Introduction

These exemplar answers have been chosen from the summer 2018 examination series.

OCR is open to a wide variety of approaches and all answers are considered on their merits. These exemplars, therefore, should not be seen as the only way to answer questions but do illustrate how the mark scheme has been applied.

Please always refer to the specification https://www.ocr.org.uk/lmages/171195-specification-accredited-a-level-gce-english-language-h470.pdf for full details of the assessment for this qualification. These exemplar answers should also be read in conjunction with the sample assessment materials and the June 2018 Examiners' report or Report to Centres available from Interchange https://interchange.ocr.org.uk/Home.mvc/Index

The question paper, mark scheme and any resource booklet(s) will be available on the OCR website from summer 2019. Until then, they are available on OCR Interchange (school exams officers will have a login for this and are able to set up teachers with specific logins – see the following link for further information http://www.ocr.org.uk/administration/support-and-tools/interchange/managing-user-accounts/).

It is important to note that approaches to question setting and marking will remain consistent. At the same time OCR reviews all its qualifications annually and may make small adjustments to improve the performance of its assessments. We will let you know of any substantive changes.

For the purposes of this resource, we have used eight candidate scripts, which we have broken down and grouped as responses to individual questions. Please see below the overall marks each of those eight candidates received:

Script 1 (comprising of all Exemplar 1 responses) – 75 marks
Script 2 (comprising of all Exemplar 2 responses) – 70 marks
Script 3 (comprising of all Exemplar 3 responses) – 68 marks
Script 4 (comprising of all Exemplar 4 responses) – 64 marks
Script 5 (comprising of all Exemplar 5 responses) – 58 marks
Script 6 (comprising of all Exemplar 6 responses) – 55 marks
Script 7 (comprising of all Exemplar 7 responses) – 44 marks
Script 8 (comprising of all Exemplar 8 responses) – 27 marks

Question 1

1 Using the appropriate terminology to explain your findings, examine the language development stage of the child-participant as evidenced in the transcript. You should identify and analyse the phonology, grammar and meaning of his utterances.

Use your knowledge of theories and concepts of child language acquisition to support your answer. [20]

Exemplar 1 Level 5

. 1	In text A Rob is and his grandfather
	are hour interacting, and from his age
	of 3 years we expect Rob to just
	be entenne the post-tellgraphic stage
,	of grammar, as well as being in the
	pre-operational stage of liaget's Kinguistic
	development stages.
	The state of the s
	Initially it's close that Rob has goverall
	es standard pronounciation for a child of
	his age which supports be Piaget
	and Uygotsky's cognitive approach, as he
	has developed through each stage
	of language comprevension the Example of
	the Ysoep/ shews that he is physically
	able to produce the open sowel sound
	repeatedly if also shows that he is able
	to semantically link turtles with their
	sound, demonstrating Hallidays imaginitive
	speech finction and the fact that he
	is in the pre-of packaging stage of
	Achison's linguistic development as he
,	can make links beforeen words Despite
	this standard pronounciation, he struggles
	with the fricative sound of Fill as well
}	as the plasme "Thalloons F" instead using
	"/buins/" These difficulties show that

	while he is in the post-felographic stage,
<u> </u>	while he is in the post-telographic stage, he still struggles with more difficult
is	phonemes like 101. It is evident that los repeatedly has trouble with the
,	word "three" however he is able to produce
1,2 4	the "181" sound on at other times with "that"
	and also "three". This suggests that he
	struggles with the pronounciahan of "three"
	only when it's come of the time.
	Additionally Rob used addition when saying
	"dospie" which shows that he is able to
	produce the correct sound and also extend
	it to be attachanate towards the dag.
	In terms of grammar, Rob is around the
	expected cover, as the example of "can't"
\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \	shows that he is in the third stage of
	Hellugis stages of megative formation as he
1 1	is able to contract the "not" onto the
	verb. Farthermore, he is in the 30th third
	Stage of Bellugis pronoun development, as
	that he has es established me difference
	between the subject and object pronouns
1.00	to use. He is also very advanced in Browns
	stages of norphene aguisition as he is
	able to use the contraction "what's" at
	the beginning of the fext. Thee examples
	indicate that Rob 15 quite advanced
1 1	grammatically, however in some areas
	he is only using the incorrect conjugation
	of yelbs, form example "I got it now"
	and "I hide" where he mixes up
	past and present tenses. This would
	suggest that he is still aguiring areas
E [TALLUV THE LOUGOROMART PLACE. Thousand This I

		of it the telegraphic stage, though this
		is understandable as he is only just
		entering the post-telegraphic stage
,		In other examples he is able to use
	<u> </u>	correct conjugations like 4 the balloons are
		coming" which shows that he has
	`	developed the early stages of Brown's
		marphene development and that his
		inconsistencies are a result of his
	. '	young age. His inconsistency goes against
		the social inter habitist approach because
		he should theoretically be able to
		apply standard grammas rules. Throughout
	<u> </u>	the text but is unable to
	, ,	1. 2. 2. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1.
	L /	Semantically her in has progressed
·		Through Archison's labelling Stage Fully
		with "snap onep snap" and "mister"
	·	with "snap onep snap and "mister"
٠,		deggie and he does not show
	<u> </u>	any signs of Rescorta's over extension
	·	rosegories, which emphasizes his
_ ·	<u> </u>	post-telegraphic stage. Furthermore he is
<u></u>		displaying the use of regulatory
		post-telegraphic stage surthermore he is displaying the use of regulatory language man watch me and personal
	<u> </u>	·

		language " I hide all of the balloons"
		which shows he is engaging with his
	<u>' }</u>	grandfather and his environment. The
	is the	correct use of the sequence " fothere
		Penri ful six" also shows support for
	·	the behaviourist theory, as he has
	,.	learnt from observation perhaps through
		role models or television how to count
	<u> </u>	It it seems that he actually understands
	<u>.</u>	his use of numbers too, the which shows
	,4 .	that he has used observed and killy
1 1 1		

	understood the language be is using
,	as he wasn't just repeating his
	grandfather's reference. He also seems
	to understand pragmatic meaning
	- because after he uses Done's linguistic
* >	purpose of protesting ino" he recognizes
	his grandfathers trains intenation
	(that is not verbal) as to and chooses
	to leave, suggesting that he understands
	pragmatics:
] ,] ,	

Examiner commentary

This answer was awarded full marks. For AO1, there is assured reference to a wide range of language features and concepts, which is essential for the top level (e.g. fricatives, laterals, dipthongs, consonant clusters, reduction, negatives, contractions, pronoun usage, morphemes, tense usage and sequencing), with well-chosen evidence to support points made. The answer is enhanced by consistently accurate use of terminology and a secure academic register throughout. The three levels (phonology, grammar, meaning) are fully and clearly addressed. There is evidence of focussed analysis, again a requirement for this level. For example, Rob's inconsistency in correctly enunciating the /th/ phoneme (not generally picked up in weaker answers) is convincingly linked to nativism and contextual factors, and the use of sequencing to behaviourism. For AO2, there is an equally assured reference to stages of development (post-telegraphic, pre-operational, 3rd stage of negatives formation) with well-chosen evidence. There are perceptive links to a wide range of concepts/theories suggesting a secure understanding of these (Piaget, Vygotsky, Halliday, Aitchison, Chomsky, Bellugi, Rescoria, Skinner). With a full address of the question, a focussed analysis of language with accurate terminology and clear/convincing links to theory, this answer fulfils all the requirements of the top level. AO1: 10 marks; AO2: 10 marks.

Exemplar 2 Level 5

1	Phonologically Robs language is fairly
	Jupical of sameans his age, Whenever Rob
	attempts to say "three", he repaires me

Examiner commentary

This is another top level response, which for AO1 was awarded full marks. As with Exemplar 1, there is confident reference to a wide range of language features, with well-selected examples and a focussed analysis. All three levels specified in the question are addressed. The response is enhanced by consistently accurate use of a wide range of terminology not commonly seen in other responses (e.g. liquid consonants, inflectional suffixes, predicate overextension, receptive and productive vocabulary), demonstrating unusually assured understanding. Evaluation of Rob's language is focussed and convincing, for example his inconsistencies with auxiliaries are fully exemplified and analysed as is the concept of 'hiding' the balloons, which is linked to his stage of development. For AO2, there is an equally assured reference to Rob's stage of development throughout, with well-selected examples to enhance points made. However, links to theory, while secure, are somewhat scattered and lack the perception and breadth required for full marks. AO1: 10 marks; AO2: 9 marks.

Examiner commentary

This response displays a confident application of methods, however lacks the range of appropriate terminology covered in Exemplars 1 and 2 and the focussed analysis of these answers. The three levels specified in the question are covered, however there is a greater focus on phonology than on grammar and meaning. For example, Rob's use of labelling, numbering and determiners is not commented on. There is some relevant commentary on the grandfather's intervention, however this is not clearly linked to Rob's language development. Whilst reference to stages of development are fairly limited in comparison to Exemplar 1, they are accurate, and there are consistent valid connections made to a number of theories and concepts (again, however, lacking the range of Exemplar 1) which propel the answer into the Level 5 category. This is a strong answer which displays sound knowledge and understanding but lacks the impressive assuredness and depth of analysis displayed in the previous Exemplars. AO1: 9 marks; AO2: 8 marks.

Exemplar 4 Level 5

1	星	Rob striggles with the pronounciation of certain consonants
		such as the velar consonant in in "snap", which he promounds
		"s sep", and the consonant cluster "ng", which is deleted
		from the vocate present participe playing. It is pronounced
		"pern" instead. Rob's grandfather attemps to correct him
		by responding with the web "played"; which links to Summer's
		breary that children born language depending on how much
ļ,	ļ	they are remarked or corrected for their language. It's a fulled
		attempt, as Rob is focused on the game. This sorugge to
		pronounciate hiese consonants could indicate their Robista
	ļ	the telegraphic stage, but as he is 3 years old he is likely
,	<u> </u>	à just nearing post-telegraphic stage.
		Rob frequently makes gammatical ellipses of the auxillary
		veh, for example "I going to", which ellips the auxillary "am",
		and "wealt going", which ellips the auxillary "are = . This
	<u> </u>	ellipsis of the restandant hie auxiliary conjugated from
·	1.	'to be is not always ellipted homever, as Rob says "lotsog
	<u> </u>	balloons are coming up. This shows he is capable of
<u>;</u>		using an ourillary verb. Contextually, Rob is 3 years old and
	<u> </u>	50 it is likely that he is in the post-telegraphic stage.
·	<u> </u>	Furaier grammatical evidence in Rob's language which
· · · · · · · · · · · · · · · · · · ·		proves this is that he is able to cornectly construct a
		negative, for example "you can't see me now". According to

	familiar with Rob. Rob might respond better to a pavent
,	who uses child-directed speech, as the grandfuther appear
	to not conveye his speech to Roos, going against Vygotskyk
,	Grean of scappolding.

Examiner commentary

This is a strong response which makes assured reference to a wide range of language features, using appropriate examples and a focussed analysis. Consistently accurate terminology is used. Therefore, full marks were awarded for AO1. Commentary on the grandfather's intervention is clearly linked to theory in relation to Rob's language development and is therefore credited. There is an acknowledgement of Rob's inconsistently accurate use of the auxiliary verb, not always picked up in weaker answers, and this is linked to his stage of development. The three levels specified in the question are addressed equally. Less assured answers will often be unbalanced in favour of one level. For AO2, there is assured and sustained reference to stages of development with well-selected examples. These are at times linked well to theory and/or concepts, suggesting a secure understanding of these, however links are not sufficiently discerning as to warrant full marks. It is again noteworthy that the conclusion, being simply a summary of previous commentary, is not credited. AO1: 10 marks; AO2: 9 marks.

Examiner commentary

This is a good example of a solid Level 4 response. For AO1, there is consistently accurate reference to a range of language features from the three levels specified in the question (pronouns, auxiliaries, tense formation, fricatives, consonant clusters, interrogatives, imperatives, declaratives). These are reasonably well-evidenced, showing a good, if not always entirely secure, understanding. There is less focus on meaning than on the other two levels, for example, Rob's use of labelling and sequencing is not mentioned. Terminology is, in the main, accurate, barring some scattered errors (pronouns are inaccurately termed as function words, for example, and 'to have' as an auxiliary rather than an infinitive). Evidence is at times insubstantial, for example, Rob's declarative 'Yes I got it now' is described as being in the present tense, its grammatical inaccuracy going unacknowledged or unexplained. There is some developed analysis, however this is again not consistent. For example, the assertion made in relation to Rob's use of consonant cluster reduction and a consonant-vowel pattern is not fully explained. That said, there is, in the main, a sound evaluation of language throughout. References to stages of development are present in the piece and generally accurate. There are some relevant connections to theory in relation to development, for example, Rob being in the 3rd stage of Bellugi's negatives is well-evidenced, as is the connection to Grunwell. Elsewhere in the answer, however, references to theory are less secure and more generalised. For example, the connection made to Skinner is unconvincing, as is the link to Chomsky which is not fully explored. All in all, a mostly good understanding and knowledge is displayed, however not consistently so. For this reason, the answer remains securely in the Level 4 category. AO1: 8 marks; AO2: 7 marks.

Examiner commentary

A good example of a straightforward Level 3 response. There is generally accurate and developed reference to language features, although some confusion around what constitutes an auxiliary verb and the future tense is displayed. The three levels specified in the question are addressed, using appropriate examples, thus allowing access to the Level 3 category. Terminology, however, is not dense and is at times loose or indistinct. In addition, there is some unhelpful analysis in places. For example, discussion around Rob's usage of auxiliary verbs is confusing, using poorly chosen evidence, thus displaying an insecure understanding of this language feature. Similarly, commentary on Rob's phonological development is rather clumsily expressed. That said, there are some valid points made which are credit-worthy, for example Rob's use of onomatopoeia is well understood and exemplified, as is his use of sequencing. AO2 was stronger here, although still in the Level 3 category. Generally accurate reference to stages of development are

made in places, connecting elements of Rob's language usage to theory (eg, Bellugi and Halliday). This is not, however, consistent or varied enough as to warrant a higher mark. AO1: 5 marks; AO2: 6 marks.

Exemplar 7 Level 3

	Since Rok is three years old he
	is likely to be in the telegraphic
	moning into post-telegraphic
	stage og language development.
	This is supported by his
	undestanding of complete grammatical
	structures such as contraction, e.g/
	"Bhots", "cont" and "its", so well
	os repotion, conto and enor (Bellugi).
	However, Rob still makes

Examiner commentary

This is a more solid Level 3 than Exemplar 6, mainly due to denser use of terminology and a greater range of features discussed, with exemplification. Had the analysis of these features been slightly more detailed, the answer could have accessed the Level 4 category. Rob's use of imperatives, for example, is acknowledged and exemplified, but not convincingly evaluated. Similarly, the analysis of Rob's consonant cluster reduction remains undeveloped. Connections to theory are mostly valid and relevant, but not sufficiently secure as to warrant entry into the Level 4 category. Rob's use of negation, for example, is correctly linked to Bellugi but without any real explanation or supporting commentary. For these reasons, the answer remains securely in the Level 3 category. AO1: 6 marks; AO2: 6 marks.

Examiner commentary

This answer does not fully engage with the question and therefore is unable to be awarded higher than a Level 2 for AO1. There is some generalised commentary on phonology and meaning with some clear identification of stages of development which allows the answer to access the Level 3 category for AO2. The one reference to grammar (Rob's use of negation) is incorrect and therefore not credit-worthy. Terminology is lacking and at times inaccurate. There is one valid connection to a theoretical concept (labelling), with an appropriate link. However, there is no reference to other theories or concepts with which to award a higher mark for AO2. AO1: 3 marks; AO2: 5 marks.

Question 2

2 Using your understanding of relevant ideas and concepts, investigate how language features and contextual factors construct meanings in this text.

Examiner commentary

Although a strong answer, this lacks the consistent assuredness and critical engagement of the responses to questions 1 and 3. There is informed comment on patterns of language (e.g. the semantic field of danger, declarative sentence construction, unmitigated imperatives, polysyllabic lexis) which are clearly evidenced and linked convincingly to a number of contextual factors. This propels the answer into the Level 5 category for both AOs. There is intelligent comment on reception and production with a detailed analysis in places of how language features may impact upon how the text is received. For example, the use of clear and unambiguous declarative statements is linked to the assumed non-specialist nature of the audience and the multimodality of the text to the self-selecting reader, who may require a 'user-friendly' and highly accessible approach. There is convincing commentary on the power behind some of the language used (imperatives) and a recognition of the relevance of the online context of the text. However, knowledge shown of concepts is 'good' rather than 'assured'. The relevance of graphology, for example, which is a key feature of this text, is inadequately explored. The accompanying image, reinforcing the message of the text, is ignored, as are the graphological features of the text that are characteristic of the genre, e.g. the links to social media. Instead, graphology of the text is linked to paragraph structure in a fairly generalized and unconvincing way. Similarly, discussion on synthetic personalization is relatively straightforward. Thus, although there is some detailed analysis in places, the response is not so consistently evaluative as to be awarded in the top level. AO2: 10 marks; AO3: 9 marks.

Examiner commentary

A good (as opposed to assured) knowledge of concepts is shown here, with some informed comment of patterns which propels the answer into the Level 5 category for AO2. For example, the producer's use of direct address, imperatives and modal verbs are discussed and well exemplified., with some convincing links to context. Use of terminology is less assured than in Q1 and there are some errors (e.g. dynamic modal verb'can' and second person pronoun 'we'). Such errors prohibit a top level mark for AO2. For AO3, whilst contextual conclusions around power are sound, they are repetitive and the conclusion at the end merely repeats what has already been said and is therefore not credited. Candidates are advised to avoid the inclusion of redundant introductions and conclusions which do not serve to add any meaningful commentary to the response. AO2: 10 marks; AO3: 7 marks.

Examiner commentary

Although an unfinished answer, there is a sound level of knowledge and understanding of concepts shown here, with some convincing analysis and commentary on patterns. The accompanying image reinforcing the message of the text is clearly understood, as are the graphological features that are characteristic of the genre, e.g. hyperlinks and links to social media. Patterns are clearly established (high-frequency and field-specific lexis, pronouns, imperatives) and there is insightful evaluation of why these patterns would be appropriate in this online article (through a comparison with more impersonal methods, such as the passive voice). There is recognition of the implicit references to influential power within the language used, and how this may speak to the existing anxieties of the audience around online privacy. While AO2 was awarded in the Level 5 category, AO3 remained securely in the Level 4 category, making a sound rather than a detailed response to contextual factors (perhaps as a result of time constraints). It is worth noting that the first few sentences of the response are copied almost verbatim from the rubric – this is never credit-worthy and can time spent on this can lead to rushed or incomplete answers. AO2: 10 marks; AO3: 8 marks.

Examiner commentary

There is a sound knowledge shown of concepts here, although these are somewhat limited in range in comparison to previous Exemplars. There are the beginnings of analysis of patterns used, namely the lexical field of technology and second person pronouns, which just about allow the answer to access the Level 5 category. Overall, however, knowledge of a limited number of concepts is sound, as opposed to good, and there would need to have been a greater range of concepts discussed and greater critical engagement with these for the answer to access the top band. AO3 remains in the low Level 4 category. While attempts to respond to contextual factors and features are sound, they tend to be repetitive (issues of power behind the discourse are laboured) and in places are not convincing (the link made between neologisms and synthetic personalization, for example, is not clear). Candidates should be advised that contextual points made more than once are rarely credited more than once. AO2: 9 marks; AO3: 7 marks.

Examiner commentary

Again, this is a solid Level 4 answer. There is a sound level of knowledge and understanding shown of relevant concepts and this is used to comment on some language features in the text. The multi-modality of the text is well understood and linked to its purpose to raise issues about the nature of computer technology, and to play on the fears of the audience about online privacy. Attempts to root language in this representation are essentially convincing (lexical fields, imperatives, pronouns, modality). Patterns, however, are not clearly established or explored, therefore this remains a Level 4 answer for AO1. The link to power is also represented, with the influential and instrumental power of the BBC well interpreted. Contextual conclusions, if at times repetitive, are generally convincing. For example, the point made about the binary opposition of the BBC and the 'fraudsters', thus creating a sense of member's resource with the audience, shows insight. More detailed analysis such as this would have propelled the answer into the Level 5 category for AO3. In the main, however, contextual conclusions remain sound, as opposed to detailed, thus positioning the answer securely in the Level 4 category. AO2: 8 marks; AO3: 8 marks.

Examiner commentary

This answer displays a knowledge and understanding of concepts which is largely missing from Q1. There is some informed commentary on patterns, with some convincing analysis, which allows the answer to securely access the Level 5 category for AO1. The semantic field of crime and field-specific lexis of technology present within the text is securely identified with appropriate examples, as is the multi-modality of the text. Patterns of explanatory declaratives and imperatives are established, and their usage explored, with clear links to context. Analysis of the latter as being unmitigated and an evaluation of the reasons for this in relation to reception shows insight. Other patterns of language use identified are listing and vocatives, and again clear contextual links are made. References to the influential and instrumental power of the BBC are convincing, as is commentary on the electronic context of the text and its graphological features. Overall, this is a comprehensive response, which reveals a sound knowledge and understanding of the relevant concepts. AO2: 10 marks; AO3: 9 marks.

Examiner commentary

This answer remains in the Level 3 category, being largely assertive or with undeveloped analyses. Knowledge of language features, whilst generally accurate, is limited, and commentary is general as opposed to detailed. Some valid points made, for example, on the producer's use of declaratives and graphology, are unexemplified. The use of the triad structure is correctly identified and exemplified, but the accompanying analysis lacks depth. Contextual factors are laboured and at times undeveloped. Writing is uneconomical. All in all, the answer lacks the depth of analysis and focussed discussion required of a higher level. AO2: 6 marks; AO3: 5 marks.

Examiner commentary

This is also a Level 2 answer. A vague understanding of concepts is shown with very few secure connections to language features in the text. The lexical field of computing is alluded to, but not exemplified or commented on in any meaningful way. Only a basic understanding of contextual factors is shown. The contextual factor of instrumental power is alluded to, but no convincing connections are made. Whilst the topic of the text is identified, there appears to be little understanding of its underlying message, or how any contextual features within the text may contribute to meaning. For these reasons, this answer remains securely in the Level 2 category. AO2: 4 marks; AO3: 4 marks.

Question 3

3 By detailed analysis of the writing in both passages, discuss and illustrate the variations in language between the 19th and 21st centuries. In your answer you should explore the ways language is used in each text, as well as how contextual factors influence the way meaning is constructed.

This response achieved full marks. It applies a range of appropriate methods assuredly and systematically, using appropriate terminology and a secure academic register. Patterns of language are established and there is well-chosen evidence, which is perceptively analysed. There are discerning points made about contextual factors in relation to language use, with perceptive evaluation of these. There is a selective and methodical application of linguistic concepts across texts with perceptive connections which clearly establish language change.

The question focusses on the variations in language use between the 19th and 21st centuries. Candidates are asked to discuss and illustrate these, through an exploration and comparison of language use and contextual factors. This response immediately launches into a comparison of the contextual features surrounding both texts, with no redundant introduction (often found in weaker answers) which is usually a mere paraphrase of the rubric. This focussed analysis remains consistent throughout the answer. For AO1 and AO4, a range of linguistic methods/concepts are applied and compared across the texts, including lexis (terms of address, pre-modification, Latinate and high-frequency, neologisms, broadening); sentence types; verb choices and discourse, with clear establishing and exploration of patterns. Evidence is well-chosen and perceptively analysed. There is a recognition of the significant difference in tone that exists between the texts and the reasons for this – Text C being a legal document whereas Text D is an online article, hence the lack of emotion in the former. This is linked perceptively with reception. That said, there is a discerning point made about the language used in Text D as remaining formal, despite the underlying emotive tone, again linked convincingly to the audience. The bias that exists within both texts is recognised and evaluated, as is the primary nature of Text C as a legal document, as opposed to the outsider's point of view represented in Text D. The foregrounding of the US names in Text C is convincingly linked to the contextual nature of the piece and contrasted with the use of Proper Nouns (Clark) and abbreviations in Text D (DAPL), demonstrating a shift from the impersonal to the personal. The concept of language change is discussed throughout, exemplified by way of neologisms in Text D, use of the passive tense in Text C versus the active and dynamic verbs of the comparison text, sentence construction, the plentiful Latinate lexis of the older text versus the emotive language of its comparison, with semantic broadening. All in all, this is an excellent response which fully addresses the question and all three AOs in a methodical and assured manner. AO1: 12 marks; AO3: 12 marks; AO4: 12 marks.

This is a strong answer which applies a range of appropriate methods confidently and accurately, using wide-ranging terminology and exploring patterns of language encompassing lexis, semantics and grammatical items with well-chosen evidence throughout. Again, terminology is accurate and varied, while perhaps lacking the assured breadth and range of Exemplar 1. The use of adjectival address to separate races in Text C is well analysed and the discerning point is made of its binary nature. There is informed comment on patterns of language, for example, the repeated use of the first and second person pronouns in the quote from Clark is linked to its personal, apologetic agenda and contrasted with the more formal and impersonal nature of the titles/use of the third person throughout in the comparison text. There are a few unconvincing contextual comments made in relation to language use (e.g. the use of the metaphor 'human shields' in Text D is linked to a lack of bias, when in fact it is the opposite), however these are in the minority and the majority of points made on contextual factors are secure. The response is weaker in terms of AO4 and there is insufficient focus on language change to warrant a mark in the top level here. That said, there is a methodical application of linguistic concepts and helpful connections are made in places (e.g. the use of marked terms such as 'Indians' as being reflective of the historical context of Text C and now considered to be politically inappropriate is well understood). All in all, however, the answer focusses mostly on difference in language, with an insufficient address to change, and therefore could not be awarded in the top level for AO4. AO1: 12 marks; AO3: 12 marks; AO4: 10 marks.

Examiner commentary

A very impressive response which was awarded full marks for AO4. Language change is clearly addressed and exemplified through the use of neologisms in Text D, compounding of words and the use of marked terms in the context of the heightened political correctness of the modern day. Comparison of texts is established from the outset through differences in genre, tone, sentence structure and temporal context. Patterns of language are deftly established, the abbreviated nature of the lexis in the modern text being contrasted with the multiple proper nouns and full titles of its comparison. The emotive lexis of Text D, well-evidenced from the text, is contrasted with the more formal register of the older text. Whilst patterns are well established however, the response lacks the range of methods and the breadth of terminology which is seen in Exemplars 1 and 2. For that reason, full marks were not awarded for AO1. Similarly, whilst commentary on contextual factors is strong and helpful, and there is weighing up of how the temporal contextual factors of the texts may account for language variations, these could not be considered sufficiently discerning or perceptive for the top level. AO1: 11 marks; AO3: 10 marks; AO4: 12 marks.

Exemplar 4 Level 5

60 OCR 20

	In text C, there is lots of archaic and low frequency
	lexis, for example "clase"; "annuities" and "upon".
	Praymenticulty, his eventes a more academic register and
<u> </u>	makes the text appear more formal. Contestually, the text
,	is therefore less accessible to those with a lower level
	of English Native Americans, as a generalization, have
	open been at a disadvantage with regards to education.
	In the contest of this text, it is clear that the American water
	Government had power behind the discover as most
	Native Americans would have not been able to easily
	access or unsertand this text, therepre not understand
	their rights Even though the leader of the Sion Wative
	American Indians made the treaty with the government,
,	they were still in a time where access to education
,	was low, they literay rutes were low.
	In comparison, text D features many reologisms and
	also less that has undergone sensentic differentiation,
	as well as more informal less where there is clipping,
	for example "army vet". Weologisms given as "Twitter" and
	g lexis that's semantically differentiated, such as "Shared" and
	"liked" all link to the concept of technologicalisation
	and also information. The biggest change between the
	two texts is that technologicalization has occurred,
	evidenced by text D's online written prode. Not only is
	text) an accessing text due to his longues from
	text Dan accessible feest, due to this looper frequency, informul less, the sees from the Ust century are now
	very widely accessible, and to reason being able to
	Share atides on social per media Platform, and also
	mest online articles can be easily found and head for
	free Even though this article was from a US website,
	people from all over the word will be able to access this
.	text, as the internet is a global penenomenon. Thanks to
	improved education in America, and also literative and
	film being widespread(globally), the literacy rute is nuch
	higher now than in the 1800s
t I	ı

 	
	In text C, the discourse structure consists of 3 large pag
	paragraphs, which feature many long compex sentences.
	At the time in 1868, formenty was still valued and as
	this is a formal document its purpose is to inform the
	reader of their rights. The large paragraphs the with
	the long; complex sentences broken up with many commos
	mones he text less accessible to the public and allows the
	government to maintain their instrumental power over
	the citizens.
	In text D, however, the discourse structure features
	Shorter paragraphs and a variety of sentence types, with
	many simple sentenceys, title " we've hear you in so many
	Many Shipel Sentenceys, total " we've hut you in so many This is one to technological much, indicated by the text's arithe mode. Ways . The text also features he discourse flature
	of exophonic regenences, for example hie "Danota Access
	Of exophonic regenences, for example hie "Danota Access Pipeline " and also "religious regenence to "Ctod". The exophonic
	reference to bue " Vakota Access Dipoline" makes the text wave
	interesting to reader, especially as it's a topical issue in America
	and his text's purpose is to entertain. As his mode is
	online, tare discourse structure a allows the text to
	be even more accessible, as it maintains clarity. The
	discourse feature of exophoric reservences appeals to true
	Anierican neader, or buse interested in American culture.
	This could line to synthetic personalisation, as the text
	manipulates what the American neader understands about
	the world and American autre, in order to engage them.
,	Consequently, the reaser is then more likely to read
	more articles from this site as a rapport or

Examiner commentary

This is a good example of a solid Level 5 response. A range of methods are applied fairly methodically, using appropriate terminology (passives, pronouns, archaic lexis, neologisms, sentence types, discourse). This allows the answer to access the Level 5 category for AO1. Patterns of language, however, although alluded to in places, are not clearly established and therefore no credit is awarded for this. There is a clear understanding shown of the temporal contexts of both texts and their genres. Strong and helpful points are made about contextual factors in places, with some weighing up of how these might affect language use. For example, the semantic differentiation shown in the modern text is clearly and convincingly linked to its online genre and the informalization of language over time. This is securely linked to reception. The influential power wielded by the producer in Text C through the formality of the language is well understood and contrasted with the more informal discourse structure of the comparison text. This is also clearly linked to the intended audience. This is a strong answer, which displays an overall secure understanding and knowledge but lacks the insightful analysis and breadth of discussion of Exemplars 1 and 2. AO1: 9 marks; AO3: 10 marks; AO4: 10 marks.

language in the 21st century, and
language in the 21st century, and also the producer using direct
Quaration uneverthe contraction is
lis merent (thus emulating speech).
Additionally, a direct queration
Additionally, a direct quenation is also typical of a modern article.

Examiner commentary

This is a stronger answer than Q1 or Q2, applying a range of methods to the texts systematically and establishing some patterns, thus securely accessing the Level 5 category for AO1. Subordinate and relative clauses, complex syntax, modality, lexical fields, discourse structure and sentence patterns are identified and convincingly analysed, using well-chosen evidence. There are clear contextual links made, both in terms of reception and production, and the texts are compared consistently from the outset. In terms of showing how contextual factors may account for variations in language use, however, conclusions, while sound, lack the insightful weighing up seen in Exemplars 1-4. Similarly, while comparisons of language features are sound, the response fails to clearly establish some of the ways that language has varied over time. For that reason, it remains securely in the Level 4 category for AO4. AO1: 10 marks; AO3: 9 marks; AO4: 8 marks.

Exemplar 6 Level 5/4

25 marks

	·	
3		Next Cis a more modern text from the
		Treaty of For loranie. The test addresses the
		whole population of America and is a
		peace trans agreement on ensuring no harm
		to Name American Indians. Text D is
		an online or till from a digital modia reporting
		the war reperans nothing for forgiveness from
		Marke American Indians. The purpose is To
		inform the audience on the tradedies that
		occimed and the andience is quité general.
		the fext is contemporary.

	Both texts differ in terms of formality. Yext
	C is much more informal than text D. For
,	example, the text begins with a list of
	romes "l'enterent : aread Miliam names
	are hereto premises" the ones of formal
	titles "Lieutenent" and "General" already
	inplicates that this is very formal the can
	see that as a political document, the
	title are there to provide aredibility word
	Jee that as a polibical document, the title are there to provide aredibility word of the treaty. The little 'Article 1' implies
:	that this is a she political law that
	will take form of nalls and conditions.
	it indicates: that there are many more to
	go. * the use of lieutenent suggests that
	this is a new document ording where in the
	19th century, discrimination and colonialism
	was prevelent. Therefore, this document
	is subject to providing discriminating
	resset for ration americans
	In comparison, text D is reporting war
	vereni apologiosog so they would be lest
	informal. The text is mark model, therefore
	7 atilles the autable "his wo hut a or in
	so meny names the use of this evokes
	Thinking our on a line language liver or
	node text, this creates an inturnal register
	as they are vanget to an amabire way.
	rather than the text only way the nutter
	bondle "O clorissa jard" which is also informed
	as they are promating themselves on social
	media. As a text in 2016, eno is typical
	as it is a way of communicating information.
,	Society revolves crowned social media, Herepire,
	not though.
	NOT WOULD.

	1ext (was written in 1868, about 113 years
	after the Johnson's dictionary was invented
	in 1755. The irreabilities and aranmer
	in 1755. The propositions and grammer structure is supprosingly considered with median
	times as expected of a MORE modern text. This
	may attabase to the fact that this is a
	political document which reads to be accurate
	mor one orchiac feature wied is the model
	awatery werb of 'shall' Manadays; "shall'
,	is considered archiac as not many people use
	it, only the older generation. Therefore, it
	may be slowly be coming expirct. Instead
	the modal verb 'will' would replace it.
	'shall' is more assertive therefore, it is not
	used as much new but may be a reflection
	of the 1800s as it was quite a systemic
	so-cient with opression and lack of peedem
	of speech, Herefore to the model with
	whall' would be used more to answer
	orders or requests. Another archiar feature
	is advelogate joined to getter such as there
	with and here in there is only the absence
	of the final -e inflection on therefor
	On the other hand, text. Dana lave modern
	and contemporary text contains new technological
	peakies for exemple, reolegisms such as
	"Twitter" and there is used. This is a -
	new technological rem that has come with
	He invention of traffer a social media nebsite
	and has become a noun. The rest "liked"
	has also gained another meaning, which is
	to click the "like" button on a social
	media nebsite. This is hips con of a last
	modern text due to the polyances in technology.
	This has also contributed to the made who all
	This has also contributed to the indespread

read of the apology. Initialisms are also
med ruch as Dakota Acres Pipe Line (DAPL)
This is because with texting and the
internet it is easier to abbreviale terms
to allowful a faster communicated. Aitchison
orgued that this is why prescriptions think
language is a coumbling motte due to
the primitive nature of initialiams.
Text cis very eleral in companion to
Text D. For exemple, the pre-modified
 non phrase bad men and the vellos
'arrested' and punish coundre a semant
feed of crime. The loxis is matter of fact
and describes the process of the consequences
 of whost may happen the nun phrase
bad men may be used be cause there
as a political downers, they must remain
objective and just state what they are
the treaty also has instrumental priner
so they are able to punish people accordingly
tence the literal language. It also
Whiles proper nound such on "Indians", "Brown "Black" and "United States" ong
Brown "Black" and "United Startes" was

3		because as a political document they
		reed to vertion actual names of places
		and people so the raws or credible and
		creatly identy, pragmatically, the proper
		nouns identify the cieco culput (whites & and
		people with authority that along their
		power when they colonided and chall to
		ine their instrumental poince enlaring

	•	downent needs to creatly state who was at
		fault and who was on The receiving end of their
		imasion of justice.
1		

	<u> </u>
	Text Dis much more figurative, perhaps
	due to the audience no they are receivers
,	of the media, therefore, they are more unable
	and should feel emporthy even though
	they were not the receivers of the tragedy.
	The abstract nans opression; officities and
	'indignities' are used as perficulty emotive
	rexis and resignificant in the fact they
	promote injustice. In companison to text C.
	feelingsand emotions are fallen into consideration
	with this lexic and the imprication of Jufferry
	and injunities is much more stronger. As
	a orbite, this can generate support from
	online which could contribute to the
	support of indiscrimination, coursing a
	social chencyl.
	Grammatically, the two texts differ in terms
	of complexity. Text C was conditional
	clauses "If bad men" repeatedly.
	Interestingly, the two clauses are used
	as conditions for the consequences of
	breaking the treaty. However, MK regarding
	He time it took place, the Northe
	Indians owned their land yet the americans
	colonised it. Kherofortof Fre conditional clauses
	are application to both parties, applying the
	blane onto both. The monopour verb phrase
	'maintain it' implies that the indians
	are the gras who are responsible for
	ensing there is peace even though they
	ensuing there is peace even though they one the ones who are within to the vier
	whereas the whereas the war government of
	United stalks' or predged to keepit (verb
	what are in marrian of that that that one are in the that
	phase implying that they only issue the

Examiner commentary

This is a borderline Level 4/5 response, which unfortunately remained uncompleted (the largely redundant introduction would not have helped with time constraints here). Quite a lot of ground is covered for AO1, with some patterns established using well-chosen evidence and some convincing analysis. These include the repeated use of 'shall' as an auxiliary (not routinely commented on), the lexical field of crime and use of collective nouns in the older text, and the neologisms and emotive abstract nouns present in the modern text. This allows the answer to access the Level 5 category for AO1. Relevant links are made to context, although this is not consistent throughout the answer. In places, there is irrelevant digression which is not credited (historical commentary on the abuse of power by the Whites during colonization, for example). Candidates are advised to remain focussed on the question, as any labouring of contextual points (however interesting they may be) which are not clearly linked to language features is rarely credited. Although valid comparisons of linguistic features are made across the texts, there is insufficient focus on language change. AO3 and AO4 consequently remain securely in the Level 4 category. AO1: 9 marks; AO3: 8 marks; AO4: 8 marks.

Exemplar 7 Level 4

Examiner commentary

This is a good example of a borderline Level 3/4 answer. Although generally assertive in tone, there is an attempt to apply linguistic methods with limited success. For example, the marked terms in both texts are compared and linked to contextual factors in a way which is valid and relevant. The Latinate lexis of the older text is exemplified, however the links made to context are generalised. With more depth of analysis, higher marks could have been awarded for AO3. There is an attempt to compare sentence types which is only partially successful, again due to a lack of detail. Whilst there is a basic acknowledgement of the differences in genre, this is again simplistic with insufficient supporting commentary. The fact that Text C, for example, is a binding legal document with a very specific purpose is not explored, nor is its intended audience. With reference to change, there are again attempts to compare language which are valid. For example, the archaic lexis of Text C and the neologisms of the comparison text are securely linked to technological advancement. Overall, however, analysis lacks the focus and detail required of a higher band, with contextual conclusions which are mostly assertive and simplistic, as opposed to sound. AO1: 7 marks; AO3: 7 marks; AO4: 7 marks.

Examiner commentary

As with Question 2, the answer is almost wholly assertive in tone, with a lack of exemplification from the texts until the end. There is a whole paragraph on punctuation, often found in weaker answers, which, while of some syntactic relevance in the context of language change, is generally not credit-worthy. Candidates are advised to avoid lengthy commentaries on punctuation. Although there is some discussion on context, points remain generalised. In terms of AO4, there is a limited identification of concepts and only basic comparisons are made across the texts, with very little demonstration of how language use has varied over time. AO1: 4 marks; AO3: 4 marks; AO4: 3 marks.
