Monday 29 November 2021 – Morning

GCSE (9–1) Combined Science (Chemistry) A (Gateway Science)

J250/04 Paper 4 (Foundation Tier)

Time allowed: 1 hour 10 minutes

You must have:

- a ruler (cm/mm)
- the Data Sheet for GCSE (9–1) Combined Science (Chemistry) A (inside this document)

You can use:

- · a scientific or graphical calculator
- an HB pencil

Please write clearly in black ink. Do not write in the barcodes.							
Centre number				Candidate number			
First name(s)							
Last name							

INSTRUCTIONS

- Use black ink. You can use an HB pencil, but only for graphs and diagrams.
- Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.
- · Answer all the questions.
- Where appropriate, your answer should be supported with working. Marks might be given for using a correct method, even if your answer is wrong.

INFORMATION

- The total mark for this paper is 60.
- The marks for each question are shown in brackets [].
- Quality of extended response will be assessed in questions marked with an asterisk (*).
- This document has 24 pages.

ADVICE

· Read each question carefully before you start your answer.

SECTION A

Answer **all** the questions.

You should spend a maximum of 20 minutes on this section.

Write your answer to each question in the box provided.

A Ca	arbon monoxide		
3 Nit	trogen		
Ox	kygen		
) Su	ılfur dioxide		
our ar			
	ole shows information about four Description of element		
⁻he tab	Description of element at room temperature	Description of reactivity	
	Description of element at room temperature colourless gas	Description of reactivity reactive	
he tab	Description of element at room temperature	Description of reactivity	
A B	Description of element at room temperature colourless gas pale yellow gas	Description of reactivity reactive very reactive	

The diagram shows the main stages in a life-cycle assessment of a product.

	m	Raw naterials	\rightarrow	Manufacturing	\rightarrow	Distribution	\rightarrow	Use	\rightarrow	Stage X	
	Wh	at is the n	ame	of Stage X?							
	Α	Disposa	I								
	В	Extraction	n								
	С	Packagii	ng								
	D	Producti	on								
	You	ır answer								[′	1]
4	The	e Earth's e	early a	atmosphere contain	ed litt	tle or no oxygen.					
	Wh	ich proces	ss pro	oduced the oxygen	found	in the Earth's atmo	sphei	re today?			
	Α	Burning	fossil	fuels							
	В	Photosy	nthes	is by plants and alg	ae						
	С	Respirat	ion b	y bacteria							
	D	Volcanic	activ	rity							
	You	ır answer								[′	1]
5	Wh	ich staten	nent a	about the Group 0 e	leme	nts is correct?					
	Α	They exi	ist as	simple molecules.							
	В	They exi	ist as	single atoms.							
	С	They rea	act to	form giant covalent	mole	ecules.					
	D	They rea	act to	form ionic compour	nds.						
	You	ır answer								['	1]

6		ny scientists believe that increased levels of methane in the atmosphere are contributing bal warming.	g to
	Wh	at causes increased levels of methane in the atmosphere?	
	Α	Cutting down trees	
	В	Exhaust gases from car engines	
	С	Incomplete combustion of fossil fuels	
	D	Waste gases from cows and landfill sites	
	Υοι	ur answer	[1]
7	Oct	ane, C ₈ H ₁₈ , is a compound in petrol.	
	Wh	ich statement about octane is correct?	
	Α	It is a hydrocarbon with a relative molecular mass of 66.	
	В	It is a hydrocarbon with the empirical formula C ₄ H ₉ .	
	С	It is extracted from crude oil by filtration.	
	D	It is in the bitumen fraction of crude oil.	
	Υοι	ır answer	[1]
8	Soc	dium reacts with water to form sodium hydroxide and hydrogen.	
	Wh	at is the correctly balanced symbol equation for this reaction?	
	Α	$Na(s) + H_2O(I) \rightarrow NaOH(aq) + H_2(g)$	
	В	$Na(s) + 2H_2O(I) \rightarrow NaOH(aq) + 2H_2(g)$	
	С	$2Na(s) + H_2O(I) \rightarrow 2NaOH(aq) + H_2(g)$	
	D	$2Na(s) + 2H_2O(l) \rightarrow 2NaOH(aq) + H_2(g)$	
	Υοι	ur answer	[1]

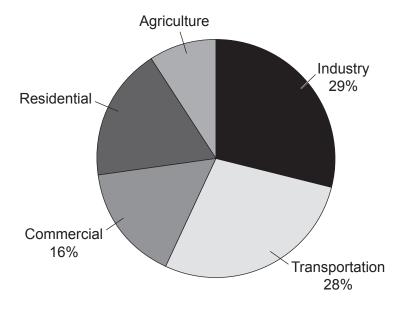

9 A copper ore contains 66.4% copper. The ore is CuS.

What is the maximum mass of copper that can be extracted from 500 tonnes of the ore?

- A 7.53 tonnes
- B 66.4 tonnes
- C 332 tonnes
- **D** 33 200 tonnes

Your answer [1]

10 The diagram shows the percentage of greenhouse gases made from different sources.

The percentage of greenhouse gases produced from Residential is **twice** that produced from Agriculture.

What is the percentage of greenhouse gases produced from Residential?

A 9%

B 18%

C 27%

D 36%

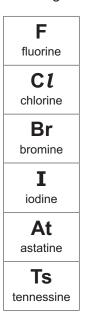

Your answer [1]

SECTION B

Answer all the questions.

11 In 2010, scientists discovered a new Group 7 element called tennessine. Its symbol is Ts.

The diagram shows where tennessine is placed in Group 7 of the Periodic Table.

Use your knowledge of the properties and trends of the Group 7 elements to **predict** the answer to the following questions.

(a) How many outer shell electrons are there in an atom of tennessine?

Put a (ring) around the correct answer.

1 7 17

[1]

(b) What is the reactivity of tennessine compared to astatine?

Put a (ring) around the correct answer.

less reactive more reactive the same

[1]

(c) What is the physical state of tennessine at room temperature?

Put a (ring) around the correct answer.

gas liquid solid

[1]

(d) What is the melting point of tennessine compared to astatine?

Put a (ring) around the correct answer.

higher lower the same

[1]

- 12 This question is about the Group 1 metals.
 - (a) A teacher adds a small piece of a Group 1 metal to a trough of water, as shown in Fig. 12.1.

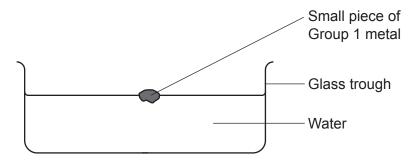

Fig. 12.1

The metal burns with a lilac flame, sparks and explodes.

Which Group 1 metal did the teacher add to the water in Fig. 12.1?

Put a (ring) around the correct answer.

lithium sodium potassium rubidium caesium [1]

(b) Sodium is a soft metal with a dull coating.

It is shiny when it is freshly cut.

After several seconds, the shiny surface goes dull.

(1)	Which gas in the air reacts with the sodium as it goes dull?	

.....[1]

(ii) What is the name of the chemical compound made as the sodium goes dull?

(iii) How long would it take a piece of freshly cut lithium to go dull compared to sodium?

Give a reason for your answer.

[2]

(c) Fig. 12.2 shows the trend in the density of the Group 1 metals from lithium to caesium.

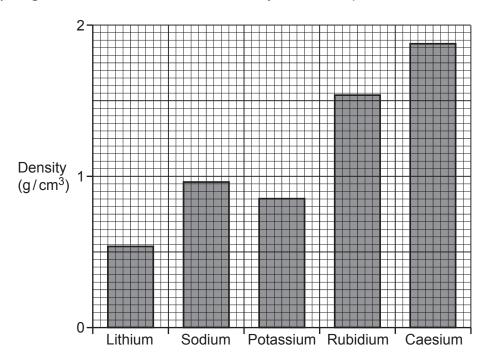

Fig. 12.2

Which Group 1 metal does not fit the general trend?
Give a reason for your answer using information from Fig. 12.2.

۰	Table 13	3.1 shows the stages in the separation of crude oil into fractions.				
	The stag	ges are not in the correct order.				
		Stages in the separation of crude oil into fractions				
	W	The vapours are piped into the bottom of the fractionating column. The vapours cool and the fractions condense at different temperatures.				
	Х					
	Υ	Crude oil is heated and vaporised.				
	Z	The vapours rise up the column.				

(c) Table 13.2 shows information about the different gases in the LPG (liquefied petroleum gas) fraction separated from crude oil.

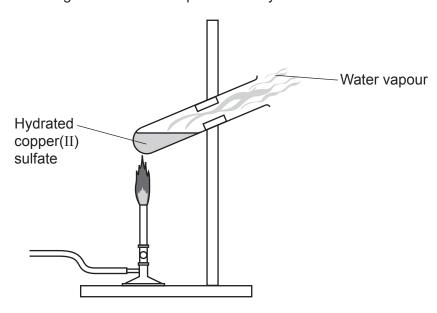

Gas in the LPG fraction	Formula	Boiling point (°C)
Methane	CH ₄	-162
Ethane	C ₂ H ₆	-89
Propane	C ₃ H ₈	-42
Butane	C ₄ H ₁₀	

Table 13.2

	(i)	Write the n	ame of the h	omologous ser	ies of the gase	es in the LPG fraction.	
							[1]
	(ii)	What is the	correct gen	eral formula for	this homolog	ous series?	
		Put a ring	around the	correct answer.			
		C_nH_n	C_nH_{2n}	C_nH_{2n+2}	$C_{2n}H_{2n}$	$C_{2n}H_{2n+2}$	[1]
	(iii)	Use the da	ta in Table 1	3.2 to estimate	the boiling po	oint of butane.	1-7
			E	Estimated boilin	g point =		°C [1]
(d)	The	equation sh	nows the rea	ction for metha	ne burning in	a limited amount of oxygen.	
	2CH	H ₄ (g) + 3O ₂	$g(g) \rightarrow 2CC$	$O(g) + 4H_2O(g)$			
	(i)	Write down	the name o	f the hazardous	gas formed in	n this reaction.	
							[1]
	(ii)	State why	the gas ident	ified in (d)(i) is	hazardous to	humans.	
							[1]

14 A student investigates heating hydrated copper(II) sulfate, CuSO₄.5H₂O.

The diagram shows the experiment they do.

The student:

- Measures the mass of a boiling tube.
- Puts about 5 g of hydrated copper(II) sulfate in the boiling tube and measures the mass.
- Gently heats the boiling tube for one minute.
- Lets the boiling tube cool down and measures the mass.

During the experiment the hydrated copper ($\rm II$) sulfate turns from blue to white and water vapour is produced.

Look at the student's results.

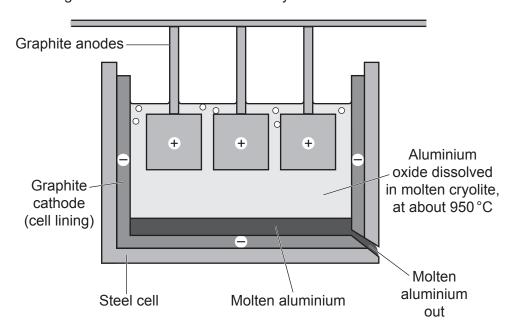

Mass of boiling tube (g)	69.1
Mass of boiling tube and copper(II) sulfate before heating (g)	74.2
Mass of boiling tube and copper(II) sulfate after heating (g)	73.4

(a) Calculate the mass of water produced in the experiment.

		Mass of water = g [1]
(b)	The	e student expected a greater mass of water to be produced.
	Hov	w could they improve the experiment so a greater mass of water vapour is produced?
		[1]
(c)	Loo	k at the equation for the reaction.
		$CuSO_4.5H_2O(s)$ \Longrightarrow
		blue solid white solid
	(i)	Complete and balance the symbol equation. [2]
	(ii)	The student adds a few drops of water to a boiling tube containing some of the white solid.
		Describe what the student observes happening to the white solid.
		Give a reason for your answer.
		Observation
		Reason
		[2]
	(iii)	As water reacts with the white solid, the temperature of the boiling tube increases.
		What name is given to this type of reaction where heat is transferred to the surroundings?

15 Aluminium is produced from aluminium oxide by electrolysis.

The diagram shows the industrial electrolysis of aluminium oxide.

(a) Look at the equation for the electrolysis of aluminium oxide.

$Al_2O_3 \rightarrow$	Al +	(O_2
-----------------------	------	---	-------

Complete the balanced symbol equation for the reaction.

[2]

- **(b)** Molten aluminium oxide contains Al^{3+} and O^{2-} ions.
 - (i) Explain why the aluminium oxide must be molten during electrolysis.

.....[2]

(ii) Explain why aluminium is produced at the cathode.

.....[1]

(c) Aluminium melts at 650 °C

Describe two reasons why it is cheaper to recycle aluminium than to produce it from electrolysis.
Reason 1
Reason 2
[2]

16* Fig. 16.1 shows how the atmospheric carbon dioxide concentration changed between 1970 and 2010.

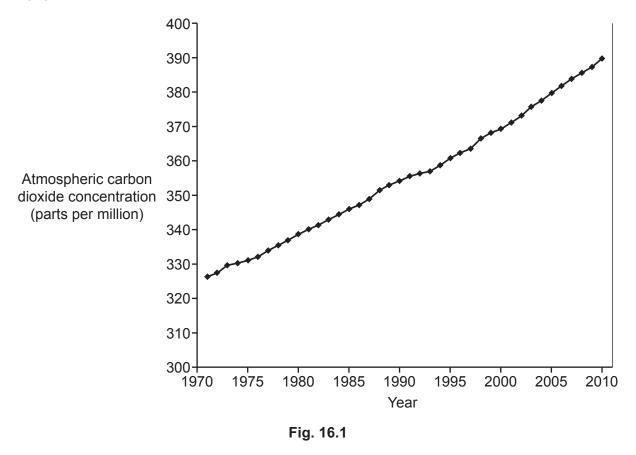

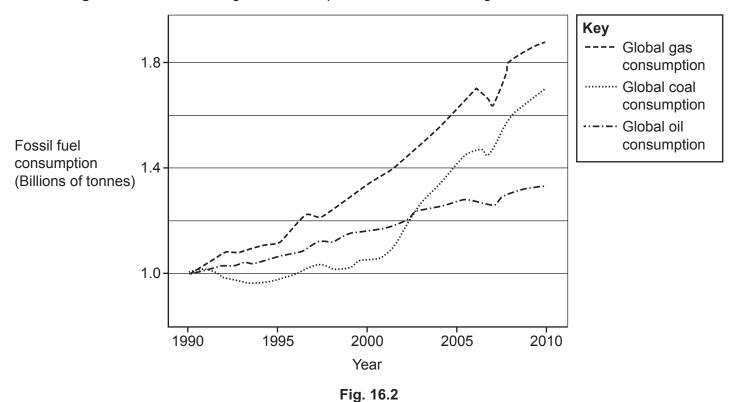

Fig. 16.2 shows how the global consumption of fossil fuels changed between 1990 and 2010.

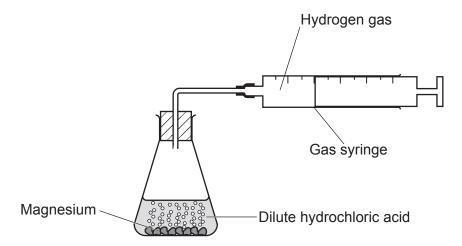

A student thinks that the increase in atmospheric carbon dioxide is because of the increased consumption of fossil fuels.

Describe and explain if the graphs in Fig. 16.1 and Fig. 16.2 support this statement.			
Use information from Fig. 16.1 and Fig. 16.2 in your answer.			
[6]			

17 A student investigates the rate of reaction between magnesium and an **excess** of dilute hydrochloric acid.

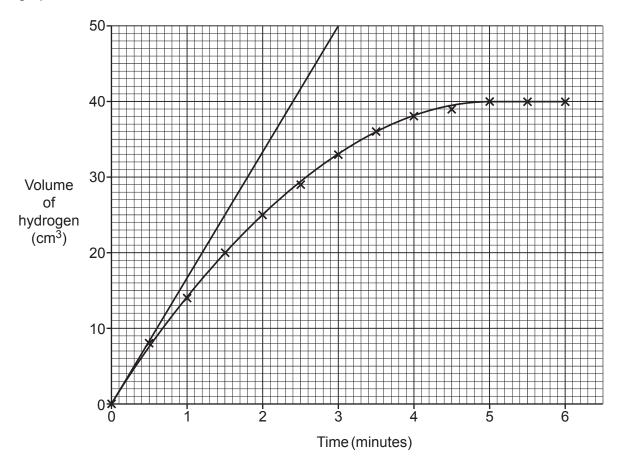

The diagram shows the equipment they use.

The student measures the total volume of hydrogen gas produced every 30 seconds.

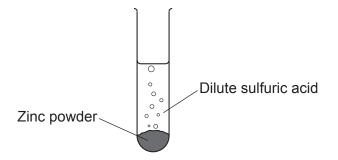

The student plots a graph of their results.

They want to calculate the rate of reaction at the start of the reaction. They draw a tangent on the graph at the start of the reaction.

Rate of reaction =
(b) What happens to the rate of reaction as the reaction progresses? Explain your answer using ideas about particles and collisions. [3] (c) Another student repeats the experiment. They increase the concentration of the dilute hydrochloric acid. They keep everything else in
Explain your answer using ideas about particles and collisions. [3] (c) Another student repeats the experiment. They increase the concentration of the dilute hydrochloric acid. They keep everything else in
(c) Another student repeats the experiment. They increase the concentration of the dilute hydrochloric acid. They keep everything else in
(c) Another student repeats the experiment. They increase the concentration of the dilute hydrochloric acid. They keep everything else in
(c) Another student repeats the experiment. They increase the concentration of the dilute hydrochloric acid. They keep everything else in
(c) Another student repeats the experiment. They increase the concentration of the dilute hydrochloric acid. They keep everything else in
(c) Another student repeats the experiment. They increase the concentration of the dilute hydrochloric acid. They keep everything else in
They increase the concentration of the dilute hydrochloric acid. They keep everything else in
the experiment the same.
(i) Does the gradient of the graph at the start of this student's reaction decrease, increase or stay the same compared to the first student's experiment?
Tick (✓) one box.
Decrease
Increase
Stay the same
Give a reason for your answer.
[1
(ii) Write down the volume of hydrogen gas that is produced at the end of this reaction.
Volume = cm ³ [1

18 A student investigates the reaction between zinc and dilute sulfuric acid.

State if the metals, **R**, **S** and **T** are catalysts or not.

The student observes that bubbles are produced slowly during the reaction.

They want to find a catalyst for the reaction. They repeat the experiment, but each time they add a small piece of a different metal, **R**, **S** and **T**.

Look at the student's results.

Metal	Appearance of metal at start of reaction	Observations
В	silvery-white	fast bubbling
R		the silvery-white metal disappears
	reddish-brown	fast bubbling
S		the metal remains reddish-brown
_	dark grey	slow bubbling
Γ		the metal remains dark grey

Explain your answers using the information in the table and your knowledge of catalysts.

21

ADDITIONAL ANSWER SPACE

If additional space is required, you should use the following lined page(s). The question number(s) must be clearly shown in the margin(s).
