GCSE

Physics A

Unit A182/01: Unit 2 – Modules P4, P5, P6 (Foundation Tier)

General Certificate of Secondary Education

Mark Scheme for June 2016
OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

Subject-specific Marking Instructions

a. Accept any clear, unambiguous response (including mis-spellings of scientific terms if they are phonetically correct, but always check the guidance column for exclusions).

b. Crossed out answers should be considered only if no other response has been made. When marking crossed out responses, accept correct answers which are clear and unambiguous.

   e.g. for a one-mark question where ticks in the third and fourth boxes are required for the mark:

   - [ ] [ ] [ ]
   - [ ] [ ] [ ]
   - [ ] [ ] [ ]
   - [ ] [ ] [ ]

   This would be worth 1 mark.
   This would be worth 0 marks.
   This would be worth 1 mark.

Marking method for tick-box questions:

If there is a set of boxes, some of which should be ticked and others left empty, then judge the entire set of boxes. If there is at least one tick, ignore crosses and other markings. If there are no ticks, accept clear, unambiguous indications, e.g. shading or crosses. Credit should be given according to the instructions given in the guidance column for the question. If more boxes are ticked than there are correct answers, then deduct one mark for each additional tick. Candidates cannot score less than zero marks.

**e.g. if a question requires candidates to identify cities in England:**

- Edinburgh
- Manchester
- Paris
- Southampton

The second and fourth boxes should have ticks (or other clear indication of choice) and the first and third should be blank (or have indication of choice crossed out).

<p>| | | | | | |</p>

</table>

**Score:** 2 2 1 1 1 1 0 0 0 NR

For answers marked by levels of response:

i. **Read through the whole answer from start to finish**

ii. **Decide the level** that best fits the answer – match the quality of the answer to the closest level descriptor

iii. **To determine the mark within the level**, consider the following:

<table>
<thead>
<tr>
<th>Descriptor</th>
<th>Award mark</th>
</tr>
</thead>
<tbody>
<tr>
<td>A good match to the level descriptor</td>
<td>The higher mark in the level</td>
</tr>
<tr>
<td>Just matches the level descriptor</td>
<td>The lower mark in the level</td>
</tr>
</tbody>
</table>

iv. Use the L1, L2, L3 annotations in RM Assessor to show your decision; do not use ticks.
Quality of Written Communication skills assessed in 6-mark extended writing questions include:

- appropriate use of correct scientific terms
- spelling, punctuation and grammar
- developing a structured, persuasive argument
- selecting and using evidence to support an argument
- considering different sides of a debate in a balanced way
- logical sequence

### Question 4

| Level 3 | States and explains the correlation **AND** describes at least two improvements. Quality of written communication does not impede communication of the science at this level. | 6 | This question is targeted at grade D/C
Indicative scientific points may include:

**Correlation:**
- Statement of correlation
- resistance decreases with more wires/paths/branches
- negative correlation

**Explanation of correlation**
- more wires gives more paths for current/electrons/charge
- greater cross sectional area
- easier for current/electrons/charge to get through
- Use of $V=IR$

**Improvements:**
- more wires / longer wires / thicker wires / other wire types
- repeat readings
- find mean/average reading
- control variables (use same meter, leads, temperature)
- connect meter to known resistor
- description of other suitable correct method
- someone else could reproduce the experiment

| Level 2 | States the correlation **AND** describes two improvements. Quality of written communication partly impedes communication of the science at this level. | 3 | 4 marks |

| Level 1 | States the correlation **OR** describes two improvements. Quality of written communication impedes communication of the science at this level. | 1 | 2 marks |

| Level 0 | Insufficient or irrelevant science. Answer not worthy of credit. | 0 |

**Total** 6

</table>
| **7**    | **[Level 3]**  
Gives reason for precautions **AND** states a feature of alpha **AND** states a feature of beta.  
Quality of written communication does not impede communication of the science at this level.  
(5 – 6 marks) | 6 | **This question is targeted at grades up to E**  
**Indicative scientific points may include:**  
**Need for precautions:**  
- radiation is ionising  
- damage living cells/ mutate  
- avoids contamination  
- kill living cells  
- cause cancer  
- break molecules into bits (ions)  
- β can get through skin and get to internal organs  
- makes you ill / harmful (partial credit)  
**Reasons for difference:**  
**Alpha**  
- α stopped by a few cm of air  
- α stopped by thin sheet of paper / outer layer of skin  
- α cannot get to internal organs  
**Beta**  
- β can travel about 1m through air  
- β stopped by thin sheet of aluminium  
- β can penetrate skin  
- β travels further than α comparative - so both types of radiation mentioned but only partial credit.  
**Ignore** references to gamma and X-rays  
**Use the L1, L2, L3 annotations in RM ASSESSOR**  
; do not use ticks. |
| **[Level 2]**  
Gives two from: reason for precautions **OR** states a feature of alpha **OR** states a feature of beta.  
Quality of written communication partly impedes communication of the science at this level.

</table>
| **Level 3** | More than one relevant statement made AND explanation given. Quality of written communication does not impede communication of the science at this level. | 6 | This question is targeted at grades up to D/C Indicative scientific points may include: Statements:  
- Scrunched up newspaper compresses / works like a crumple zone (or other example)  
- To reduce / absorb the force/shock/ energy  
Explanation:  
- Time taken to stop increases Distance to stop becomes longer  
- Slower momentum change due to deceleration  
- Loss of kinetic energy  
- Use of change of momentum= resultant force x time  
- Use of work done=force x distance  
Use the L1, L2, L3 annotations in RM ASSESSOR; do not use ticks. |
<p>| <strong>Level 2</strong> | Both relevant statements made OR an explanation given. Quality of written communication partly impedes communication of the science at this level. | 3 | |
| <strong>Level 1</strong> | One relevant statement made. Quality of written communication impedes communication of the science at this level. | 1 | |
| <strong>Level 0</strong> | Insufficient or irrelevant science. Answer not worthy of credit. | 0 | |</p>
