Unit **F763**: Global Issues

Advanced GCE

Mark Scheme for June 2017

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

© OCR 2017

Abbreviations, annotations and conventions used in the detailed Mark Scheme:

Annotation	Meaning
	Unclear
	Omission mark
	Issue identified (Section A)
	Strategy identified (Section A)
	Irrelevant, a significant amount of material that does not answer the question
	Level one
	Level two
	Level three
	No examples
	Rubric infringement
	Highlighting an issue e.g. irrelevant paragraph. Use in conjunction with another stamp e.g.  or 
	Point has been seen and noted

MARK SCHEME

Question	Answer	Marks	Guidance				
<p>Questions 1 - 6</p>	<p>Candidates should receive credit for a particular issue identified in the resource or a broader generic issue. However, this latter issue must originate from the resource, such as secondary impacts of hazards. Strategies must be appropriate to the particular issue identified for Levels 2 and 3.</p> <p>Balance between issue and strategies – given that ONE issue is required but STRATEGIES are to be included, most responses can be expected to have a balance of about quarter / three quarters issue / strategies.</p> <p>The inclusion of only ONE strategy will not reach Level 3 and is unlikely to go beyond bottom of Level 2.</p> <p>But this can not be prescriptive as the precise balance is likely to vary. Some responses will inter-mix issue and strategies, meaning that the response must be read carefully to disentangle the two. If communication is clear then this will help inform the Level.</p> <p>Annotate in the margin as follows;</p> <table border="1" data-bbox="322 1137 779 1273"> <tr> <td data-bbox="322 1137 533 1203" style="text-align: center;">I</td> <td data-bbox="533 1137 779 1203">for issue</td> </tr> <tr> <td data-bbox="322 1203 533 1273" style="text-align: center;">S</td> <td data-bbox="533 1203 779 1273">for each strategy</td> </tr> </table>	I	for issue	S	for each strategy		<p>For each question in Section A:</p> <p>AO1 Knowledge and understanding accounts for 4 marks AO2 Analysis, interpretation and evaluation accounts for 4 marks AO3 Investigate, conclude and communicate accounts for 2 marks</p> <p>Level 3 (9 – 10 marks) Substantial knowledge and authoritative understanding of an appropriate issue which must originate from the resource and using clear evidence from the resource. Clear application of relevant knowledge and understanding to the question set. Clear structure and organisation. Communication is clear with maps, diagrams, and statistics, if appropriate. Accurate use of geographical terms.</p> <p>Level 2 (5 – 8 marks) Sound knowledge and understanding of an appropriate issue using some evidence from the resource. Sound application of relevant knowledge and understanding to the question set. Sound structure and organisation. Communication is generally effective with maps, diagrams, and statistics, if appropriate. Geographical terms are mainly used effectively.</p> <p>Level 1 (0 – 4 marks) Poor knowledge and understanding of an appropriate issue using little or no evidence from the resource. Limited application of relevant knowledge and understanding to the question set. Poor structure and organisation. Much inaccuracy in communication and limited and / or ineffective use of geographical terms.</p>
I	for issue						
S	for each strategy						

Question	Answer	Marks	Guidance
1	<p>Earth Hazards</p> <p>Study Fig.1, which shows a hazard profile diagram of a major volcanic eruption at a destructive plate boundary</p> <p>Indicative Content One of the Questions for Investigation in this Option is ‘Volcanic eruptions are caused by plate tectonics and bring distinctive impacts to an area and these vary from place to place.’ Regarding the impacts candidates are expected to have considered that eruptions have ‘... a range of environmental and social impacts on the areas affected, which create a range of human responses to the hazard.’</p> <p>For L2+ responses need to pick up on the content of the diagram e.g. relatively high magnitude or it affects quite a large area which would relate to the ash ejected.</p> <p>Possible geographical issues include:</p> <ul style="list-style-type: none"> • High magnitude leading to primary impacts – lava flows; ash falls; pyroclastic flows; lahars + poisonous gases • Duration and areal extent has implications for human activities e.g. agriculture, settlement, transport e.g. effect on air traffic; loss of crops and livestock • Possible L3 indicator relates to the exact spatial predictability of source of eruption but not the areal extent of the ash for example. • Rare frequency raises the issue, should people live in hazardous zones? This may indicate a Level 2+ response. • Positive issue – fertile soils; tourism • Causes of volcanic activity e.g. destructive plate boundary; island arc <p>Possible management strategies:</p> <ul style="list-style-type: none"> • Monitoring e.g. of seismic activity + gas emissions + prediction of volcanic eruptions – can be related to the very predictable location of the site of the eruption and speed of onset • Education of local population • Evacuation and then coping with refugees • Land-use zoning around volcano based on hazard mapping • Diversion of lava flows; stopping lava flows e.g., spraying with water • Diversion of flights to avoid ash cloud 	10	<p>The issue identified can be either purely physical or human. Clearly the two sets of factors interact and so candidates have no shortage of material to draw from.</p> <p>If candidate answers in terms of ‘earthquake’ – no marks for the issue. Credit strategies up to a max of 6 marks.</p>

	Where if both long- and short-term responses included likely to indicate top of Level 2+ response.		
--	--	--	--

Question	Answer	Marks	Guidance
2	<p>Ecosystems and environments under threat</p> <p>Study Fig. 2, an extract about ecosystems and environments under threat.</p> <p>One of the Key Ideas in this Option is 'When human activity impacts of physical environments they may need to be managed in order to be sustainable.' The text introduces the idea that as a consequence of human activity, ecosystems and environments may lose their natural stability and require management if they are to recover and regain their stability. The extract is deliberately not set in a particular spatial context as candidates will have investigated a wide range of exemplars. Candidates can therefore select from their examples the issues and appropriate strategies to use in their responses.</p> <p>Indicative Content</p> <p>Possible geographical issues include:</p> <ul style="list-style-type: none"> • The threats posed by human activities to any components in the physical environment • When might the tipping point occur? • How severe might the instability be arising from crossing the tipping point? • The balance between economic and social demands such as food production, employment, health protection and environmental protection and conservation. • How protected should environments be? • Comments about these issues in terms of both intended and unintended ways a possible L2+ indicator. <p>Possible management strategies:</p> <ul style="list-style-type: none"> • From complete protection at one end of the spectrum through various levels of protection in order to manage sustainably. • Measures might be conservation, especially in the context of the impacts on elements in ecosystems such as individual species e.g. orang-utan in SE Asia or Arabian oryx • Measures might be planning controls such as operate in national parks, marine 	10	<p>The issue identified can be either purely physical or human. Clearly the two sets of factors interact and so candidates have no shortage of material to draw from.</p>

	<p>conservation zones or SSSIs.</p> <ul style="list-style-type: none"> Measures might range from trans-national strategies such as CITES agreement through to local government planning control on a greenfield site 		
--	---	--	--

Question	Answer	Marks	Guidance
3	<p>Climatic Hazards</p> <p>Study Fig. 3 which shows heavy snowfall in north-west London, 2010.</p> <p>Indicative Content</p> <p>One of the Questions for Investigation in this Option is ‘How do atmospheric systems cause heavy snowfalls and in what ways do they represent a hazard to people.’ Candidates are expected to have studied both the formation of heavy snowfall and the range of hazards this represents to people through blizzards and cold spells.</p> <p>Possible geographical issues include:</p> <ul style="list-style-type: none"> Impacts on human activities – economic and social dislocation; transport disruption Impacts on individuals e.g. deaths and injuries Impacts affect poor disproportionately more e.g. comments about fuel poverty appropriate; impacts on elderly also especially acute Causes of heavy snowfalls / blizzards e.g. intense depression; moisture laden cold air mass <p>Possible management strategies:</p> <ul style="list-style-type: none"> Forecasting – variety of measures e.g. geostationary satellites, radar. Long term strategies e.g. governments and NGOs prepare e.g. emergency supplies stock-piled; emergency services trained and equipped; Short term strategies e.g. warnings; closing of transport routes; closing of businesses, schools etc.; gritting of roads + pavements; medical services gear up for increase in admissions; power generation capability increased to cope with additional demand <p>Where both long- and short-term responses included likely to indicate top of Level 2+ response.</p>	10	<p>The issue identified can be either purely physical or human. Clearly the two sets of factors interact and so candidates have no shortage of material to draw from.</p>

Question	Answer	Marks	Guidance
4	<p>Population and resources</p> <p>Study Fig. 4 which shows population growth rates for three groups of countries, 2000 - 2050</p> <p>Indicative Content</p> <p>One of the Questions for Investigation in this Option is ‘How and why does the number and rate of growth of population vary over time and space?’ The associated Key Idea states that ‘Population is dynamic and changes in response to a number of demographic, social, economic and political factors. The factors vary from place to place.’ The graph shows how the population growth rates for three groups of countries have been changing and are projected to change through to 2050.</p> <p>Possible geographical issues include:</p> <ul style="list-style-type: none"> • Population-resource balance issues in terms of population growth in two groups of countries possibly placing a strain on resources e.g. food, clean water, housing, employment, education, health care • Population-resource balance issues in terms of contrast between LEDCs and NICs with the latter perhaps being in a more secure situation • Population-resource balance issues in terms of population stagnation and an ageing population placing a strain on resources e.g. medical care; pension provision; declining workforce numbers; housing <p>Possible management strategies:</p> <ul style="list-style-type: none"> • Population strategies to reduce growth in some places • Changes to population strategies to increase growth e.g. China’s relaxation of their policy • Investment in LEDCs and NICs in education and training to improve prospects for youth • Pro-natalist policies in MEDCs e.g. financial incentives such as tax breaks, subsidised 	10	<p>Candidates can deal with an issue and management strategies in a generic way e.g. trends, or they can use a particular example (s) from one of the groups (MEDCs, NICs, LEDCs) to illustrate an issue and strategies.</p> <p>However, a focus on just one point in time for one category of country is too narrow. The resource is clearly highlighting trends.</p>

	<ul style="list-style-type: none"> child care, paid maternity and paternity leave Investment in health care, housing for elderly Management of migration flows e.g. to allow inward flows of skilled migrants to supplement workforce in MEDCs 		
--	---	--	--

Question	Answer	Marks	Guidance
5	<p>Globalisation</p> <p>Study Fig.5, a cartoon about the impacts of the USA's membership of the North American Free Trade Agreement (NAFTA).</p> <p>One of the Key Ideas in this Option is that 'Globalisation of economic activity may bring advantages and disadvantages to various areas. These impacts may be environmental, economic, social or political.' The cartoon focuses on the disadvantages some people in the USA feel about NAFTA. Candidates are not expected to have studied NAFTA per se but will have considered a range of factors responsible for globalisation which includes free trade and outsourcing for example.</p> <p>NAFTA does not allow free movement of labour so migration is not an issue. The cartoon includes no references to migration – see the slogans on the placards.</p> <p>Indicative Content</p> <p>Possible geographical issues include:</p> <ul style="list-style-type: none"> Loss of employment, especially manufacturing, due to jobs migrating to lower cost areas – 'We want our jobs back!' Wages kept low due to competition from lower cost producers – 'Why should we have to compete with Third World wages?!' Pressure to reduce or highly control free trade – 'We need to reinstate tariffs!' Consumers might disagree with message of cartoon as they benefit from free trade via cheaper goods and services (outsourcing) – sets up tension within a country <p>Possible management:</p>	10	<p>Issue and strategies should be related to the impacts of globalisation on a MEDC (USA) which is clearly highlighted in the resource.</p>

	<ul style="list-style-type: none"> • Terms of agreements need careful negotiation • Increased training of workforce made unemployed by migration of jobs • Focus on comparative advantage of MEDC countries such as USA in high end manufacturing e.g. aerospace; bioengineering • Focus on service industries to replace loss of manufacturing employment 		
--	--	--	--

Question	Answer	Marks	Guidance
6	<p>Development and inequalities</p> <p>Study Fig.6, which shows global patterns of extreme poverty 1990, 2000 and 2015.</p> <p>One of the Key Questions for Investigation in this Option is ‘To what extent is the ‘Development Gap’ increasing or decreasing?’ The associated Key idea states that ‘Some areas are finding it very difficult to develop economically so the inequality gap between the richer and poorer areas is increasing, whilst others are developing rapidly, narrowing the gap. The graph shows changes in the % of the global population living in extreme poverty by major world region.</p> <p>Indicative Content</p> <p>Possible geographical issues include:</p> <ul style="list-style-type: none"> • Global inequalities have been increasing and some regions, e.g. sub-Saharan Africa, are finding it very difficult to decrease the level of extreme poverty. • Any of the factors (physical, economic, social or political) which might be influencing this pattern. • Responses could compare the changes to the levels of extreme poverty amongst the groups or focus on just one. <p>Possible management strategies:</p> <ul style="list-style-type: none"> • Sharper focus on development aid / projects which can lead to sustainable development. • Role of trans-national governments / organisations e.g. UN, World Bank, IMF, EU and 	10	<p>Issues and strategies should reflect the contrasts in economic development and inequalities highlighted in the resource.</p>

	individual governments. <ul style="list-style-type: none"> • Role of NGOs appropriate e.g. Christian Aid, Oxfam, Save the Children. • Comments that relate explicitly to raising income levels e.g. fair trade for small scale farmers, education and improvements in the role and status of women in Sub-Saharan Africa might indicate top of L2+ response. 		
--	--	--	--

Question	Answer	Marks	Guidance
7	<p><i>'In the 21st century, it is increasingly possible to manage the impacts of earth hazards.'</i> Discuss.</p> <p>Two of the Questions for Investigation are 'Why do the impacts on human activity of [earth] hazards vary over time and location?' and 'How can hazards be managed to reduce their impacts?' This question allows candidates to draw any and all of the earth hazards they will have investigated. The question uses the plural <u>hazards</u>, so this opens up the possibilities for candidates to evaluate flood management against dealing with earthquakes for example. There is, however, no expectation that a response will tackle all the possible earth hazards. A response discussing two hazards in detail has the same potential to reach Level 3 as one that ranges across several hazards. A candidate who considers only one earth hazard is unlikely to score beyond top of Level 1 in AOs 1 and 2.</p> <p>Indicative Content</p> <p>Responses might consider factors such as:</p> <ul style="list-style-type: none"> • Scale of hazard assessed in any number of ways e.g. energy released, areal extent, numbers of people affected • Degree of predictability e.g. contrast between earthquakes and volcanic eruptions • Economic development tends to go hand in hand with technological 	30	<p>AO1 Knowledge and understanding</p> <p>Level 3 (8-9 marks) Substantial knowledge and authoritative understanding of the management of earth hazards. There is secure use of detailed exemplification.</p> <p>Level 2 (5-7 marks) Sound knowledge and understanding of the management of earth hazards. Some responses might be assessed at this level if they offer a particularly uneven account of earth hazards e.g. focusing on just one with only a cursory mention of other(s). There is some use of exemplification.</p> <p>Level 1 (1-4 marks) Poor knowledge and understanding of the management of earth hazards. There is little exemplification. Some responses might only describe the management of one type of earth hazard.</p> <p>0 marks: no creditworthy response</p>

	<p>advances; technology can be seen as being important in terms of prediction, monitoring, mitigation and recovery</p> <ul style="list-style-type: none"> • The contrast in management capabilities amongst countries at different points along the development continuum • The growth in numbers of people, increasing population densities and population migration into hazard-prone locations 	<p>AO2 Analysis, interpretation and evaluation</p> <p>Level 3 (14-17 marks) Clear and convincing analysis of the management of earth hazards. There is effective evaluation of changes in the capabilities of humans to manage earth hazards.</p> <p>Level 2 (8-13 marks) Some analysis of the management of earth hazards. Some evaluation of changes in the capabilities of humans to manage earth hazards.</p> <p>Level 1 (1-7 marks) Limited analysis of the management of earth hazards. Little or no attempt to evaluate changes in the capabilities of humans to manage earth hazards.</p> <p>0 marks: no creditworthy response</p> <p>AO3 Skills and communication</p> <p>Level 3 (4 marks) Clear structure and organisation, including a clear conclusion. Communication is clear with authoritative use of grammar and spelling and accurate use of geographical terms. Maps, diagrams and statistics are used effectively, if appropriate.</p> <p>Level 2 (3 marks) Sound structure and organisation, including a limited conclusion. Communication is generally effective although errors in grammar and spelling and some inaccurate use of geographical terms are</p>
--	---	---

			likely to be present. Maps, diagrams and statistics are not used effectively. Level 1 (1-2 marks) Basic structure and organisation, with no attempt at a conclusion. Communication is ineffective with errors in grammar and spelling and little use of geographical terms or their inaccurate use. Maps, diagrams and statistics are not used. 0 marks: no creditworthy response

Question	Answer	Marks	Guidance
8	<p><i>To what extent do floods bring only environmental impacts?</i></p> <p>One of the Questions for Investigation is ‘What are the hazards associated with flooding?’ Associated with this is the Key Idea that ‘Flooding has a range of environmental, social and economic impacts on the areas affected.’</p> <p>The Specification is clear that this topic includes both river and coastal flooding.</p> <p>Indicative Content</p> <p>Responses might consider factors such as:</p> <ul style="list-style-type: none"> • environmental factors such as dispersal of water beyond the channel; scouring of channel leading to realignment of channel post-flood; reworking of sediment e.g. bars; spread of sediment over floodplain; • social factors such as mortality; injury; dislocation of communities e.g. people forced to leave their homes; disruption to education; disruption to health care e.g. cancelled operations, missed appointments • economic factors such as impact on agricultural land e.g. loss of flooded crops; loss of livestock; flooding of factories, warehouses, workshops, retailing, offices etc; disruption of transport; disruption of energy supplies; 	30	<p>AO1 Knowledge and understanding</p> <p>Level 3 (8-9 marks) Substantial knowledge and authoritative understanding of the full range of impacts of flooding. There is secure use of detailed exemplification.</p> <p>Level 2 (5-7 marks) Sound knowledge and understanding of the impacts of flooding. Some responses might be assessed at this level if they offer a particularly uneven account of impacts e.g. focusing on just one with only a cursory mention of other(s). There is some use of exemplification.</p> <p>Level 1 (1-4 marks) Poor knowledge and understanding of the management of the impacts of flooding. Some responses might only describe one type of impact. There is little exemplification.</p>

	<ul style="list-style-type: none"> • contrasts in impacts on countries at different points along the development continuum • different capabilities of dealing with impacts e.g. contrast between restoring traffic flows along a flooded road c.f. making a flooded house habitable. 	<p>0 marks: no creditworthy response</p> <p>AO2 Analysis, interpretation and evaluation</p> <p>Level 3 (14-17 marks) Clear and convincing analysis of the different impacts of flooding. There is effective evaluation of the relative environmental, social and economic impacts of flooding.</p> <p>Level 2 (8-13 marks) Some analysis of the different impacts of flooding. Some evaluation of the relative environmental, social and economic impacts of flooding.</p> <p>Level 1 (1-7 marks) Limited analysis of the different impacts of flooding. Little or no attempt to evaluate the relative environmental, social and economic impacts of flooding.</p> <p>0 marks: no creditworthy response</p> <p>AO3 Skills and communication</p> <p>Level 3 (4 marks) Clear structure and organisation, including a clear conclusion. Communication is clear with authoritative use of grammar and spelling and accurate use of geographical terms. Maps, diagrams and statistics are used effectively, if appropriate.</p> <p>Level 2 (3 marks) Sound structure and organisation, including a limited conclusion. Communication is generally effective although errors in grammar and spelling and some inaccurate use of geographical terms are likely to be present. Maps, diagrams and statistics</p>
--	---	---

			<p>are not used effectively.</p> <p>Level 1 (1-2 marks) Basic structure and organisation, with no attempt at a conclusion. Communication is ineffective with errors in grammar and spelling and little use of geographical terms or their inaccurate use. Maps, diagrams and statistics are not used.</p> <p>0 marks: no creditworthy response</p>
--	--	--	--

Question	Answer	Marks	Guidance
9	<p><i>To what extent does the level of economic and technological development influence impacts on physical environments?</i></p> <p>One of the Key Ideas in this Option is 'Why does the impact of human activity on the physical environment vary over time and location?' The Content associated with this Key Idea advises that a study should be made of 'why the impact on physical environments may be increasing or decreasing with economic, social and technological development.'</p> <p>Indicative Content</p> <p>Responses might consider factors such as:</p> <ul style="list-style-type: none"> • impacts of deforestation; high percentage loss of forest cover is in MEDCs e.g. UK as well as LEDCs e.g. Indonesia • impact of agro-ecosystems; intensive farming in MEDCs and some notable catastrophes e.g. Dust Bowl of mid-west USA; effects of poorly managed irrigation leading to salinisation e.g. parts of Pakistan and 	30	<p>AO1 Knowledge and Understanding</p> <p>Level 3 (8-9 marks) Substantial knowledge and authoritative understanding of the impacts of the level of economic and technological development on physical environments. There is secure use of detailed exemplification.</p> <p>Level 2 (5-7 marks) Sound knowledge and understanding of the impacts of the level of economic and technological development on physical environments. There is some use of exemplification.</p> <p>Level 1 (1-4 marks) Poor knowledge and understanding of the impacts of</p>

	<p>around Sea of Aral; role of organic movement in MEDCs in restoring environment</p> <ul style="list-style-type: none"> • drainage, often in association with agricultural development; loss of wetland habitats; • urban developments across the development continuum replacing physical environment by a built environment; not all negative though as some species adapt and thrive • atmospheric pollution; has been very bad in MEDCs but in 21st century, most air pollution in LEDCs and industrialising countries, especially in urban areas • water pollution; same comment as about atmospheric pollution 	<p>the level of economic and technological development on physical environments. There is little exemplification.</p> <p>0 marks: no creditworthy response</p> <p>AO2 Analysis, interpretation and evaluation</p> <p>Level 3 (14-17 marks) Clear and convincing analysis and evaluation of the impacts of the level of economic and technological development on physical environments.</p> <p>Level 2 (8-13 marks) Some analysis and evaluation of the impacts of the level of economic and technological development on physical environments.</p> <p>Level 1 (1-7 marks) Limited analysis and evaluation of the impacts of the level of economic and technological development on physical environments.</p> <p>0 marks: no creditworthy response</p> <p>AO3 Skills and communication</p> <p>Level 3 (4 marks) Clear structure and organisation, including a clear conclusion. Question	Answer	Marks	Guidance
15	<p><i>How far do you agree with the view that globalisation brings environmental disadvantages?</i></p> <p>One of the Key Ideas is that ‘Globalisation of economic activity may bring advantages and disadvantages to various areas. These impacts may be environmental, economic, social or political.’</p>	30	<p>AO1 Knowledge and understanding</p> <p>Level 3 (8-9 marks) Substantial knowledge and authoritative understanding of the environmental impacts of globalisation. There is secure use of detailed</p>

	<p>Indicative Content</p> <p>Responses might consider factors such as:</p> <ul style="list-style-type: none"> • economic restructuring in MEDCs led to deindustrialisation. This has brought both environmental advantages and disadvantages. Advantages = loss of polluting industry (air/water/land) and decline in mining / quarrying – reclamation of land. Disadvantages = derelict sites; contaminated land e.g. heavy metals. • economic restructuring in NICs and LEDCs led to industrialisation. Environmental disadvantages = pollution from mining / quarrying + manufacturing (air/water/land); loss of ecosystems / habitats. • increase in global trade led to increase in ocean shipping – atmospheric pollution from oil burning vessels + leaks of pollutants into water. Specific e.g. of oil tankers flushing their tanks on high seas. Port developments taken coastal / estuary environments. • increase in personal mobility via air travel brought environmental disadvantages e.g. GHG emissions. • globalisation brought about wider knowledge of other parts of the world for a great many people e.g. through increased tourism. Greater awareness of threats to ecosystems and environments which has given an impetus to protection and conservation. Funds generated in MEDCs flow through to NICs and LEDCs e.g. NGOs such as WWF. • globalisation brings other types of disadvantages e.g. social, economic or political 	<p>exemplification.</p> <p>Level 2 (5-7 marks) Sound knowledge and understanding of the environmental impacts of globalisation. There is some use of exemplification.</p> <p>Level 1 (1-4 marks) Poor knowledge and understanding of the environmental impacts of globalisation.
