INSTRUCTIONS TO CANDIDATES

- Write your name, centre number and candidate number in the boxes above. Please write clearly and in capital letters.
- Use black ink. HB pencil may be used for graphs and diagrams only.
- Answer all the questions.
- Read each question carefully. Make sure you know what you have to do before starting your answer.
- Write your answer to each question in the space provided. Additional paper may be used if necessary but you must clearly show your candidate number, centre number and question number(s).
- Do not write in the bar codes.

INFORMATION FOR CANDIDATES

- Your quality of written communication is assessed in questions marked with a pencil (✍).
- The number of marks is given in brackets [ ] at the end of each question or part question.
- The total number of marks for this paper is 50.
- This document consists of 16 pages. Any blank pages are indicated.
1 Respiration is important to all living things.

(a) Draw one straight line from where respiration takes place to what is used. Then draw only one more straight line from what is used to what may be produced.

where | what is used | what may be produced
--- | --- | ---
cells | carbon dioxide and lactic acid | carbon dioxide and lactic acid
 | glucose and lactic acid | glucose and lactic acid
 | oxygen and carbon dioxide | oxygen and carbon dioxide
 | glucose and oxygen | glucose and oxygen

[b] All living things produce waste.

Which of these organs removes waste produced by respiration?

Put a tick (✓) in the box next to the correct answer.

- lungs
- heart
- brain
- muscles

[1]
(c) Another organ that removes waste is the kidney.

Which of the following are removed by the kidney?

Put ticks (✓) in the boxes next to the two correct answers.

<table>
<thead>
<tr>
<th>carbon dioxide</th>
<th>✓</th>
</tr>
</thead>
<tbody>
<tr>
<td>urea</td>
<td></td>
</tr>
<tr>
<td>lactic acid</td>
<td></td>
</tr>
<tr>
<td>water</td>
<td></td>
</tr>
<tr>
<td>faeces</td>
<td></td>
</tr>
</tbody>
</table>

Reliable scientific evidence must be carefully collected, stored and prepared.

Using an example, describe and explain how a scientist would do this.

The quality of written communication will be assessed in your answer.

Three patients arrive at an Accident and Emergency department of a hospital at the same time.

**Patient A** is unconscious and has been injured in a high speed car crash.

**Patient B** has hit his thumb with a hammer while hammering a nail into a block of wood.

**Patient C** felt a pain in her back when lifting a heavy box.

(a) A triage nurse assesses the three new patients.

Explain using the three examples how she would do this.

...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
................................................................................................................................................... [3]

(b) A doctor examines patient A.

(i) Suggest two types of information the doctor should have before treating the patient. Explain why it will be difficult to get this information.

...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
................................................................................................................................................... [3]

(ii) The doctor needs to perform surgery on patient A.

Other than collecting information, suggest reasons why the doctor will want to talk to one of the patient's relatives before performing surgery.

Rashid wants to lose weight. He goes on a diet for six weeks.

(a) He weighs himself on some bathroom scales once a week to show his weight loss.

Rashid is concerned that his measurements may not give him the true value of his weight.

Suggest **three** things that Rashid could do to make sure his weekly measurements are close to the true value of his weight.

...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
................................................................................................................................................... [3]

(b) The table shows the readings on Rashid's scales before he started his diet and for the next four weeks.

<table>
<thead>
<tr>
<th>scale reading in kg</th>
<th>before start of diet</th>
<th>end of week 1</th>
<th>end of week 2</th>
<th>end of week 3</th>
<th>end of week 4</th>
</tr>
</thead>
<tbody>
<tr>
<td>before start of diet</td>
<td>120</td>
<td>118</td>
<td>117</td>
<td>116</td>
<td>115</td>
</tr>
</tbody>
</table>

(i) Calculate Rashid's percentage weight loss over the four weeks, correct to **two significant figures**.

Show your working.

percentage weight loss = ...................................................... % [3]
(ii) Use data in the table to estimate the reading on Rashid's scales at the end of week 5. Explain your answer by describing the trend in the data.

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................

(ii) [2]

(iii) Rashid has lost weight by dieting.

Suggest one other way he could lose weight.

...........................................................................................................................................

(iii) [1]
Jason has his blood pressure measured each year by his doctor. His doctor tells him that his latest blood pressure reading is 128/87.

(a) Jason uses this chart to find the state of his blood pressure.

Write down the state of Jason’s blood pressure.

..........................................................................................................

[1]
(b) The bar chart shows Jason’s blood pressure readings for the last four years. Complete the chart by drawing the bars for Jason’s latest reading of 128/87.

(c) The doctor explains that Jason should be concerned about his blood pressure readings. Use data from the charts in parts (a) and (b) to suggest why Jason should be concerned.

..............................................................................................................................

[Total: 5]
Pippa has a skiing accident. She breaks a bone in her ankle. The doctors repair the broken bone with a metal plate. Pippa then has treatment from a physiotherapist.

Describe how the physiotherapist assesses the injury and helps the patient recover. Give examples of good practice in your answer.

The quality of written communication will be assessed in your answer.
A blood sample is collected from a crime scene.
A forensic scientist analyses the DNA in the blood sample.

(a) Which of these processes would he use to analyse the DNA?
Put a tick (✓) in the box next to the best process.

<table>
<thead>
<tr>
<th>Process</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>chromatography</td>
<td></td>
</tr>
<tr>
<td>filtration</td>
<td></td>
</tr>
<tr>
<td>electrophoresis</td>
<td></td>
</tr>
<tr>
<td>checking blood group</td>
<td></td>
</tr>
</tbody>
</table>

(b) He obtains the following result and compares the result with the DNA of four suspects, A, B, C and D.

<table>
<thead>
<tr>
<th>sample from crime scene</th>
<th>A</th>
<th>B</th>
<th>C</th>
<th>D</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

After a quick look at the results, the scientist concluded that the sample was from suspect A.
Evaluate the scientist's conclusion.
Explain your answer.

Collecting and storing DNA evidence involves different ethical issues.

Which of the following are ethical issues if DNA evidence is stored? Put ticks (✓) in the boxes next to the three correct answers.

<table>
<thead>
<tr>
<th>Individuals have a right to privacy.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Different kinds of data may be collected.</td>
</tr>
<tr>
<td>The data may be used by other organisations.</td>
</tr>
<tr>
<td>Only scientists are used to collect the data.</td>
</tr>
<tr>
<td>A person may be unaware that data is held.</td>
</tr>
<tr>
<td>The Government passes laws to regulate data collection.</td>
</tr>
<tr>
<td>Computers are used to store the information.</td>
</tr>
</tbody>
</table>
