st June, the so-called “longest day”, 1 on 22nd June, and so on.

Diagram ① shows Phil’s sketch of $t$ against the day number ($d$).

Phil realised that diagram ① was similar to a cosine graph. He sketched the graph of $y = 4 \times \cos x^\circ + 5$ which is shown in diagram ②.

(b) In diagram ② the highest and lowest points are labelled A and B.

(i) Work out the coordinates of A.

(b) (i) (________, ________) [1]

(ii) Show that the coordinates of B are (180, 1). [1]

(c) Phil thinks that the curve in diagram ① has equation $t = a \times \cos d^\circ + c$.

Using the coordinates given in diagram ①, find approximate values for $a$ and $c$.

(c) $a =$ ______________; $c =$ ______________ [4]
The table contains data about numbers of passengers (in thousands) travelling by air or by sea. The table shows data for travel between the UK and Europe, the UK and the rest of the world, and for cruising. All the data have been rounded to the nearest thousand.

Mark Schemes for the Components

January 2009
OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of pupils of all ages and abilities. OCR qualifications include AS/A Levels, GCSEs, OCR Nationals, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new syllabuses to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners’ meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates’ scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

For staff training purposes and as part of our quality assurance programme your call may be recorded or monitored
INSTRUCTIONS TO CANDIDATES

- Write your name clearly in capital letters, your Centre Number and Candidate Number in the boxes above.
- Use black ink. Pencil may be used for graphs and diagrams only.
- Read each question carefully and make sure that you know what you have to do before starting your answer.
- Show your working. Marks may be given for a correct method even if the answer is incorrect.
- Final answers should be rounded to an appropriate degree of accuracy.
- Answer all the questions.
- Do not write in the bar codes.
- Write your answer to each question in the space provided, however additional paper may be used if necessary.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [ ] at the end of each question or part question.
- You are expected to use an electronic calculator for this paper.
- Use the π button on your calculator or take π to be 3.142 unless the question says otherwise.
- The total number of marks for this paper is 100.
- This document consists of 24 pages. Any blank pages are indicated.
2
Formulae Sheet

Area of trapezium \( = \frac{1}{2}(a + b)h \)

Volume of prism \( = \) (area of cross-section) \( \times \) length

In any triangle \( ABC \)

Sine rule \( \frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C} \)

Cosine rule \( a^2 = b^2 + c^2 - 2bc \cos A \)

Area of triangle \( = \frac{1}{2}ab \sin C \)

Volume of sphere \( = \frac{4}{3}\pi r^3 \)

Surface area of sphere \( = 4\pi r^2 \)

Volume of cone \( = \frac{1}{3}\pi r^2h \)

Curved surface area of cone \( = \pi rl \)

The Quadratic Equation
The solutions of \( ax^2 + bx + c = 0 \), where \( a \neq 0 \), are given by

\[
x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}
\]
1 (a) For the following statements write

T if you think it is true,
F if you think it is false.

(i) This diagram is a net of a cube.

(ii) This rectangle has 4 lines of symmetry.

(a)(i) ________________________ [1]

(ii) ________________________ [1]
(b) Here are pairs of statements. In each case the first statement is not always true.

Complete the second statement so that it is always true.

(i) The median of a set of 5 marks is the 3rd mark.

The median of a set of 5 marks is the 3rd mark if ________________________ [1]

(ii) When $x$ and $y$ are prime numbers, $x + y$ is even.

When $x$ and $y$ are prime numbers, $x + y$ is even unless ____________________________

________________________________________________________ [2]
(iii) When \( k \) is any number, \( k^2 \) is a positive number.

\[ k^2 \text{ is a positive number except when } \frac{k}{2} = 1 \]  

[1]

(iv) When \( k \) is any number, \( k^2 \) is greater than \( k \).

\[ k^2 \text{ is greater than } k \text{ if } k > 1 \text{ or } k < -1 \]  

[2]
2 The set of numbers 1, 1, 2, 3, 5, … is known as the **Fibonacci sequence**.

<table>
<thead>
<tr>
<th>1st term</th>
<th>2nd term</th>
<th>3rd term</th>
<th>4th term</th>
<th>5th term</th>

</tbody>
</table>

The first two terms are both 1; after this each term is the sum of the two previous terms.

For example: the 3rd term = the sum of the 1st and 2nd terms = 1 + 1 = 2,
the 4th term = the sum of the 2nd and 3rd terms = 1 + 2 = 3,
the 5th term = the sum of the 3rd and 4th terms = 2 + 3 = 5.

(a) Find the sum of 3 and 5 and write your answer as the 6th term in the table. [1]

(b) Write the 10th and 11th terms in the table. [2]

(c) The pattern

odd, odd, even, odd, odd, even, …

continues throughout the Fibonacci sequence.

Explain why this happens. [3]
(d) Here is part of a spreadsheet.

<table>
<thead>
<tr>

Sam plans to enter a formula in cell C2 and then drag it to the right to generate further terms of the Fibonacci sequence.

What formula should Sam enter into cell C2?

(d) ___________________________ [2]

(e) The letters $v$, $w$, $x$, $y$, $z$ represent, in ascending order, five consecutive terms of the Fibonacci sequence.

(i) Express $x$, $y$ and $z$ in terms of $v$ and $w$, simplifying your answers.

(e)(i) $x =$ ________________, $y =$ ________________, $z =$ ________________ [6]

(ii) Hence prove that if $v$ is a multiple of 3 then $z$ is also a multiple of 3. [2]
The table shows data about Internet access for the households in Great Britain during the years 2002 to 2007.

<table>
<thead>

Source: www.statistics.gov.uk/pdfdir/inta0807.pdf

(a) (i) In which year did the number of households with Internet access first exceed 12 million?

(a)(i) ______________________ [1]

(ii) Calculate the mean of the number of households with Internet access during these 6 years.

(ii) ______________________ million [3]

(iii) Write down a full calculation which would show that the growth in Internet access from 2005 to 2006 was 5%.

(iii) ______________________ [3]
(b) Jeni wants to estimate when all the households in Great Britain will have Internet access. She prepared this scatter graph.

She then drew the line of best fit shown; this passes through three of her plotted points.

(i) Show that the gradient of Jeni's line of best fit is 3. [1]

(ii) By finding the equation of Jeni's line of best fit, find the value of $x$ when $y = 100$.

Equation: ____________________________ ; $x = _______________ $ when $y = 100$. [4]

(iii) Give two reasons why a line of best fit is not appropriate for Jeni's estimation task.

1. ____________________________________________________________________
   ____________________________________________________________________

2. ____________________________________________________________________
   ____________________________________________________________________ [2]
4 (a) The diagram shows a regular octagon, ABCDEFGH, with centre O.

(i) What kind of triangle is triangle AOB?

(a)(i) ___________________________ [1]

(ii) On the diagram, using 3 of the 9 labelled points, draw and shade a triangle that is congruent to triangle AOB. [1]

(iii) Explain why angle AOB = 45°. [1]

(iv) N is the midpoint of AB; ON = 14 m.

By calculation show that AB is just under 11.6 m. [3]

(v) Calculate the area of triangle AOB.

(v) ___________________________ m² [2]
(b) The diagram shows the floor plan of an octagonal school building.

The floor plan is a regular octagon, ABCDEFGH, with centre O.

N is the midpoint of AB; ON = 14 m.

The inner octagon shown is the floor plan of an assembly hall; its vertices are at the midpoints of the lines that join the vertices of the outer octagon to O.

The assembly hall is surrounded by 8 identical spaces: 7 classrooms, numbered 1 to 7, and an entrance lobby, shown shaded.

(i) Explain in detail why the floor area of the assembly hall is 25% of the total floor area of the building.

(ii) Regulations require schools to allow classroom space of at least 1.8 m\(^2\) per pupil.

Using your answer to part (a)(v), or otherwise, calculate the maximum number of pupils allowed in one of the classrooms.
5 (a) Each letter of the phrase ‘A RANDOM DRAW’ is written on separate, identical cards.

\[ \text{A R A N D O M D R A W} \]

The 11 cards are shuffled and one card is chosen at random.

(i) Write a probability word that describes the following event.

\[ \text{The card chosen has the letter Q written on it.} \]

\[ \text{(a)(i) } \text{_____________________________ [1]} \]

(ii) Which letter is most likely to be on the card chosen?

\[ \text{(ii) } \text{_____________________________ [1]} \]

(iii) Which letters in ‘A RANDOM DRAW’ are least likely to be on the card chosen?

\[ \text{(iii) } \text{___________, __________, __________, __________ [3]} \]
(b) Each of the 9 letters of the phrase 'LUCKY DRAW' is written on separate, identical cards.

\[ \text{L U C K Y D R A W} \]

These 9 cards are put with a 10th identical, blank card.

The 10 cards are shuffled and cards are drawn one at a time, at random. **Once a card is drawn it is NOT replaced.**

(i) Write down the probability that the first card drawn has a letter on it.

\[ \text{(b)(i)} \] \[ \text{____________________________} \] \[ \text{[2]} \]

(ii) Explain why the probability that the first two cards drawn both have letters on them is \( \frac{4}{5} \).

\[ \text{(ii)} \] \[ \text{Explain why the probability that the first two cards drawn both have letters on them is} \] \[ \text{\( \frac{4}{5} \).} \] \[ \text{[3]} \]

(iii) Calculate the probability that all 9 letter cards are drawn before the blank card.

\[ \text{(iii)} \] \[ \text{____________________________} \] \[ \text{[4]} \]
A year has 365 days unless it is a leap year when it has 366 days.
The year 2008 was a leap year.
Every 4th year is a leap year, so the years 2012, 2016, and so on will be leap years.

(a) 1st January 2008 was a Tuesday.

(i) Find the remainder when you divide 366 by 7.

(a)(i) ___________________________ [2]

(ii) Using your answer to part (i) explain why 1st January 2009 was a Thursday. [1]

(iii) Which day of the week will 1st January 2010 be?

(iii) ___________________________ [1]

(b) 1st January 2008 was a Tuesday.

Explain why 1st January 2012 will be a Sunday, a change of 5 days. [1]
(c) In a leap year the ‘extra’ day is at the end of February.
Tony and Val were married on a Saturday in January.

Which day of the week will their wedding anniversary be on 50 years later?

Your answer should take account of whether they were married
• in a leap year,
• one year after a leap year,
• two years after a leap year,
• or three years after a leap year.

(c) If they were married in a leap year: ________________________________

If they were married one year after a leap year: ________________________________

If they were married two years after a leap year: ________________________________

If they were married three years after a leap year: ____________________________ [5]
7 (a) (i) Write down the coordinates of the point labelled P on the grid below.

(a)(i) (__________, ______________) [1]

(ii) Complete the table of values for \( y = 1 + 3x - 0.2x^2 \).

<table>
<thead>
<tr>
<th>( x )</th>
<th>0</th>
<th>3</th>
<th>6</th>
<th>9</th>
<th>12</th>
<th>15</th>
</tr>
</thead>
<tbody>
<tr>
<td>( y )</td>
<td>1</td>
<td>8.2</td>
<td>11.8</td>
<td>1</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

[2]

(iii) On the grid draw the graph of \( y = 1 + 3x - 0.2x^2 \). [2]
(b) Robin has just hit a tennis ball.

Using the point where Robin's foot was touching the ground as the origin, O, the ball is at the point \((x, y)\) where

\[ y = 1 + 3x - 0.2x^2 \]

and \(x\) and \(y\) are measured in metres.

The ground is horizontal.

(i) Use the graph you drew in part (a)(iii) to estimate how far the ball has travelled horizontally when it is 10 m above the ground.

(b)(i) \_____________ m and \_____________ m [2]

(ii) Estimate the angle to the horizontal at which the ball leaves the racquet.

(ii) \_____________ ° [1]

(iii) The ball hits the ground at Q. Robin wants to calculate OQ.

Explain why Robin needs to solve the equation \(1 + 3x - 0.2x^2 = 0\). [1]
(iv) Using the formula for solving quadratic equations, calculate OQ.

(iv) ___________________________ m [3]

(v) Showing your method, calculate the maximum height of the ball above the ground.

(v) ___________________________ m [2]
8 \( \text{a) } \) HEXAGN is a regular hexagon. Its centre is at O.

(i) State the order of rotational symmetry of a regular hexagon.

(a)(i) ______________________ [1]

(ii) Find the size of angle HOE.

(ii) ______________________ ° [2]

(b) The diagram shows two points, Q and Q', and a point P on a line.

Q' is the reflection of Q in the line.
PQ makes an angle of 21° with the line.

Explain why angle QPQ' = 42°.

Angle QPQ' = 42° because ________________________________________________________ [1]
Diagram 1 shows an open-ended spanner being used to turn a nut. The nut is a regular hexagon. The handle of the spanner makes an angle of \( t^\circ \) with the line of symmetry drawn.

The spanner can be turned over to fit the nut as shown in Diagram 2.

The angle between the two possible positions of the handle is \( u^\circ \).

(i) Express \( u \) in terms of \( t \), explaining your reasoning.

\[ u = \ldots \text{ because } \ldots \]

[2]
The instructions below show how you can use the spanner to turn a nut in an obstructed position.

1. Fit the spanner on the nut.
2. Rotate the spanner and nut clockwise as far as possible, as shown dotted.

3. Turn the spanner over and fit it on the nut.
4. Rotate the spanner and nut clockwise as far as possible.

Turn the spanner over again and fit it on the nut, as in 1. Repeat this sequence of moves.

In this way the nut can be turned through any number of degrees.

(ii) Using your answer to part (a)(ii), calculate the best value for $t$. Explain your reasoning.

$$t = \text{___________} \text{ because } \text{______________________________}$$

_________  

[3]
Mark Schemes for the Units

June 2009
OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of pupils of all ages and abilities. OCR qualifications include AS/A Levels, GCSEs, OCR Nationals, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new syllabuses to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support which keep pace with the changing needs of today’s society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners’ meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates’ scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

## J915/01 Paper 1

### 1 (a)

(i) T  
Accept "sequential".

(ii) F

### (b)

(i) they are ordered oe  
Accept "sequential".

(ii) \( x \) or \( y = 2 \) but not both oe  
Accept "\( x \) or \( y \) is even but not both" oe  
eg just one of \( x \) or \( y \) is odd.

(iii) \( k = 0 \) oe

(iv) \( k > 1 \) \( k < 0 \)  
Accept: either part

### 2 (a)

8

### (b)

55, 89  
Accept: each part.

### (c)

odd + odd = even  
odd + even = odd  
even + odd = odd  
3

Accept: O+O = E  
B1: O+E (either order) = O  
B1: a 3rd useful and valid statement  
eg "and so on" or "It starts with 2 odds"

### (d)

\( =A2+B2 \)  
OR \( =A2+B2+A2+B2 \)  
OR \( =SUM(A2:B2) \)  
Accept: =SUM(A2+B2)

### (e)

(i) \( v + w, v + 2w, 2v + 3w \)  
6

B1: \( x = v + w \)  
M1: \( y = w + x \) OR \( w + v + w \)  
A1: \( = v + 2w \)  
M1: \( z = x + y \)  
+ M1: \( = v + w + v + 2w \) with or without ()  
A1: \( = 2v + 3w \) ft from linear \( x \) & \( y \).

(ii) if \( v \) is a multiple of 3 then so is \( 2v \).  
The sum of multiples of 3 is a multiple of 3.

### 3 (a)

(i) 12.86 or 12.87 or 12.865  
Accept: 12.9 www (Not 13)

(ii) \( 13 \times 93 - 13 \times 26 \times 100 \) oe  
Accept: \( 13 \times 93 \times 13 \times 26 - 1 = 0.05... \)

(iii) \( \frac{13 \times 93 - 13 \times 26}{13 \times 26} \) \( \times 100 \) oe  
eg \( 13.93/13.26 - 1 = 0.05... \)

### (b)

(i) \( (55–46)/3 \) OR \( (61–46)/5 \)  
OR \( (61–55)/2 \)  
1  
Accept: 9/3, 15/5, 6/2

(ii) \( y = 3x - 5960 \)  
\( x = 2020 \)  
4

B2: correct equation  
B2: 2020  
or B1: \( y = 3x + k \)  
or M1: \( 100 = 3x - 5960 \) soi (ft from equation)

(iii) Linear relation implies that percentage exceeds 100% in due course. oe  
Jeni cannot foretell future pattern.

### 2 B1:

One reason should be about why linear model is not appropriate as percentage nears 100.  
The other reason should criticise extrapolation.
### Question 4

<table>
<thead>
<tr>
<th>(a)</th>
<th>(i) Isosceles</th>
<th>1</th>
<th>Accept: Acute (angled)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(ii) Correct Δ drawn &amp; shaded</td>
<td>1</td>
<td>Accept $8 \times 45 = 360$</td>
</tr>
<tr>
<td></td>
<td>(iii) $360/8$ oe</td>
<td>1</td>
<td>$14 \tan 22.5^\circ \times 2 = 11.59\ldots$ or 11.58</td>
</tr>
<tr>
<td></td>
<td>(iv) $(AB =) 14 \tan 22.5^\circ \times 2$</td>
<td>3</td>
<td>M1: Attempt to use $22.5^\circ$ or $67.5^\circ$</td>
</tr>
<tr>
<td></td>
<td>Must be slightly less than 11.6.</td>
<td></td>
<td>DM1: $14 \times \tan 22.5^\circ$ oe</td>
</tr>
<tr>
<td></td>
<td>(v) Accept 81.2 or 81.1…</td>
<td>2</td>
<td>M1: $14 \times 11.6$ (or better) $\div 2$ No ft</td>
</tr>
</tbody>
</table>

**(b)**

(i) The octagons are **similar**

(length) sc. factor = 0.5 (or 2)

area sc. factor = 0.5$^2$ (or 2$^2$)

(ii) 33

### Question 5

<table>
<thead>
<tr>
<th>(a)</th>
<th>(i) Impossible oe</th>
<th>1</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(ii) A</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>(iii) M, N, O, W</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**(b)**

(i) $\frac{9}{10}$ oe

(ii) $\frac{9}{10} \times \frac{4}{9} = \frac{4}{9}$

(iii) $\frac{1}{10}$ (or 0.1) www

### Question 6

<table>
<thead>
<tr>
<th>(a)</th>
<th>(i) 2</th>
<th>2</th>
<th>M1: $366 \div 7 (= 52.28\ldots)$</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(ii) … date falls 2 days (later)</td>
<td>1</td>
<td>Must refer to 2</td>
</tr>
<tr>
<td></td>
<td>(iii) Friday</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td></td>
<td>(b) 2+1+1+1 (=5) or 1+1+1+2 (=5) seen</td>
<td>1</td>
<td>Accept list of year date and start day.</td>
</tr>
<tr>
<td></td>
<td>Saturday Friday Friday Saturday</td>
<td>5</td>
<td>Accept: Friday + 2 days = Sunday</td>
</tr>
</tbody>
</table>

**Saturday**

- B1: 50 yrs $\equiv$ 63 days
- B1: $\equiv$ 0 (or 7) days (fwd) or Saturday
- B1: 50 yrs $\equiv$ 62 days
- B1: $\equiv$ 6 days (fwd) or 1 day back

**OR:**

- B1: 48 yrs $\equiv$ 60 days (fwd)
- B1: $\equiv$ 4 days (fwd) or Wednesday

**OR:**

- M1: sequence such as …MoTuWeTh SaSuMoTu Th…
- or …ThFrSaSu TuWeThFr Su…
### 7 (a)  
(i) (15, 1)  
(ii) 11.8, 8.2  
(iii) Correct plots & curve  

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>1</td>
</tr>
<tr>
<td></td>
<td></td>
<td>B1 each</td>
</tr>
</tbody>
</table>

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>2</td>
</tr>
</tbody>
</table>

- **P1:** 5 plots ft table, tol: 1 mm  
- **C1:** curve (not ruled) passing within 1 mm of 5 plots and rising above \( y = \) their plotted 11.8.  

(b)  
(i) 4.1, 10.9  
(ii) 70° (±5°)  
(iii) (Hits ground when) \( y = 0 \)  
(iv) 15.3 www and not by completing the square. Accept 15.33 or 15.32  
(v) 12.25  

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>2</td>
</tr>
</tbody>
</table>

- **B1 each Answers must fit from graph ±0.1.**  
- **Accept:** Height or ground level = 0  
- **M1:** \[ -3 \pm \sqrt{3^2 - 4(-0.2)(1)} \] or better  
- **A1:** 15.33(6…) (or –0.326)  
- **SC1:** \( t = 30 \) on answer line or \( u = 30 \) seen.  

### 8 (a)  
(i) 6  
(ii) 60  

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>2</td>
</tr>
</tbody>
</table>

- **M1:** 360 ÷ 6 \ oe  
- **OE:** eg: PQ’ & PQ form equal angles with line  
- **B1:** 2t or \( t + t \)  
- **B1:** the reason  

(b) Reflections preserve angles \ oe  

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>1</td>
</tr>
</tbody>
</table>

- **OE:** eg: PQ’ & PQ form equal angles with line  
- **B1:** 2t or \( t + t \)  
- **B1:** the reason  
- **SC1:** \( t = 30 \) on answer line or \( u = 30 \) seen.  

(c) (i) \( 2t \)  
(ii) 15  

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>3</td>
</tr>
</tbody>
</table>

- **B1:** 15  
- **B1:** Reason. Depends on B2 for 15.  
- **SC1:** \( t = 30 \) on answer line or \( u = 30 \) seen.
