Please note:

This OCR set assignment is to be used to provide evidence for the unit identified above. Alternatively, centres may ‘tailor’ or modify the assignment within permitted parameters (see Information for Teachers). It is the centre’s responsibility to ensure that any modifications made to this assignment allow learners to show that they can meet all of the learning outcomes and provide sufficient opportunity for learners to demonstrate achievement across the full range of marks.

INSTRUCTIONS TO TEACHERS

The OCR administrative codes associated with this unit are:

• Unit entry code R023
• Certification code Certificate J811/Diploma J821

The qualification numbers associated with this unit are:

• Unit reference number M/503/6236
• Qualification numbers J811 - 600/4780/X, J821 - 600/4771/9

Duration: Approximately 10 hours

ALL OF THIS MATERIAL MAY BE PHOTOCOPIED. Any photocopying will be done under the terms of the Copyright Designs and Patents Act 1988 solely for the purposes of assessment.

Version 2 April 2019 - Change of title to set assignment, no other changes.

Scenario for the assignment

Setting the scene - producing a display and information materials for a local health centre event

Staff at the local health centre are concerned about many of their patients who seem to lack basic knowledge about the way their body systems function and the disorders affecting them. The health centre staff want the patients to be aware of how the body systems enable them to survive and how they can affect their own and their families' health. Additionally the health centre staff intend to provide people with the knowledge and information they need to interpret their own body rate measures.

In partnership with the local health centre, your school/college has been invited to be involved in a ‘Health Event’ for the community. As a student of health and social care, you have been asked to produce materials for displays and a stand for the event. The focus of your displays and the stand will be ‘Understanding Body Systems’ and ‘Measuring Body Rates’.

Read through all of the tasks carefully, so that you know what you will need to do to complete this assignment.
Your tasks

Task 1: The structure and function of the cardiovascular system and some of its disorders

This task covers part of Learning Outcome 1: Know how body systems work and part of Learning Outcome 2: Understand disorders that affect the body systems

Your display and stand should include information about the cardiovascular system

You must:
- provide information about the structure and function of the cardiovascular system
- describe the symptoms of one disorder of the cardiovascular system
- explain how the disorder is diagnosed

Task 2: This task covers part of Learning Outcome 1: Know how body systems work and part of Learning Outcome 2: Understand disorders that affect the body systems

Your display and stand should include information about the respiratory system

You must:
- provide information about the structure and function of the respiratory system
- describe the symptoms of one disorder of the respiratory system
- explain how the disorder is diagnosed
Task 3: This task covers part of Learning Outcome 1: Know how body systems work and part of Learning Outcome 2: Understand disorders that affect the body systems

Your display and stand should include information about the respiratory system

You must:
- provide information about the structure and function of the digestive system
- describe the symptoms of one disorder of the digestive system
- explain how the disorder is diagnosed

Task 4: Measuring body rates and interpreting the results

This task covers all of Learning Outcome 3: Be able to interpret data obtained from measuring body rates with reference to the functioning of healthy body systems

You have been asked to give a practical demonstration for part of the health event to inform people about how body rates are measured and how to interpret the results.

You must:
- measure an individual’s pulse rate before and after activity and compare the results against normal/maximum pulse rates for age
- measure an individual’s peak flow before and after activity and compare the results against normal values for age, weight and height
- calculate an individual’s Body Mass Index and compare the results against healthy weights for height
- interpret the data obtained from your measurements and comparisons.
Information for Teachers

OCR Level 1/2 Cambridge National Certificate in Health and Social Care

OCR Level 1/2 Cambridge National Diploma in Health and Social Care

Unit R023: Understanding body systems and disorders
General guidance on using this assignment

1 General guidance

1.1 OCR assignments are available to download free of charge from our website: www.ocr.org.uk

1.2 OCR assignments are intended to be used for summative assessment of learners. The OCR specification for this qualification gives more information on the arrangements for assessing internally assessed units.

1.3 This assignment has been designed to meet the full assessment requirements of the unit. Learners will need to take part in a planned learning programme that covers the underpinning knowledge, understanding and skills of the unit.

2 Before carrying out this assignment

2.1 Learners should be provided with a copy of the Information for Learners section of this assignment.

2.2 Learners will not need to carry out any preparations prior to undertaking the assessment tasks, such as collating resources to use in the assessment.

2.3 We have estimated that it will take approximately ten hours to complete all tasks. Learners would need approximately 3 – 3.5 hours to complete task 1, 3 - 3.5 hours to complete task 2 and 3 – 3.5 hours to complete task 3. These timings are for guidance only but should be used by the teacher to give learners an indication of how long to spend on each task. Centres can decide how the time can be allocated between each part of the task. Centres are also permitted to spread the tasks across several sessions and therefore it is permissible for evidence to be produced over several sessions.

3 When completing the assignment and producing evidence

3.1 Each learner must produce individual and authentic evidence for each task within the assignment.

3.2 Centre staff may give support and guidance to learners. This support and guidance should focus on checking that learners understand what is expected of them and giving general feedback that enables the learner to take the initiative in making improvements, rather than detailing what amendments should be made. It is not acceptable for teachers/deliverers to provide answers or to work through answers in detail.

3.3 Learners may use information from any relevant source to help them with producing evidence for the tasks.
3.4 Learners must be guided on the use of information from other sources to ensure that confidentiality is maintained at all times. It is acknowledged that learners in their responses may refer to situations in the scenario we have provided but as the scenario is fictitious this does not break any rules of confidentiality.

3.5 We have specified what evidence the learner is expected to produce. Usually, the type of evidence provided may be modified, with the exception of certain types of evidence listed below under ‘Permitted changes’. Format must not be confused with the content or the type of evidence to be produced and it is important to note that it is possible to generate the evidence in a variety of formats. Centres must advise learners as to the most appropriate format of evidence. The assessment is structured so that learners are required to provide evidence of using appropriate Health and Social Care techniques to meet specified purposes. It is unlikely that evidence of the techniques used will, on their own, provide sufficient evidence to judge the extent to which they have been used appropriately. Annotations may help to provide this additional context. The section Evidence Summary at the back of this document will guide you on the type of evidence and formats for evidence.

4 Presentation of work for marking and moderation

4.1 Centres wishing to produce digital evidence in the form of an e-portfolio should refer to the appendix in the specification on guidance for the production of electronic assessment.

4.2 Centres may wish to discourage learners from excessive use of plastic wallets for presentation of their evidence as this may hinder the assessment process. Instead centres may wish to encourage learners to present their work so that it is easily accessible, e.g. spiral bound, stapled booklet, treasury tag.

5 Scope of permitted set assignment modification

The set assignment is very self-contained in its present form. The set of tasks form a coherent whole addressing all the learning outcomes and allowing access to the full range of marks.

You must not change the following:

- the learning outcomes
- the marking criteria
- the requirements for supervision and authentication as described in the specification (section The internally assessed units)
- the requirement to cover three body systems – cardiovascular, respiratory and digestive
- the requirement to carry out the measures of three body rates – pulse, peak flow and BMI.
Permitted changes:

The set assignment can be modified in terms of the areas described below at the permission of OCR but centres must be sure that learners still have the opportunity to cover all of the learning outcomes and to access the full range of marks:

- The learner’s assignment may be contextualised or amended to suit local needs. For example, instead of learners producing a poster and an information booklet, they could provide a set of presentation slides for a G.P. surgery.

- Who the individual is and what their needs are.

- Each specific task may be appropriately contextualised to match with any permitted changes you have made to the scenario.

- The type of evidence required and the format it takes.

OCR has ensured that in the language used and the tasks and scenario provided we have avoided discrimination, bias and stereotyping and support equality and diversity. In the development of qualifications and assessments we use the guidance given in the Ofqual publication *Fair access by design*, notably this includes:

- using language and layout in assessment materials that does not present barriers to learners
- using stimulus and source materials in assessment materials (where appropriate) that do not present barriers to learners.

If centres wish to adapt the set assignment we strongly advise that staff responsible for modifying the set assignment and quality assuring it refer to the publication *Fair access by design*.

If modifications are made to the set assignment, whether to just the scenario or to both the scenario and individual tasks, it is up to the centre to ensure that all learning outcomes can be met and that learners can access the full range of marks.
Specific guidance on the tasks

Introduction to the tasks

These guidance notes should be used in conjunction with the specification.

The tasks have been designed to enable learners to demonstrate their knowledge and understanding of how body systems work and disorders that affect body systems. Learners will interpret data obtained from measuring body rates with reference to the functioning of healthy body systems.

If learners produce evidence in the context of children, the children must be between 4-10 years.

Specific guidance on Task 4: Measuring body rates and interpreting the results

This task covers Learning Outcome 3: Be able to interpret data obtained from measuring body rates with reference to the functioning of body systems.

Learners need to select an individual or individuals on whom they will carry out the measurements. All three body rate measures may be carried out on the same individual however two or three different individuals may be used. Confidentiality and sensitivity are important considerations for this task. It is necessary to make sure that both the chosen individual(s) and the learners are briefed about the nature of the health and well-being assessment process that they will be taking part in.

Learners should have the opportunity to practice taking the body rate measures to ensure accuracy. Some learners may be reluctant to use their own measures and so it is acceptable to use another willing individual e.g. friend or visiting health care professional.

Learners need to take the three body rate measures themselves and keep accurate records of the results as part of the assessment evidence for LO3. The results must then be accurately interpreted compared to standard measures. For the practical aspect of this LO a witness statement is required to indicate the level of competence and confidence demonstrated by the learner when taking the measurement themselves. If the measurements are taken outside the classroom e.g. on work experience, the witness statement must be completed by an appropriately competent individual.

Guidance on witness statements is provided in Appendix A of the specification and a template witness statements is provided on the OCR website.

A witness statement is provided at the end of this MA and it is recommended that this is used to record both the witness observations and the marking decisions made by the assessor (the witness and the assessor may be different people).
Evidence summary

When completing this assignment it may be possible to generate evidence for completing a task in a variety of formats. This list provides examples of the format that can be used, it is not exhaustive. In some cases the task or assignment will require a specific format for the outcome and this will be clearly marked with an asterisk in the table.
