

Biology A

General Certificate of Secondary Education

Unit **A161/01**: Modules B1, B2, B3 (Foundation Tier)

Mark Scheme for June 2013

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

© OCR 2013

Annotations

Used in the detailed Mark Scheme:

Annotation	Meaning
/	alternative and acceptable answers for the same marking point
(1)	separates marking points
not/reject	answers which are not worthy of credit
ignore	statements which are irrelevant - applies to neutral answers
allow/accept	answers that can be accepted
(words)	words which are not essential to gain credit
<u>words</u>	underlined words must be present in answer to score a mark
ecf	error carried forward
AW/owtte	credit alternative wording / or words to that effect
ORA	or reverse argument

Available in scoris to annotate scripts:

	indicate uncertainty or ambiguity
	benefit of doubt
	contradiction
	incorrect response
	error carried forward
	draw attention to particular part of candidate's response
	no benefit of doubt
	reject
	correct response
	indicate level awarded for a question marked by level of response
	information omitted

ADDITIONAL OBJECTS: You **must** assess and annotate the additional objects for each script you mark. Where credit is awarded, appropriate annotation must be used. If no credit is to be awarded for the additional object, please use annotation as agreed at the SSU.

1. Subject-specific Marking Instructions

- a. Accept any clear, unambiguous response (including mis-spellings of scientific terms if they are *phonetically* correct, but always check the guidance column for exclusions).
- b. If a candidate alters his/her response, examiners should accept the alteration.
- c. Crossed out answers should be considered only if no other response has been made. When marking crossed out responses, accept correct answers which are clear and unambiguous.

eg for a one-mark question where ticks in the third and fourth boxes are required for the mark:

✗
✗

*This would be worth
1 mark.*

✓
✗

*This would be worth
0 marks.*

✗
✗
✓
✓

*This would be worth
1 mark.*

d. Marking method for tick-box questions:

If there is a set of boxes, some of which should be ticked and others left empty, then judge the entire set of boxes. If there is at least one tick, ignore crosses and other markings. If there are no ticks, accept clear, unambiguous indications, eg shading or crosses. Credit should be given according to the instructions given in the guidance column for the question. If more boxes are ticked than there are correct answers, then deduct one mark for each additional tick. Candidates cannot score less than zero marks.

eg if a question requires candidates to identify cities in England:

Edinburgh	<input type="checkbox"/>
Manchester	<input type="checkbox"/>
Paris	<input type="checkbox"/>
Southampton	<input type="checkbox"/>

the second and fourth boxes should have ticks (or other clear indication of choice) and the first and third should be blank (or have indication of choice crossed out).

Edinburgh			✓			✓	✓	✓	✓	
Manchester	✓	x	✓	✓	✓				✓	
Paris				✓	✓		✓	✓	✓	
Southampton	✓	x		✓		✓	✓		✓	
Score:	2	2	1	1	1	1	0	0	0	NR

Question		Answer	Marks	Guidance						
1	(a)	<table border="1"> <tr> <td>dimples</td> <td>scars</td> <td>weight</td> </tr> <tr> <td>eye colour</td> <td></td> <td></td> </tr> </table>	dimples	scars	weight	eye colour			2	<p>4 correct = 2 marks 3 correct = 1 mark</p> <p>if a feature is placed in more than one column, does not score</p>
dimples	scars	weight								
eye colour										
	(b)	<p>any 3 from: conclusion 1: 50:50 or 50% chance or probability; idea that it could be slightly more or less/will not be exactly 50/50; conclusion 2: is wrong; (having 2 girls) does not change probability/likelihood/ still 50% (chance)</p>	3	<p>could state that conclusion 1 is correct or incorrect answer which states that 50 will be male does not score this mark could cover both conclusions together without specifically relating to 1 or 2 by stating that both are wrong.</p>						
Total			5							

Question	Answer	Marks	Guidance
<p>2 (a)</p>		<p>3</p>	<p>4 lines correct = 3 marks 2 or 3 lines correct = 2 marks 1 line correct = 1 mark</p> <p>2 lines from one box negates that mark</p>
<p>(b)</p>	<p>idea that genetic disease/Steve & Val is much more serious/dangerous than polydactyly/Mel & Jo (1)</p> <p>(Steve & Val) May be more likely to have termination (1)</p>	<p>2</p>	<p>accept more life-threatening</p> <p>O.R.A.</p>

Question		Answer	Marks	Guidance
	(c) (i)		1	gene in identical position to original give mark as long as there is a 50% overlap
	(ii)	2	1	accept any indication of correct response – eg underlining etc.
Total			7	

Question		Answer	Marks	Guidance
3	(a)	<p>Level 3 (5–6 marks) Good explanation of both Huntington’s and cystic fibrosis using dominant and recessive with genotypes and correct and relevant diagrams used in explanation. Plus additional information such as explanation of carriers and chances of inheritance.</p> <p>Quality of written communication does not impede communication of the science at this level.</p> <p>Level 2 (3–4 marks) Correct explanation of Huntington’s or cystic fibrosis using dominant and recessive. Quality of written communication partially impedes communication of the science at this level.</p> <p>Level 1 (1–2 marks) Makes a simple statement that Huntington’s is dominant or cystic fibrosis is recessive.</p> <p>Quality of written communication impedes communication of the science at this level.</p> <p>Level 0 (0 marks) Insufficient or irrelevant science. Answer not worthy of credit.</p>	6	<p>This question is targeted at grades up to C</p> <p>Indicative scientific points at Level 3 may include</p> <ul style="list-style-type: none"> • correct diagram used to assist explanation • both cystic fibrosis and Huntington’s correctly explained <p>Indicative scientific points at Level 2 may include</p> <ul style="list-style-type: none"> • cystic fibrosis – correct idea that can be carrier • both recessive alleles must be present to be a sufferer • Huntington’s – only 1 allele means sufferer • diagram may be missing or incorrect <p>Indicative scientific points at Level 1 may include</p> <ul style="list-style-type: none"> • Cystic fibrosis is recessive • Huntington’s is dominant • some linking of cystic fibrosis/carrier <p>Use the L1, L2, L3 annotations in Scoris; do not use ticks.</p>

Question	Answer	Marks	Guidance
6	<p>[Level 3] Explanation of resistance and how it can be avoided OR full description using general points. Quality of written communication does not impede communication of the science at this level. (5–6 marks)</p> <p>[Level 2] Use of idea of resistance and how it can be avoided, from general points. Quality of written communication partially impedes communication of the science at this level. (3–4 marks)</p> <p>[Level 1] makes basic points about antibiotics</p> <p>Quality of written communication impedes communication of the science at this level. (1–2 marks)</p> <p>Level 0 (0 marks) Insufficient or irrelevant science. Answer not worthy of credit.</p>	6	<p>This question is targeted at grades up to E</p> <p>Indicative scientific points explaining resistance:</p> <ul style="list-style-type: none"> • some bacteria will be more resistant to the antibiotic than other bacteria due to mutation or variation • these will survive and breed. • non-resistant ones will die out. • because of rapid reproduction bacteria will soon be all resistant. • should make sure all bacteria killed (by finishing course or use new antibiotic) <p>Indicative general points:</p> <ul style="list-style-type: none"> • idea that bacteria can become resistant to antibiotics • antibiotics do not work on viruses • only work against bacteria & fungi • only when necessary • complete course of treatment. • new antibiotics are required to replace the ones that bacteria are now resistant to. • bacteria mutate <p>Indicative basic points:</p> <ul style="list-style-type: none"> • bacteria can change/evolve • (new antibiotics) to avoid side effects eg allergy • work against/kill bacteria/fungi • different antibiotics needed for different diseases. • antibiotic stops being effective/stops working

Question			Answer	Marks	Guidance
					beware answers where people become resistant accept microbes or pathogens but ignore reference to viruses ignore immune Use the L1, L2, L3 annotations in Scoris; do not use ticks.
			Total	6	

Question	Answer	Marks	Guidance	Question	Answer
7	(a)	(i)	0.1%	1	accept 0.09%
		(ii)	100%	1	
		(iii)	he needs to change to a new/different pesticide; that the pests are not resistant to OR because pest are now resistant to the old pesticide	2	accept insecticide or chemicals accept use a stronger pesticide ignore become immune accept alternative words for pest such as insect
		(iv)	any 2 from small area; small sample; pests may travel in and out of sample area; only did the test once/should repeat it	2	ignore same area accept only 1 farmer/farm
	(b)		any three from predator kills other species/other insects; predator becomes new food source; pest is no longer available as a food source; competition between new predator & existing predators; existing predators will eat other animals; usual predators of pest not available as a food source (for tertiary consumers);	3	ignore extinctions ignore reference to pest eating other animals/insects accept idea of interfering with existing predators or example, eg birds which eat insects would leave ignore predator may eat crops
			Total	9	

Question		Answer	Marks	Guidance
8	(a)	<p>Level 3 (5–6 marks) Gives a description of evolution AND speciation using key terms.</p> <p>Quality of written communication does not impede communication of the science at this level.</p> <p>Level 2 (3–4 marks) Gives a description of evolution OR speciation using key terms.</p> <p>Quality of written communication partially impedes communication of the science at this level.</p> <p>Level 1 (1–2 marks) Makes a simple statement about evolution OR speciation</p> <p>Quality of written communication impedes communication of the science at this level.</p> <p>Level 0 (0 marks) Insufficient or irrelevant science. Answer not worthy of credit.</p>	6	<p>This question is targeted at grades up to C</p> <p>Indicative scientific points on Evolution may include</p> <ul style="list-style-type: none"> • Natural selection • variation • mutation • competition • selective survival/survival of best adapted/survival of fittest • reproduction • pass on characteristic/genes <p>Indicative scientific points on Speciation may include</p> <ul style="list-style-type: none"> • population gets split into two groups (eg new mountain range or new river etc) • reproductive isolation • different/changed environments • split populations become different • different species can not interbreed (eg due to mating seasons/courtship/genetic incompatibility) <p>Use the L1, L2, L3 annotations in Scoris; do not use ticks.</p>

Question		Answer	Marks	Guidance																		
	(b)	not breed with other beetles; to produce fertile offspring; check DNA; look for similarities/compare with others (in DNA)	2	ignore reference to comparing characteristics NB DNA is unknown = 2 marks																		
	(c) (i)	4	1	more than 1 number given = 0 accept any unambiguous indications using lines from statements																		
	(ii)	5	1	more than 1 number given = 0 accept any unambiguous indications using lines from statements																		
	(d)	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 2px;">make sense of the enormous diversity of organisms on Earth.</td> <td style="text-align: center; width: 30px;">✓</td> </tr> <tr> <td style="padding: 2px;"> </td> <td> </td> </tr> <tr> <td style="padding: 2px;">increase biodiversity.</td> <td> </td> </tr> <tr> <td style="padding: 2px;"> </td> <td> </td> </tr> <tr> <td style="padding: 2px;">improve sustainability.</td> <td> </td> </tr> <tr> <td style="padding: 2px;"> </td> <td> </td> </tr> <tr> <td style="padding: 2px;">reduce the number of disease causing predators.</td> <td> </td> </tr> <tr> <td style="padding: 2px;"> </td> <td> </td> </tr> <tr> <td style="padding: 2px;">show the evolutionary relationships between organisms.</td> <td style="text-align: center;">✓</td> </tr> </table>	make sense of the enormous diversity of organisms on Earth.	✓			increase biodiversity.				improve sustainability.				reduce the number of disease causing predators.				show the evolutionary relationships between organisms.	✓	2	if more than two boxes are ticked, deduct one mark for each additional tick
make sense of the enormous diversity of organisms on Earth.	✓																					
increase biodiversity.																						
improve sustainability.																						
reduce the number of disease causing predators.																						
show the evolutionary relationships between organisms.	✓
