Descriptions of fields (mostly copied from the CIA World Factbook)	
Field	Description
Country	Country name
Region	The region field is derived from UN Country classifications with some simplification and some use of CIA World Factbook Map fields. Countries which are not in Northern Africa have all been labelled Southern Africa.
Population	This entry gives an estimate from the US Bureau of the Census based on statistics from population censuses, vital statistics registration systems, or sample surveys pertaining to the recent past and on assumptions about future trends.
Urban population (% of total)	This entry gives the percentage of the total population living in urban areas, as defined by the country.
Total area (km²)	Total area is the sum of all land and water areas delimited by international boundaries and/or coastlines.
Forest (% of total area)	Forest area is land spanning more than 0.5 hectare with trees higher than five metres and a canopy cover of more than 10% to include windbreaks, shelterbelts, and corridors of trees greater than 0.5 hectare and at least 20m wide.
Electricity consumption (million kWH per year)	Consumption is defined as a country's total electricity generated annually plus any imports and minus exports.
CO₂ emissions (metric tons)	Emissions is defined as a country's amount of carbon dioxide released by burning coal, petroleum, and natural gas. Data are reported in metric tonnes of CO ₂ .
Median age	The estimated median age for the whole population.
Annual population growth rate (%)	The average annual percent growth in the population. Negative values mean that the population is shrinking.
Total road length (km)	This entry gives the <i>total</i> length of the road network and includes the length of the <i>paved</i> and <i>unpaved</i> portions.
Life expectancy	This entry contains the average number of years to be lived by a group of people born in the same year, if mortality at each age remains constant in the future.
Birth rate per 1000	This entry gives the average annual number of births during a year per 1000 persons in the population at midyear; also known as crude birth rate.
GDP per capita PPP (\$)	GDP is the gross domestic product or value of all final goods and services produced within a nation in a given year. A nation's GDP at purchasing power parity (PPP) exchange rates is the sum value of all goods and services produced in the country valued at prices prevailing in the United States in the year noted. This entry shows real GDP, divided by population as of 1 July for the same year.

Changes from last data setData updated to latest values and three fields added: Urban population, Forest and CO₂ emissions.

Two fields removed: Birth rate rank and GDP per capita rank.

Western Sahara deleted from country list as this is a disputed territory.

Country names updated: Swaziland to Eswatini, Macedonia to North Macedonia.

American region names abbreviated: e.g. America, South to America, S.
