## Mark Scheme for June 2015

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

Annotations available in Scoris

| Annotation | Meaning |
| :---: | :---: |
| [10] | Benefit of doubt given |
| 5 | Contradiction |
| X | Incorrect response |
| [-4] | Error carried forward |
| 민 | Follow through |
| [50] | Not answered question |
| E00 | Benefit of doubt not given |
| [POT] | Power of 10 error |
| $\square$ | Omission mark |
| $\square 10$ | Rounding error |
| 8 | Error in number of significant figures |
| $\checkmark$ | Correct response |
| +1-4 | Arithmetic error |
| ? | Wrong physics or equation |

Abbreviations, annotations and conventions used in the detailed Mark Scheme (to include abbreviations and subject-specific conventions).

| Annotation | Meaning |
| :---: | :--- |
| (1) | alternative and acceptable answers for the same marking point |
| reject | Separates marking points |
| not | Answers which are not worthy of credit |
| IGNORE | Answers which are not worthy of credit |
| ALLOW | Answers that can be accepted |
| ( ) | Words which are not essential to gain credit |
| ecf | Underlined words must be present in answer to score a mark |
| AW | Alternative wording |
| ORA | Or reverse argument |

The following questions should be annotated with ticks to show where marks have been awarded in the body of the text:
Unless stated otherwise in the mark scheme, accept calculations which round to the mark scheme answer for full marks.

| Question | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: |
| 1 a | $\mathrm{N} \mathrm{kg}^{-1}$ | 1 |  |
| b | $\mathrm{N} \mathrm{m} \mathrm{kg}^{-1}$ | 1 |  |
| 2 | EITHER <br> red shift of light/radiation from (distant) galaxies; because galaxies are moving away from each other / have recessional velocity owtte ; OR <br> (uniform) microwave background; which is red-shifted light from early universe; | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | ignore references to expansion of the universe accept increase/stretching of wavelength as red shift accept galaxies moving away from Earth <br> accept cosmological microwaves accept radiation for light |
| 3 | $\begin{aligned} & \gamma=42 / 18=2.33 \\ & v=c \sqrt{1-\frac{1}{\gamma^{2}}} \\ & v=3.0 \times 10^{8} \sqrt{1-\frac{1}{5.44}}=2.7 \times 10^{8} \mathrm{~ms}^{-1} \end{aligned}$ | 1 <br> 1 <br> 1 | look for evidence of correct transposition of data sheet formula no ecf for incorrect $\gamma$ |
| 4 a | $\begin{aligned} & \text { initial } \mathrm{KE}=\frac{1}{2} 50 \times 200^{2}=1.00 \times 10^{6} \mathrm{~J} \\ & \text { final } K E=\frac{1}{2}(350+50) \times 25^{2}=1.25 \times 10^{5} \mathrm{~J} \approx 1.3 \times 10^{5} \mathrm{~J} \end{aligned}$ <br> inital momentum: $50 \times 200=1.0 \times 10^{4} \mathrm{~kg} \mathrm{~m} \mathrm{~s}^{-1}$, final momentum $=(350+50) \times 25=1.0 \times 10^{4} \mathrm{~kg} \mathrm{~m} \mathrm{~s}^{-1}$ | $\begin{aligned} & 1 \\ & 1 \\ & 1 \end{aligned}$ | accept $1 \times 10^{6} \mathrm{~J}$ <br> look for full working in calculations, not just final value accept 400 as final mass if $350+50$ shown elsewhere Iook for words like initial/before and final/after as labels to calculations of energy or momentum accept alphabetic suffixes e.g. i, b, for a to $p$ and $E$ as labels |
|  | work done deforming the spacecraft; | 1 | accept transfer to heat or thermal energy, ignore sound |
| 5 | C | 1 |  |
| 6 a | $\begin{aligned} & \hline-0.3(0) ; \\ & -0.3(0) ; \\ & (0.015-0.05 \times 0.45=)-0.0075 \approx-0.008 \\ & \hline \end{aligned}$ | $\begin{aligned} & 1 \\ & 1 \\ & 1 \\ & \hline \end{aligned}$ | allow ecf if $v=$ incorrect $\Delta v$ no ecf for incorrect $v$ |
| 6 b | any of the following: <br> - formula has effectively infinite number of steps <br> - not enough steps in the iterative calculation <br> - time interval too long in iterative calculation <br> - each iteration assumes constant speed | 1 | accept step-widths of zero time <br> ignore constant acceleration other than zero acceleration |

| Question | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: |
| 7 | evidence of suitable test e.g. is $\rho T$ constant; test applied to all data to 2 s.f. or 3 s.f.; $\begin{aligned} & 273 \times 1.29=352(350) \\ & 283 \times 1.25=354(350) \\ & 293 \times 1.20=352(350) \\ & 303 \times 1.16=351(350) \end{aligned}$ | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | accept calculations to more than 3 s.f with a conclusion which mentions that numbers are either not the same to 3 s.f. or the same to 2 s.f. <br> ignore any conclusion about the truth of the relationship |
| 8 | EITHER <br> measure time for half the sample to decay $\left(t_{1 / 2}\right)$, use $\lambda=\frac{\ln 2}{t_{1 / 2}}$; <br> OR <br> take a known number of atoms, measure activity and use equation given; <br> OR <br> measure gradient $(-\lambda)$ of a $\ln ($ activity $)$-time graph; | 1 | accept measure half-life from activity-time graph |
| 9 | B | 1 |  |
|  | Section A Total | 20 |  |

| Question | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: |
| 10 a | $\frac{m v^{2}}{r}=\frac{G M m}{r^{2}}$ <br> evidence of $v=\frac{2 \pi r}{T}$; <br> algebraic manipulation to final formula; | $\begin{aligned} & 1 \\ & 1 \\ & 1 \end{aligned}$ | $\begin{aligned} & \text { accept } m r \omega^{2} \text { as } \frac{m v^{2}}{r} \text { not } \frac{m v^{2}}{r}=-\frac{G M m}{r^{2}} \\ & \text { accept } \omega=\frac{2 \pi}{T}, v=r \omega, \omega=2 \pi f \end{aligned}$ <br> look for clear steps ignore loss of minus sign in final manipulation |
| b | $\begin{aligned} & V=\frac{4}{3} \pi r^{3}=1.098 \times 10^{21} \mathrm{~m}^{3} ; \\ & M=\rho V=2.7 \times 10^{3} \times 1.098 \times 10^{21}=2.96 \times 10^{24} \mathrm{~kg} \end{aligned}$ | $1$ <br> 1 | look for correct formula or evaluation <br> accept $3.0 \times 10^{24}$ with full working for [2] accept $V=1.1 \times 10^{21} \mathrm{~m}^{3}$ gives $2.97 \times 10^{24} \mathrm{~kg}$ for [2] |
| c i | any two points from: <br> - time for pulse to reach moon = time for pulse to return; <br> - radius of Moon / Earth is comparably negligible; <br> - speed of pulse is constant (throughout the journey) or Earth's atmosphere does not affect speed of pulse or pulse travels at speed of light in a vacuum $\left(3 \times 10^{8} \mathrm{~m} \mathrm{~s}^{-1}\right)$ or speed of light is constant ; | 2 | not distance for time, accept (laser) light for pulse <br> not just travels at the speed of light |
| ii | $\begin{aligned} & r=\frac{3.0 \times 10^{8} \times 2.5}{2}=3.75 \times 10^{8} \mathrm{~m} \\ & G=\left(\frac{4 \pi^{2}}{3.0 \times 10^{24}}\right) \frac{\left(3.75 \times 10^{8}\right)^{3}}{\left(2.4 \times 10^{6}\right)^{2}}=1.2 \times 10^{-10} \mathrm{Nm}^{2} \mathrm{~kg}^{-2} \end{aligned}$ | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | no ecf for incorrect value of $r$ $r=3.8 \times 10^{8} \mathrm{~m}$ gives $G=1.25 \times 10^{-10}$ or $1.3 \times 10^{-10}$ |
| iii | density / mass of Earth incorrect; need to use density of whole Earth / core and mantle are made of different material / density increases with increasing depth; | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | accept mass / density is too great accept orbit may not be circular for [1] ignore references to radius of Earth and Moon |
|  | Total | 11 |  |

| Question | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: |
| 11 a | molecules bounce off the ground; any two of the following <br> 1. each bounce transfers momentum to ground <br> 2. force on ground is rate of transfer of momentum <br> 3. pressure is force per unit area | 3 | accept collide with the ground <br> accept impulse as momentum transfer $I$ change ignore algebraic formulae e.g. $F=\frac{\Delta p}{\Delta t}, P=\frac{F}{A}, \Delta p=m v-m u$ QWC: first marking point |
| b | $\begin{aligned} & N k T=\frac{1}{3} N m \overline{c^{2}} ; \\ & T=293 \mathrm{~K} \\ & \sqrt{\overline{c^{2}}}=\sqrt{\frac{3 k T}{m}}=512 \mathrm{~ms}^{-1} \approx 510 \mathrm{~m} \mathrm{~s}^{-1} \end{aligned}$ | $\begin{aligned} & 1 \\ & 1 \\ & 1 \end{aligned}$ | not $k T=\frac{1}{2} m \overline{c^{2}}$ <br> ecf $T:=20 \mathrm{~K}$ gives $134 \mathrm{~ms}^{-1}$ for [2] allow $\overline{c^{2}}=2.62 \times 10^{5}$ for [2] |
| ii | any one of the following assumptions <br> 1. elastic collisions <br> 2. molecules impact surface at right angles to it <br> 3. all molecules moving at rms speed <br> evidence of use of $F=P A\left(=1.0 \times 10^{5} \times 0.56=5.6 \times 10^{4} \mathrm{~N}\right)$; EITHER <br> $F=\frac{\Delta p}{\Delta t}=\frac{2 n m \sqrt{c^{2}}}{1}$ and $n=1.2 \times 10^{27} \mathrm{~s}^{-1} ;(2)$ <br> OR $F=\frac{\Delta p}{\Delta t}=\frac{n m \sqrt{c^{2}}}{1} \text { and } n=2.3 \times 10^{27} \mathrm{~s}^{-1} ;(1)$ | 1 <br> 1 <br> 2 | $\sqrt{\overline{c^{2}}}=500 \mathrm{~m} \mathrm{~s}^{-1}$ gives $2.4 \times 10^{27} \mathrm{~s}^{-1}$ |
|  | Total | 10 |  |

| Question | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: |
| 12 a i | $\left(R=\frac{V}{l}=\right) \frac{6.0}{2.7 \times 10^{-3}}=2.2(2) \times 10^{3} \Omega$ | 1 |  |
| ii | EITHER <br> use of half-life $=0.69 R C=33 \pm 1 \mathrm{~s} / 53 \pm 1 \mathrm{~s}$; OR use of $R C=1 /$ drop time $=49 \pm 1 \mathrm{~s} / 69 \pm 1 \mathrm{~s}$; OR data from graph, use of $I=I_{0} \mathrm{e}^{-t / R C}$; $C=2.2 \pm 0.3 \times 10^{-2} \mathrm{~F}$ | $1$ <br> 1 | evidence of method [1] <br> correct answer [1] |
| b i | $\begin{aligned} & \Delta Q=C \Delta V=470 \times 10^{-6} \times 0.12=5.64 \times 10^{-5} \mathrm{C} \\ & I=\frac{\Delta Q}{\Delta t}=\frac{5.64 \times 10^{-5}}{60}=9.4 \times 10^{-7} \mathrm{~A}=0.94 \mu \mathrm{~A} \end{aligned}$ | $1$ <br> 1 | no ecf on incorrect $\Delta Q$ |
| ii | energy required; for an electron to break free (from an atom) / enter the conduction band / become a free electron / move freely within the insulator; | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | not just to get from one plate to the other |
| iii | use of $\ln I=\ln A-\frac{\varepsilon}{k T}$ to eliminate $A$; $\varepsilon=3.9 \times 10^{-20} \mathrm{~J}$; | $1$ <br> 1 | look for method which will eliminate $A$ [1] corrrect answer for [2] |
|  | Total | 9 |  |

| Question | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: |
| 13 a | large amplitude (vertical) oscillations; make it dangerous/unpleasant for occupants of lift ; | $\begin{aligned} & 1 \\ & 1 \\ & \hline \end{aligned}$ | ignore references to sideways oscillations / swinging accept break cables |
| $\square$ | use of $k=\frac{F}{x}$ or $F=k x$; use of $\frac{F}{A}=E \frac{x}{L}$ to obtain required expression | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | accept $k=\frac{F}{\Delta L}$ |
| ii | $\begin{aligned} & k=\frac{2.0 \times 10^{11} \times 2.5 \times 10^{-4}}{300}=1.67 \times 10^{5} \mathrm{Nm}^{-1} \\ & T=\left(2 \pi \sqrt{\frac{m}{k}}=2 \pi \sqrt{\frac{1500+640}{1.67 \times 10^{5}}}\right)=0.711 \mathrm{~s} \\ & f=\frac{1}{T}=\frac{1}{0.711}=1.4 \mathrm{~Hz} \end{aligned}$ | 1 <br> 1 <br> 1 | no ecf on incorrect $k$ <br> allow ecf if mass is just $1500 \mathrm{~kg}(1.7 \mathrm{~Hz})$ or $640 \mathrm{~kg}(2.6 \mathrm{~Hz})$ for [2] |
| c i | idea that damping requires friction / energy transfer from lift AND slowing down the lift / reducing efficiency of lift | 1 |  |
| ii | EITHER <br> reducing $L$ (to increase $k$ ); <br> raising $f_{0}$ (above 2 Hz ); <br> OR <br> increasing mass of load / cage; <br> lowering $f_{0}$ (below 0.2 Hz ); <br> OR <br> decreasing mass of load / cage <br> raising $f_{0}$ (above 2 Hz ) <br> OR <br> increasing csa of cables (to increase $k$ ) <br> raising $f_{0}$ (above 2 Hz ); <br> OR <br> use a cable material which is stiffer / increased $E$; raising $f_{0}$ (above 2 Hz ) | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | any realistic modification [1] which is explained [1] not increasing $L$ <br> not reducing csa of cables <br> not more elastic material <br> QWC against second marking point (organise information clearly) |
