The diagram shows a triangle with one of its sides extended.

Complete these statements to show that \( y = a + b \).

\[
a + b + c = \underline{\phantom{180}} \quad \text{because} \quad \underline{\phantom{\text{triangle angle sum}}}
\]

Therefore \( a + b = 180 - c \).

Also \( y = 180 - c \) \quad \text{because} \quad \underline{\phantom{\text{triangle angle sum}}}

Therefore \( y = a + b \).

This proves that the exterior angle of a triangle is equal to the sum of the two \underline{\phantom{90}} \quad \text{opposite angles.} \]
