

<b>Unit Title:</b>	<b>Systems architecture</b>
OCR unit number:	20
Unit reference number:	T/601/3504
Level:	3
Credit value:	10
Guided learning hours:	80

## Unit aim

---

The aim of this unit is that learners will:

- Understand the representation of information within a computer and the way it is processed
- Make effective use of the operating environment of current computer systems
- Know the communication process in distributed operating systems and computer networks
- Know distributed applications and transaction processing in mainframe systems

Learning Outcomes	Assessment Criteria	Knowledge, understanding and skills
<p><b>1 The Learner will:</b> Understand the representation of information within a computer and the way it is processed</p>	<p><b>The Learner can:</b></p> <p>1.1 Describe how number systems and data representation are used to store information in a computer</p> <p>1.2 Describe the role of input, output and storage devices</p> <p>1.3 Describe the characteristics of C.P.U. components and the operation of the Fetch Execute Cycle</p> <p>1.4 Describe the operation of a peripheral device using correct technical terminology</p>	<ul style="list-style-type: none"> <li>• the number systems and data representation used for the storage of information e.g. ASCII EBCDIC Unicode, Binary Numbered System and Binary Decimal Code</li> <li>• the role of input, output and storage devices</li> <li>• the characteristics of C.P.U. components</li> <li>• the operation of the Fetch Execute Cycle and a peripheral device</li> </ul>

Learning Outcomes	Assessment Criteria	Knowledge, understanding and skills
2 Make effective use of the operating environment of current computer systems	2.1 Use and configure operating system interfaces and functions 2.2 Explain the role of process management and concurrent processes in computer operating system 2.3 Describe how operating system features can contribute to data and system security	<ul style="list-style-type: none"> <li>• how to use and configure the interfaces and functions of a range of operating systems</li> <li>• the role of process management and concurrent processes</li> <li>• how data and system security can be supported by features within an operating system</li> </ul>
3 Know the communication process in distributed operating systems and computer networks	3.1 Outline the function and operation of distributed operating systems 3.2 Outline the functions of data communications systems in enabling network and distributed systems	<ul style="list-style-type: none"> <li>• distributed operating systems</li> <li>• data communication systems and how they support network and distributed systems</li> </ul>
4 Know distributed applications and transaction processing in mainframe systems	4.1 Outline the operation and functions of mainframe systems 4.2 Outline the evolution of and characteristics of distributed applications 4.3 Outline data and process distribution	<ul style="list-style-type: none"> <li>• mainframe systems</li> <li>• the evolution and characteristics of distributed applications</li> <li>• data and process distribution</li> </ul>

## Assessment

The qualification has been designed to develop knowledge, understanding and skills in the full range of functions involved in the planning and control, hardware, software and systems installation, software solutions and the production of customer support materials. It also provides opportunities for learners to study towards system and network management, to specialise in one or more specific programming languages in addition to being able to take units that are vendor specific.

Each unit within the specification is designed around the principle that candidates will build a portfolio of evidence relating to progression towards meeting the unit assessment criteria.

The unit assessment criteria reflect the demands of the learning outcomes for each unit.

In order for candidates to be able to effectively progress towards meeting the requirements of each assessment criteria, tutors must make sure that the supporting knowledge, understanding and skills requirements for each criteria are fully addressed. The identified knowledge, understanding and skills are not exhaustive and may be expanded upon or tailored to particular contexts to which the unit is being taught and the assessment criteria applied.

We recommend that teaching and development of subject content and associated skills be referenced to real vocational situations, through the utilisation of appropriate industrial contact, vocationally experienced delivery personnel, and real life case studies.

All the learning outcomes and assessment criteria must be clearly evidenced in the submitted work, which is externally moderated by OCR.

Results will be Pass or Fail.

## Guidance on assessment

---

Candidates do not have to achieve units in any particular order and tutors should tailor learning programmes to meet individual candidate needs. It is recommended that, wherever possible, centres adopt a holistic approach to the delivery of the qualification and identify opportunities to link the units.

Centres are free to deliver this qualification using any mode of delivery that meets the needs of their candidates. Whatever mode of delivery is used, centres must ensure that learners have access to appropriate resources and consider the candidates' complete learning experience when designing learning programmes. This is particularly important in relation to candidates studying part time alongside real work commitments where candidates may bring with them a wealth of experience that should be utilised to maximum effect by tutors and assessors.

It is difficult to give a detailed answer to how much evidence is required as it depends on the type of evidence collected and the judgement of assessors. The main principles, however, are as follows: for a candidate to be judged competent in a unit, the evidence presented must satisfy:

- all the items listed, in the section 'Learning Outcomes'
- all the areas in the section 'Assessment Criteria'

Questioning the candidate is normally an ongoing part of the assessment process, and is necessary to:

- test a candidate's knowledge of facts and procedures
- check if a candidate understands principles and theories *and*
- collect information on the type and purpose of the processes a candidate has gone through
- candidate responses must be recorded

The quality and breadth of evidence provided should determine whether an assessor is confident that a candidate is competent or not. Assessors must be convinced that candidates working on their own can work independently to the required standard.

## Additional information

---

For further information regarding administration for this qualification, please refer to the OCR document '*Admin Guide: Vocational Qualifications*' on the OCR website [www.ocr.org.uk](http://www.ocr.org.uk) .
