

Candidate Marks Report

Series : 6 2018

This candidate's script has been assessed using On-Screen Marking. The marks are therefore not shown on the script itself, but are summarised in the table below.

Centre No :	Assessment Code :	J587
Candidate No :	Component Code :	01
Candidate Name :		

Total Marks : **42 / 60**

In the table below 'Total Mark' records the mark scored by this candidate.
'Max Mark' records the Maximum Mark available for the question.

Paper: J587/01		
Paper 42 / 60		
Total:		
	Question	Total / Max
		Mark Mark
1		0 / 2
2		1 / 1
3		NR / 1
4		1 / 2
5		1 / 2
6		1 / 1
7i		1 / 1
7ii		1 / 1
8		1 / 2
9		3 / 3
10		1 / 1
11a		1 / 1
11b		1 / 1
12		2 / 2
13		1 / 1
14		1 / 1
15		0 / 1
16		1 / 1
17		2 / 2
18		1 / 1
19		1 / 1
20		1 / 1
21a		5 / 5
21bi		1 / 1
21bii		3 / 4
22a		2 / 4
22b		6 / 6
23a		2 / 3
23b		NR / 4
23c		NR / 3

Section A

Answer all the questions.

- 1 Describe the function of alveoli.

.....turn deoxygenated blood into oxygenated blood by diffusion.....

TY

[2]

- 2 Fig. 1 below shows a diagram of the heart.

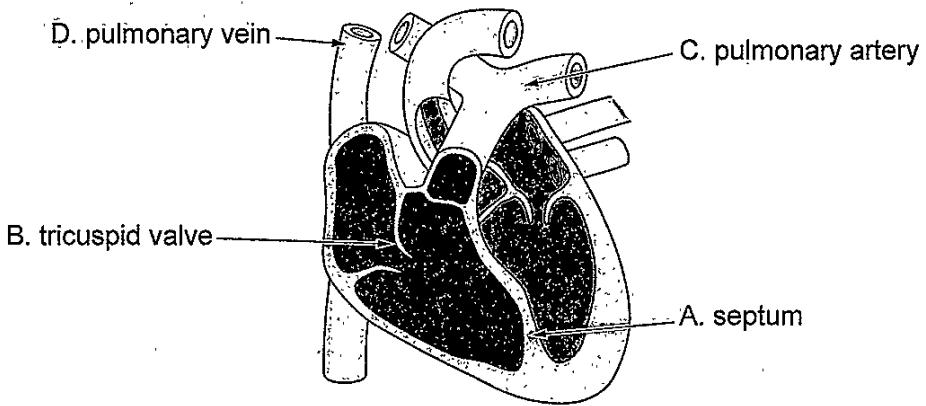

Fig. 1

Identify the part of the heart that is labelled incorrectly in Fig. 1.

.....pulmonary vein.....

- 3 Give a definition of a synovial joint.

SEEN

[1]

- 4 A rugby player will use their shoulder joint when making a tackle.

Name the two articulating bones in the shoulder joint that are at risk of injury during a rugby tackle.

1. clavicle
2. humerus

[2]

- 5 Reversibility is a principle of training.

Using a practical example, explain what is meant by the term 'reversibility'.

reversibility is for example when a football player that has been training at very high intensity through out all season and she suddenly stops training all the physical development and capacity will be lost -

- 6 Which one of the following shows the correct distances for the multi-stage fitness test and the test for speed?

Put a tick (✓) in the box next to the correct answer.

- A 30m for the multi-stage fitness and 25m for the speed test
- B 20m for the multi-stage fitness and 25 yards for the speed test
- C 20m for the multi-stage fitness and 30m for the speed test
- D 30m for the multi-stage fitness and 30 yards for the speed test

<input type="checkbox"/>
<input type="checkbox"/>
<input checked="" type="checkbox"/>
<input type="checkbox"/>

[1]

- 7 Fig. 2 shows a diagram of the lower leg.

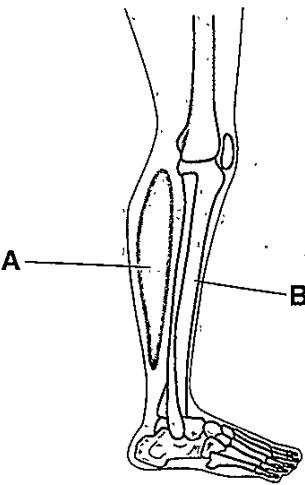

Fig. 2

Identify muscle A and bone B.

- (i) Muscle A: ...Gastronemius...
- (ii) Bone B: ...Tibia...

- 8 Identify two potential hazards in a swimming pool.

1. Slippery floor because of water.....
 2. Chemicals in the water.....

[2]

- 9 Using practical examples; explain the difference between the transverse and longitudinal axes of rotation.

The longitudinal axis runs vertically the body from top to bottom and the transverse axis runs the body horizontally from left to right.

The movement in a transverse axis is flexion & extension for example a high-diver performing a somersault.

On the other hand, the longitudinal axis the movement [3]

is rotation for example a ice skater performing a flat spin.

- 10 Give a practical example where aerobic endurance is important in sport.

Running a marathon.....

[1]

- 11 (a) Circuit training is a training method that consists of a series of exercise stations.

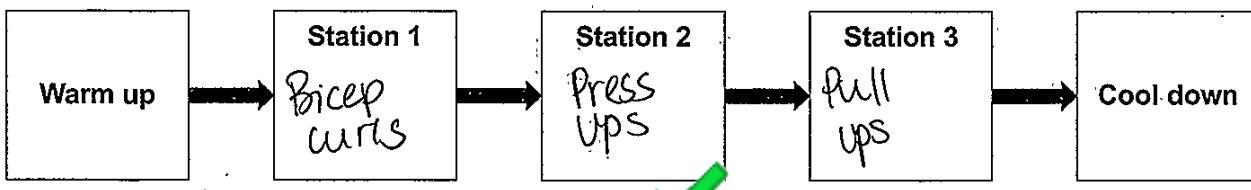

Describe one other feature of circuit training.

High intervals of rest and high intensity.....

[1]

- (b) Design a simple circuit training session to overload the upper body by completing the diagram below; placing one of the named exercises in each station.

Bicep curls	Lunges	Squats	Press ups	Pull ups	Step ups
-------------	--------	--------	-----------	----------	----------

[1]

- 12 Cartilage plays an important role in the skeletal system.

Assess how cartilage helps a marathon runner during performance.

Cartilage absorbs shock for example when running
it absorbs shock on the runners knees also
it prevents friction between the bones which
make easier for the runner to move [2]
the articulations and being able to run.

- 13 Which class of lever will a weightlifter be using when performing a bicep curl?

third class [1]

- 14 The performer in Fig. 3 below has performed a movement that has passed through the frontal plane.

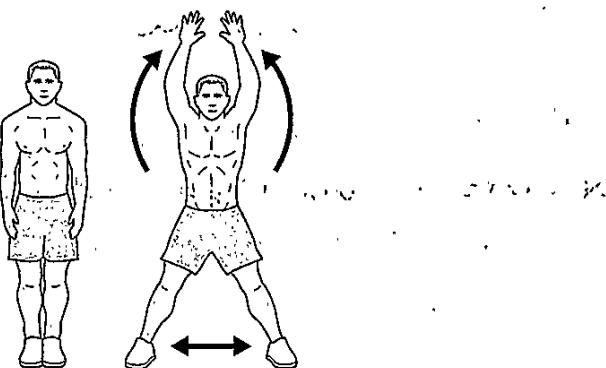

Fig. 3

Is this statement true or false? Draw a circle around your answer.

True

False

[1]

- 15 Which one of the following statements is false?

Put a tick (✓) in the box next to the correct answer.

- A Fixators help stabilise a joint and prevent unnecessary movement
- B Most lever systems in the body are 3rd class
- C A common hazard in rugby is concussion
- D Fartlek training improves speed and endurance

<input type="checkbox"/>
<input type="checkbox"/>
<input type="checkbox"/>
<input checked="" type="checkbox"/>

[1]

Turn over

- 16 Fig. 4 shows a diagram that highlights one plane of movement.

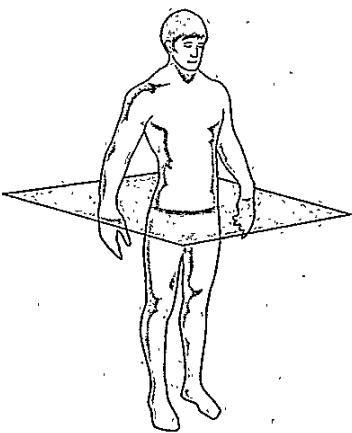

Fig. 4

Name the movement plane highlighted in Fig. 4 above.

.....transverse..... [1]

- 17 Describe a suitable cool down for a dancer.

.....pulse lowering after performing, for example.....
walking around the dance floor to keep the oxygen flowing to the working muscles.....
Stretching will help her to lower muscle temperature [2]
and to let oxygen flow through the muscles to prevent lactic acid

- 18 Give a practical example of how an appropriate level of competition can prevent injury to a performer in a sport or physical activity.

.....For example when wrestling if you are fighting against someone that has the same weight you will prevent injury caused by the weight difference. [1]

production for example stretching the hamstrings.

- 19 Fig. 5 shows a picture of the foot of a long jumper taking off.

Label Arrows A and B to correctly identify the components of this lever system.

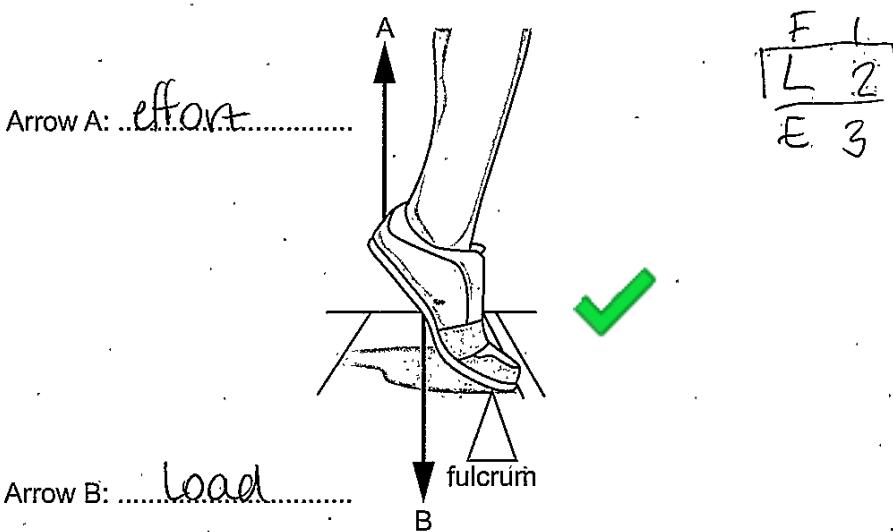

Fig. 5

[1]

- 20 The human heart is part of a single-circulatory system.

Is this statement true or false? Draw a circle around your answer.

True

False

[1]

Section B

Answer all the questions.

- 21 (a) Explain the short term effects on the heart and the blood of a swimmer performing a 100m front crawl.

The swimmer's heart rate will increase so more blood is pumped to the working muscles. The volume of blood pumped per minute (cardiac output) will increase and the volume of blood pumped per contraction (stroke volume) will increase too. The oxygenated blood will be redistributed to the working muscles^(arms, legs) by vasodilation (artery gets wider) so more blood flows and the less blood will be redistributed to the inactive muscles (stomach) by vasoconstriction (artery gets narrower) so less blood flows. This last process is called [5]

Vascular shunt mechanism

- (b) A swimmer who undergoes a six month training programme will experience muscular hypertrophy.

- (i) What is meant by the term 'muscular hypertrophy'?

Muscles get bigger and stronger therefore the swimmer will be able to swim for longer [1]

- (ii) Describe other muscular benefits the six month training programme might have for the swimmer.

Increase in muscular endurance will help the swimmer to be able to swim for longer REP and at a higher intensity

Increase in muscular strength will help the swimmer to push the water easily therefore she will be able to swim quicker

[4]

- 22 (a) Reaction time and speed are important fitness components required for a 100 m sprinter.

Define the fitness components of reaction time and speed and explain their importance to a 100 m sprinter.

Reaction time is how long takes the body to react.....

to a stimulus is important for a 100 m sprinter.....

because she needs to be able to react as quick.....

as possible so she can gain advantage when the

horn that indicates the start of the race is blown.....

Speed is how quick you are able to move.....

is very important for a 100 m runner because she needs

to be able to sprint as fast as possible when racing. [4]

(b)* Before an athlete participates in a sprint they will complete a warm up to prepare their body and mind for the race.

Using practical examples, describe the components of a warm up and evaluate the different mental preparation techniques that could be used to fully prepare the athlete for the race.

KU Pulse raising exercises during warm up will help the athletes to increase the volume of oxygen that goes to the working muscles and **KU** to raise the temperature of the muscles for example **EG** jogging around the track field at a steady intensity. After this, the athlete should **KU** stretch ~~so~~ to increase the mobility of the joints and prevent injury for example doing **EG** lunges. To raise muscle temperature, the **KU** athlete should do dynamic movements, for example, ~~sprinting~~ doing short sprints. Finally **KU** the athlete should do skill reversal, ~~so~~ to be able to prepare herself for the race for example practicing the post start position or the ~~leg movement~~ use of the proper technique to a better performance.

KU The athlete could use positive thinking during the warm up to gain confidence, for example thinking **DEV** about past races that she has won. Also, mental **KU** rehearsal can help the athlete to control anxiety **DEV** and to improve the performance afterwards, this means for example ~~on~~ imaging thinking and picturing **EG** the different techniques that she has to use. Finally **KU** imagery will help the athlete to control anxiety [6]

- 23 Fig. 6 below shows the respiratory rate for two hockey players before, during and after a match.

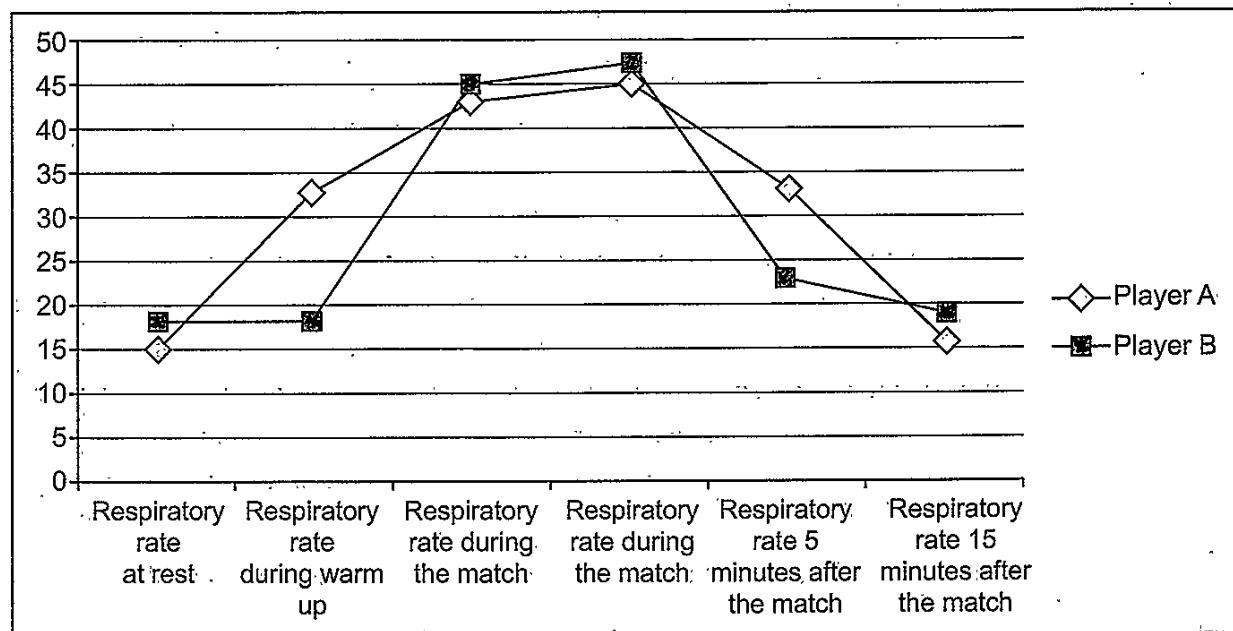

Fig. 6

- (a) Using the information in Fig. 6, analyse how the two players' respiratory rates compare and why they may be different.

Player A's respiratory rate is lower than player B's which suggest that player A is fitter because he doesn't have to breath as much. ✓

During performance player B's heart rate is higher which suggests that he has been performing at a higher intensity. ✓

After performance player A's breathing rate lowers slower than player B's

[3]

- (b) Explain the role of respiratory muscles during inspiration while player A is performing in the hockey match.

SEEN

[4]

- (c) Analyse the effects that lactic acid could have on the performance and recovery of the hockey players.

SEEN

[3]

END OF QUESTION PAPER

DO NOT WRITE IN THIS MARGIN

ADDITIONAL ANSWER SPACE

If additional space is required, you should use the following lined page(s). The question number(s) must be clearly shown in the margin(s).

22 b before performance and perform better for example picturing herself during training
in a place where she is calm.

L3

DO NOT WRITE IN THIS MARGIN.
