

OXFORD CAMBRIDGE AND RSA EXAMINATIONS

Tuesday 13 May 2025 – Afternoon

GCSE (9–1) Biology A (Gateway Science)

J247/01 (Foundation Tier)

**Time allowed: 1 hour 45 minutes
plus your additional time allowance**

YOU MUST HAVE:

a ruler (cm/mm)

YOU CAN USE:

a scientific or graphical calculator

an HB pencil

Please write clearly in black ink.

Centre number

--	--	--	--	--

Candidate number

--	--	--	--

First name(s)

Last name

READ INSTRUCTIONS OVERLEAF

INSTRUCTIONS

Use black ink. You can use an HB pencil, but only for graphs and diagrams.

Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.

Answer ALL the questions.

Where appropriate, your answer should be supported with working. Marks might be given for using a correct method, even if your answer is wrong.

INFORMATION

The total mark for this paper is 90.

The marks for each question are shown in brackets [].

Quality of extended response will be assessed in questions marked with an asterisk (*).

ADVICE

Read each question carefully before you start your answer.

BLANK PAGE

SECTION A

You should spend a MAXIMUM of 30 MINUTES plus your additional time allowance on this section.

Write your answer to each question in the box provided.

1 Which of these is a plant hormone? [1]

A Auxin

B FSH

C Insulin

D Testosterone

Your answer

2 Which system in the human body releases hormones from glands? [1]

A Circulatory system

B Endocrine system

C Nervous system

D Respiratory system

Your answer

3 Which molecule supplies cells with their energy requirements? [1]

A Amino acid

B ATP

C Auxin

D DNA

Your answer

4 Which piece of equipment is used to measure the rate of water uptake from a leafy shoot? [1]

A Microscope

B Potometer

C Thermometer

D Water bath

Your answer

- 5 A student tests a sample of milk to see if it contains sugar.**

Which reagent would the student use and what colour would be observed for a POSITIVE result? [1]

	Reagent	Colour observed for a positive result
A	Benedict's solution	purple
B	Benedict's solution	red
C	Biuret solution	purple
D	Biuret solution	red

Your answer

- 6 Which two substances are products of ANAEROBIC respiration in plants? [1]**

- A Ethanol and carbon dioxide**
- B Glucose and carbon dioxide**
- C Lactic acid and carbon dioxide**
- D Water and carbon dioxide**

Your answer

- 7 The diagram shows a plant shoot and a source of light.**

Which effect will this light source have on the plant shoot? [1]

- A The plant shoot will continue to grow upwards.**
- B The plant shoot will grow away from the light.**
- C The plant shoot will grow towards the light.**
- D The plant shoot will stop growing.**

Your answer

☐

8 The diagram shows the human circulatory system.

What describes the route the blood will take when it leaves the lungs and passes to the rest of the body?

[1]

- A Pulmonary artery → left atrium → left ventricle
→ aorta (artery)**
- B Pulmonary artery → right atrium → right
ventricle → vena cava (vein)**
- C Pulmonary vein → left atrium → left ventricle
→ aorta (artery)**
- D Pulmonary vein → right atrium → right ventricle
→ vena cava (vein)**

Your answer

9 The enzyme protease is added to a sample of protein.

What will INCREASE in concentration? [1]

A Amino acids

B Fatty acids

C Glucose

D Glycerol

Your answer

☐

10 What describes the pathway of a REFLEX ARC? [1]

A Effector → motor neurone → relay neurone → sensory neurone → receptor

B Effector → sensory neurone → relay neurone → motor neurone → receptor

C Receptor → motor neurone → relay neurone → sensory neurone → effector

D Receptor → sensory neurone → relay neurone → motor neurone → effector

Your answer

☐

11 Which cell does NOT contain a nucleus? [1]

- A Red blood cell**
- B Root hair cell**
- C Sperm cell**
- D White blood cell**

Your answer

12 Which part of the brain controls heart rate? [1]

- A Cerebellum**
- B Cerebrum**
- C Medulla**
- D Pituitary**

Your answer

13 The diagram shows a dog's excretory system.

Which labelled part is a KIDNEY? [1]

Your answer

14 Which mechanism is used to control WATER BALANCE in the human body? [1]

- A Adjusting the glucose concentration of the urine**
- B Altering the volume of urine produced**
- C Changing the rate of urea production**
- D Varying the rate of sweat production**

Your answer

15 The diagram shows a kidney tubule.

What is the structure labelled X? [1]

A Bowman's capsule

B Collecting duct

C Glomerulus

D Loop of Henle

Your answer

BLANK PAGE

SECTION B

16 The diagram shows DNA.

(a) Complete the table to show which letter represents each part of DNA. [2]

Part of the DNA	Letter
Base	
Phosphate	
Sugar	

(b) Which words can be used to describe DNA?

Tick (✓) THREE boxes. [3]

Double helix

☐

Molecule

☐

Monomer

☐

Polymer

☐

Protein

☐

Single helix

☐

(c) A sample of DNA is analysed.

15% of the bases in the sample are Adenine (A).

Calculate the percentage of the bases that are Guanine (G).

Percentage = _____ % [3]

17 A student is observing onion cells using a light microscope.

- (a) The student used an objective lens with a magnifying power of $\times 40$ to view the onion cell.
The eyepiece had a magnifying power of $\times 10$.**

Calculate the total magnification they used to view the onion cell.

**Total magnification used
to view the onion cell = _____ [2]**

(b) The student produces a labelled scientific drawing of one onion cell.

Describe THREE ways the student could improve their scientific drawing.

1 _____

2 _____

3 _____

[3]

- (c) Animal and bacterial cells have some cell structures that are the same and some that are different.

Identify which structures are present in each type of cell.

Tick (✓) ONE box in each row.

One has been done for you. [3]

Cell structure	In animal cells only	In bacterial cells only	In both animal and bacterial cells
Ribosome			✓
Nucleus			
Plasmid			
Mitochondria			

- (d) Which cell structure shown in the table is the site of protein synthesis in cells?

_____ [1]

(e) Substances can move into and out of cells.

Give TWO processes that can move substances into or out of cells.

1 _____

2 _____

[2]

18 Amylase is an enzyme that is produced by the salivary glands and is released into the mouth in saliva.

In the mouth, amylase begins the breakdown of starch.

(a) What monomers are large carbohydrates such as starch made from?

_____ **[1]**

(b) Explain why the enzyme amylase cannot break down the substrate protein.

Include ideas about the active site.

_____ **[3]**

(c) Amylase is an enzyme that works best in alkaline conditions.

State what will happen to the structure of the enzyme when it enters the acidic conditions of the stomach.

_____ **[1]**

(d) Bacteria also use the enzyme amylase.

The graph shows the results of an experiment to investigate the effect of temperature on the relative activity of this enzyme.

(i) Describe how temperature affects the relative activity of this enzyme.

[2]

- (ii) Describe how this experiment could be improved to determine a more accurate optimum temperature for this enzyme.

[1]

19 Hormones are important for human reproduction.

(a) Four human hormones are given below.

FSH oestrogen progesterone testosterone

Identify which hormone fits each of these descriptions.

(i) A hormone that maintains the lining of the uterus.

_____ **[1]**

(ii) A hormone that causes the lining of the uterus to thicken.

_____ **[1]**

- (b) Female sheep (ewes) have a reproductive cycle which is also controlled by hormones. During their reproductive cycle, ewes will ovulate. However, in some places ewes do not ovulate throughout the year.

The table shows some information about when ewes ovulate in two different places, Idaho and Texas.

Month	Ewes ovulating (%)	
	Idaho	Texas
January	100	100
February	100	94
March	94	52
April	32	32
May	2	31
June	7	75
July	6	94
August	41	100
September	100	94
October	94	100
November	100	91
December	100	100

A farmer will introduce a male sheep into a flock of ewes when the ewes are most likely to be ovulating.

- (i) Which **THREE** months are **LEAST** likely to result in pregnancy for the sheep in Idaho?

_____ [1]

- (ii) Which **TWO** months would be **MOST** likely to result in pregnancy for sheep in both Idaho **AND** Texas?

_____ [1]

- (iii) Texas is closer to the equator than Idaho.
Sheep that live closer to the equator tend to ovulate all year round.

Explain how the data supports this statement.

_____ [2]

- (iv) Pregnancy in sheep lasts 5 months.

Suggest why sheep in colder climates do **NOT** ovulate in the summer months.

_____ [1]

20 FIG. 20.1 shows a jackrabbit.

Jackrabbits are adapted to live in the desert where it can be cold at night and very hot during the day.

FIG. 20.1

(a)* Explain how the jackrabbit's body regulates its body temperature during the day.

In your answer include:

**the role of the jackrabbit's skin in keeping cool
how its ears are adapted to increase heat loss.**

[6]

(b) Explain why it is important for the jackrabbit to maintain a constant temperature.

[2]

21 The diagram shows a lichen growing on a tree branch.

**A lichen is not a single organism but consists of algae and a fungus living together.
Each organism gains something from the other.**

The algae in the lichen have chlorophyll. The fungus obtains sugars from the algae.

(a) Explain how the algae produce sugars for the fungus.

[3]

(b) Explain how the production of sugars in the algae allows the algae to take up water.

[2]

22 There are three main types of blood vessel in the circulatory system.

(a) Complete this table by:

**writing the missing types of blood vessel
putting a tick (✓) or a cross (X) to identify the two
missing characteristics. [3]**

Characteristic	Type of blood vessel		
		Vein	
Valves along their length	X	✓	
Wall one cell thick	X		✓

- (b) Valves in the aorta sometimes need replacing.
There are two procedures that doctors can use to
replace these valves.
They are called TAVR and SAVR.

FIG. 22.1 shows the numbers of each of these two
procedures that took place in Finland between 2013
and 2016.

FIG. 22.1

- Give your answer to 1 decimal place.**

_____ % [4]

- damage or have strokes.**

procedure.

	Percentage of patients developing	
	Kidney damage	Strokes
After TAVR	0.5	2.5
After SAVR	2.5	4.0

shown in FIG. 22.1.

[3]

23 The diagram shows the human eye.

(a) State which letter in the diagram performs each of the following functions:

Controls the size of the pupil

Focuses the light on the retina

Transmits electrical impulses to the brain

Detects light

_____ **[3]**

- (b) Short-sightedness is a condition that causes the light entering the eye to be focused before it reaches the retina.

Opticians measure the focusing power of the eye in dioptries (D).

It is written as a minus number and indicates how short-sighted you are.

	Focusing power in dioptries (D)
Low short-sightedness	less negative than -3.0
Mild short-sightedness	-3.0 to -4.0
Moderate short-sightedness	-4.1 to -6.0
High short-sightedness	more negative than -6.0

- (i) A student has an eye test.
The optician tells the student that the focusing power of their eyes is -3.5 dioptries.

Explain to the student what this result means and how it is likely to be treated.

[2]

- (ii) Once short-sightedness has developed, it usually gets worse.

Another student has a focusing power of -1.0 D which is changing by -0.5 D per year.

Using a drug called atropine will reduce the change to -0.2 D per year.

Calculate how many MORE years it will take for them to develop MILD SHORT-SIGHTEDNESS if they use the drug compared to not using the drug.

Number of years more = _____ [2]

BLANK PAGE

24 A student is investigating mitosis in garlic roots.

The student grows some garlic for 10 days as shown in FIG. 24.1 and removes a root.

The student takes a sample of tissue from four parts of the root, A, B, C and D, as shown in FIG. 24.2.

FIG. 24.1

FIG. 24.2

- (a) The student prepares a slide to look for mitosis in the different parts of the root.
The student adds a stain when preparing the slide.**

Explain why the student adds a stain to look for mitosis.

[1]

- (b) The student uses a light microscope to look at the garlic root cells on the prepared slide.**

Describe how the student would set up the microscope so that the details of the garlic root cells are clearly visible.

[4]

- (c) The student takes two measurements when observing the cells under the microscope:

the total number of cells in the field of view
the number of cells in the field of view that are undergoing mitosis.

The results are in the table.

Part of the root	Total number of cells in field of view	Number of cells undergoing mitosis in field of view	Percentage of cells undergoing mitosis in field of view (%)
A	120		75
B	125	55	44
C	88	0	0
D	78	0	0

Calculate the number of cells undergoing mitosis in the field of view in part A.

Number of cells = _____ [2]

- (d) The student concludes that only cells found in certain parts of the root can divide by mitosis.

How does the data in the table support their conclusion?

[1]

(e) The student wants to improve their experiment to:

make a more accurate conclusion about where cells in the root can divide by mitosis
check that their results are reproducible.

Draw TWO lines to connect each IMPROVEMENT with HOW IT CAN BE ACHIEVED. [2]

IMPROVEMENT

HOW IT CAN BE ACHIEVED

Make a more accurate conclusion.

Compare the results with other students' results.

Check that the results are reproducible.

Use a lower magnification so that more cells can be counted.

Sample from more points in regions A and B.

- (f) Cells located in region D differentiate to form a tissue responsible for translocation.

State the name of this tissue.

_____ [1]

END OF QUESTION PAPER

EXTRA ANSWER SPACE

If you need extra space use these lined pages. You must write the question numbers clearly in the margin.
